MB-500 Download | Reliable MB-500 Exam Test

If you want to pass your MB-500 exam and get the MB-500 certification which is crucial for you successfully, I highly recommend that you should choose the MB-500 certification preparation materials from our company so that you can get a good understanding of the MB-500 Exam that you are going to prepare for. We believe that if you decide to buy the MB-500 exam materials from our company, you will pass your exam and get the MB-500 certification in a more relaxed way than other people.

Microsoft Dynamics 365: Finance and Operations Apps Developer Sample Questions (Q217-Q222):

NEW QUESTION # 217

A company implements Dynamics 365 finance and operations apps.

You are developing code to consume OData service endpoints. You complete the application registration process and gather the details required to create a C# console application.

You need to ensure that the console application interacts with Dynamics 365 Finance OData services.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

Add the custom OData service endpoints in the ODataClient list.

Add the OData v4 client code generator.

Point the MetadataDocumentUri variable to the Dynamics 365 Finance instance.

Generate proxy classes.

Answer Area

Answer:

Explanation:

Actions

- Add the custom OData service endpoints in the ODataClient list.
- Add the OData v4 client code generator.
- Point the MetadataDocumentUri variable to the Dynamics 365 Finance instance.
- Generate proxy classes.

Answer Area

- Add the OData v4 client code generator.
- Add the custom OData service endpoints in the ODataClient list.
- Point the MetadataDocumentUri variable to the Dynamics 365 Finance instance.

Explanation

Graphical user interface, text, application Description automatically generated

Add the OData v4 client code generator.

Add the custom OData service endpoints in the ODataClient list.

Generate proxy classes.

Point the MetadataDocumentUri variable to the Dynamics 365 Finance instance.

Step 1: Add the OData v4 client code generator

Install OData Client Code Generator

Step 2: Add the custom OData service endpoints to the ODataClient list

After you downloaded, installed the OData V4 Client Code Generator and restart the Visual Studio you will be able to find and add 'OData Client' item into our project.

Step 3: Generate proxy classes

Step 4: Point the MetadataDocumentUri variable to the Dynamics 365 Finance instance You need to set MetadataDocumentUri, which is generated by the OData Code Generator.

NEW QUESTION # 218

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

You must extend the class SalesLineType and add a new method that returns the day of week for the system's current date as an integer value. You need to create a class that extends SalesLineType and adds the new method.

Solution: You create the following code:

```
[ExtensionOf(classStr(SalesLineType))]  
public class mySalesLineType_Extension  
{  
    public static int ExtensionMethodDayOfWeek()  
    {  
        return dayOfWeek(systemDateGet());  
    }  
}
```

Does the solution meet the goal?

- A. No
- B. Yes

Answer: A

NEW QUESTION # 219

A company uses Dynamics 365 Finance.

You must use QueryBuilder classes to implement a query that loops through all customers for whom the customer group equals EXT. You need to implement the query. You declare and initialize a query Object.

You need to run the query.

in which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

Actions

1. Declare a QueryBuildRange object and add a range for the CustGroup field on the QueryBuildDataSource.
2. Declare a QueryBuildDataSource object. Call the addDataSource method on the query object and assign it to the QueryBuildDataSource by using CustTable.
3. Add a value to range for the CustGroup EXT to the QueryBuildRange object.
4. Loop through the QueryRun object by using the Next method.
5. Declare and initialize the QueryRun object by using the query object.

Answer area

- 1
- 2
- 3
- 4
- 5

Answer:

Explanation:

Actions

1. Declare a QueryBuildRange object and add a range for the CustGroup field on the QueryBuildDataSource.
2. Declare a QueryBuildDataSource object. Call the addDataSource method on the query object and assign it to the QueryBuildDataSource by using CustTable.
3. Add a value to range for the CustGroup EXT to the QueryBuildRange object.
4. Loop through the QueryRun object by using the Next method.
5. Declare and initialize the QueryRun object by using the query object.

Answer area

1. Declare a QueryBuildDataSource object. Call the addDataSource method on the query object and assign it to the QueryBuildDataSource by using CustTable.
2. Add a value to range for the CustGroup EXT to the QueryBuildRange object.
3. Loop through the QueryRun object by using the Next method.
4. Declare and initialize the QueryRun object by using the query object.

Explanation

Actions

1. Declare a QueryBuildRange object and add a range for the CustGroup field on the QueryBuildDataSource.

Answer area

1. Declare a QueryBuildDataSource object. Call the addDataSource method on the query object and assign it to the QueryBuildDataSource by using CustTable.
2. Add a value to range for the CustGroup EXT to the QueryBuildRange object.
3. Loop through the QueryRun object by using the Next method.
4. Declare and initialize the QueryRun object by using the query object.

NEW QUESTION # 220

You need to deploy the web portal integration solution.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Import the model into the Build environment.
- Build and create a deployment package.
- Import the deployment package in another development environment.
- Add the package to source control and check in changes.
- Import the model into a QA environment.
- Import the model into a Development environment.
- Synchronize the models in the Developer environment by using Get latest feature.

Answer area

Navigation arrows: > < (between areas) and < > (within answer area)

Answer:

Explanation:

Answer Area

- Import the deployment package in .mother development environment.
- Add the package to source control and check in changes.
- Import the model into a QA environment.
- Import the model into a Development environment.

- 1 - Import the deployment package in .mother development environment.
- 2 - Add the package to source control and check in changes.
- 3 - Import the model into a QA environment.
- 4 - Import the model into a Development environment.

NEW QUESTION # 221

An organization has two million customers that are part of the International customer group.

Validation must occur when customer records are updated. For all customers where the value of the customer group field is international, you must the delivery mode to Air.

You need to update the customer records.

Which two segments can you use? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

```

A. ttsbegin;
   while select forupdate CustTable
   where CustTable.CustGroup == 'International'
   {
       CustTable.DlvMode = 'Air';
       CustTable.update();
   }
   ttscommit;
B. ttsbegin;
   update CustTable
   set DlvMode = 'Air';
   where CustTable.CustGroup == 'International'
   ttscommit;
C. ttsbegin;
   update_recordset CustTable
   where CustTable.CustGroup == 'International'
   setting DlvMode = 'Air';
   ttscommit;

```

```

D. ttsbegin;
   while select forupdate CustTable
   where CustTable.CustGroup == 'International'
   {
       CustTable.DlvMode = 'Air';
       CustTable.doUpdate();
   }
   ttscommit;
E. ttsbegin;
   update_recordset CustTable
   setting DlvMode = 'Air';
   where CustTable.CustGroup == 'International'
   ttscommit;

```

- A. Option A
- B. Option B
- C. Option D
- D. Option C
- E. Option E

Answer: A,E
