Ample Study Material for Splunk SPLK-1002 Exam Questions - Attain Exam Success

A second format is a SPLK-1002 web-based practice exam that can take for self-assessment. However, it differs from desktop-based SPLK-1002 practice exam software as it can be taken via any browser, including Chrome, Firefox, Safari, and Opera. This Splunk SPLK-1002 web-based practice exam does not require any other plugins. You can take this SPLK-1002 self-assessment test on Windows, iOS, Linux, Mac, and Android. It also includes all of the functionalities of desktop SPLK-1002 software and will assist you in passing the SPLK-1002 certification test.

Splunk Core Certified Power User Exam Sample Questions (Q167-Q172):

NEW QUESTION # 167
What happens to the original field name when a field alias is created?

- A. The original field name is replaced by the field alias within the index.
- B. The original field name is not affected by the creation of a field alias.
- C. The original field name is italicized to indicate that it is not an alias.
- D. The original field name still exists in the index but is not visible to the user at search time.

Answer: B

Explanation:
Creating a field alias in Splunk does not modify or remove the original field. Instead, the alias allows the same data to be accessed using a different field name without affecting the original field.

NEW QUESTION # 168
What does the Splunk Common Information Model (CIM) add-on include? (select all that apply)

- A. Custom visualizations
- B. Pre-configured data models
- C. Automatic data model acceleration
- D. Fields and event category tags

Answer: B,D

Explanation:
The Splunk Common Information Model (CIM) add-on is a collection of pre-built data models and knowledge objects that help you normalize your data from different sources and make it easier to analyze and report on it3. The CIM add-on includes pre-configured data models that cover various domains such as Alerts, Email, Database, Network Traffic, Web and more3. Therefore, option B is correct. The CIM add-on also includes fields and event category tags that define the common attributes and labels for the data models3. Therefore, option C is correct. The CIM add-on does not include custom visualizations or automatic data model acceleration. Therefore, options A and D are incorrect.

NEW QUESTION # 169
If a search returns _____ it can be viewed as a chart.

- A. keywords
- B. timestamps
- C. events
- D. statistics

Answer: D

Explanation:
Explanation
If a search returns statistics, it can be viewed as a chart2. Statistics are tabular data that show the relationship between two or more fields2. You can create statistics by using commands such as stats, chart or timechart2. You can view statistics as a chart by selecting the Visualization tab in the Search app and choosing a chart type such as column, line or pie2. Therefore, option B is correct, while options A, C and D are incorrect because they are not types of data that can be viewed as a chart.

NEW QUESTION # 170
Which of the following statements about tags is true? (select all that apply.)

- A. Tags are case-insensitive.
- B. Tags are based on field/vale pairs.
- C. Tags categorize events based on a search.
- D. Tags are designed to make data more understandable.

Answer: B,D

Explanation:
The following statements about tags are true: tags are based on field/value pairs and tags categorize events based on a search. Tags are custom labels that can be applied to fields or field values to provide additional context or meaning for your data. Tags can be used to filter or analyze your data based on common concepts or themes. Tags can be created by using various methods, such as search commands, configuration files, user interfaces, etc. Some of the characteristics of tags are:
Tags are based on field/value pairs: This means that tags are associated with a specific field name and a specific field value. For example, you can create a tag called "alert" for the field name "status" and the field value "critical". This means that only events that have status=critical will have the "alert" tag applied to them.
Tags categorize events based on a search: This means that tags are defined by a search string that matches the events that you want to tag. For example, you can create a tag called "web" for the search string sourcetype=access_combined. This means that only events that match the search string sourcetype=access_combined will have the "web" tag applied to them.
The following statements about tags are false: tags are case-insensitive and tags are designed to make data more understandable. Tags are case-sensitive and tags are designed to make data more searchable. Tags are case-sensitive: This means that tags must match the exact case of the field name and field value that they are associated with. For example, if you create a tag called "alert" for the field name "status" and the field value "critical", it will not apply to events that have status=CRITICAL or Status=critical. Tags are designed to make data more searchable: This means that tags can help you find relevant events or patterns in your data by using common concepts or themes. For example, if you create a tag called "web" for the search string sourcetype=access_combined, you can use tag=web to find all events related to web activity.

NEW QUESTION # 171

Using the export function, you can export search results as _____.(Select all that apply)

- A. Html
- B. Xml
- C. Json
- D. A php file

Answer: B,C

NEW QUESTION # 172

......
