Which two questions are important to ask to determine if Media Cloud Advertising Sales Management (ASM) is a good fit to replace the existing system?

Choose 2 answers

- A. What are the dimensions for all digital ad formats for the publisher?
- B. Which types of ad products are included in media plans?
- C. Which type of marketing automation system is in use?
- D. Which ad servers does the system need to connect to for campaign booking?

**Answer: B,D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

#### NEW QUESTION # 49

A publisher is working with Agents, which is Home's agency, to advertise Home's products.

How should a Consultant create and relate these records in Advertising Sales Management (ASM)?

- A. Create a Home Account and create an Agents Account with an Agency Record Type.
- B. Create a Home Account and create an Agents Account with a Brand Record Type.
- C. Create Home and Agents as Accounts without specific Record Types.
- D. Create a Home Account and Agents as a Contact on the Home Account.

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In Media Cloud ASM, Advertisers and Agencies are modeled as Accounts with different Record Types. The agency should be an Account with the Agency Record Type to reflect its role properly in the hierarchy and relationships. Contacts belong to Accounts but Agencies are best represented as distinct Account records for clarity and reporting. Brand Record Type is typically used for product branding, not agencies.

During proposal line item creation, a Consultant needs to be able to select a value for a picklist type attribute. Which non-overridable behavior must the Consultant select during the assignment to the parent object type?

- A. Run-time Configurable
- B. Is Not Assetizable
- C. Is Not Translatable
- D. Is Encrypted

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Run-time Configurable behavior allows the picklist values to be determined dynamically during runtime rather than being statically assigned. This is critical in proposal line items to select picklist values that may change or depend on other variables dynamically. The other options either disable functionality (Is Not Assetizable), restrict translations, or encrypt values but do not allow dynamic selection.
