

# Latest C\_CPI\_2506 Study Materials: SAP Certified Associate - Integration Developer - Valid SAP Reliable C\_CPI\_2506 Test Sample

What's more, part of that Dumpsxams C\_CPI\_2506 dumps now are free: <https://drive.google.com/open?id=1NLWTb5DxYiEvXkt2McBNshwAraxnR48>

Preparing for the C\_CPI\_2506 exam can be a daunting task, but with real C\_CPI\_2506 exam questions, it can be a lot easier. The importance of actual SAP Certified Associate - Integration Developer (C\_CPI\_2506) questions cannot be overemphasized. C\_CPI\_2506 Real Questions are crucial for passing the C\_CPI\_2506 exam. When candidates have access to the updated SAP C\_CPI\_2506 practice test questions, they are better prepared to succeed.

## SAP C\_CPI\_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.</li></ul>

Pass Guaranteed Quiz SAP - C\_CPI\_2506 –Reliable Latest Study Materials

It will provide them with the C\_CPI\_2506 exam pdf questions updates free of charge if the C\_CPI\_2506 certification exam issues the latest changes. If you work hard using our top-rated, updated, and excellent SAP C\_CPI\_2506 PDF Questions, nothing can refrain you from getting the SAP C\_CPI\_2506 certificate on the maiden endeavor.

## SAP Certified Associate - Integration Developer Sample Questions (Q28-Q33):

### NEW QUESTION # 28

What is the relationship between an API provider and an API proxy in the API Management capability within SAP Integration Suite?

- A. The API provider manages secure API access for an API proxy.
- B. The API provider provides a unique URL for an API proxy.
- C. The API proxy provides a unique URL and acts as a proxy for the API provider.

**Answer: C**

Explanation:

An API proxy is an API that acts as a proxy for another API, which is usually the backend service that provides the actual functionality. An API proxy can be used to add security, monitoring, caching, transformation, and other features to the backend API. An API provider is a logical grouping of APIs that share a common connection to the backend service. An API provider can be used to discover and import APIs from the backend service into the API Management capability within SAP Integration Suite. The relationship between an API provider and an API proxy is that the API proxy uses the API provider as a source of information and configuration for accessing the backend service. The API proxy also provides a unique URL that can be used by clients to invoke the API without exposing the details of the backend service. Reference: SAP Integration Suite | SAP Community, Create an API Proxy | SAP Tutorials

### NEW QUESTION # 29

In the SAP Integration Suite, where can you change the virtual host name?

- A. Discover - APIs
- B. Settings APIs
- C. Design APIs
- D. Configure ? APIs

**Answer: B**

Explanation:

In the SAP Integration Suite, you can change the virtual host name in the Settings APIs. The Settings APIs allow you to configure various aspects of your API provider, such as the virtual host name, the base path, the authentication method, and the CORS settings. Reference: Integration Software | SAP Integration Suite, Modernize Integration with SAP Integration Suite | openSAP

### NEW QUESTION # 30

What must you do to find out which entity sets are available in the OData V2.0 interface?

- A. Contact the OData interface manufacturer.
- B. Retrieve the service document from the interface.
- C. Search in the Global Directory of all available OData interfaces.
- D. Retrieve the metadata document from the interface.

**Answer: D**

Explanation:

In SAP Integration Development, particularly when working with OData V2.0 interfaces, the correct way to identify the available entity sets is by retrieving the metadata document from the OData service. The metadata document, accessible via the \$metadata endpoint of the OData service, provides a comprehensive description of the service's data model, including all entity sets, entity types, properties, associations, and navigation properties. This document is formatted in XML (CSDL - Conceptual Schema Definition Language) and is essential for understanding the structure and capabilities of the OData service.

Why Option B is Correct:

\* **Metadata Document Role:** The metadata document is a standard feature of OData V2.0 services, as defined by the OData protocol. It exposes the schema of the service, listing all entity sets and their properties. For example, accessing [https://<service-uri>/\\$metadata](https://<service-uri>/$metadata) returns an XML document detailing the entity sets, such as Customers, Orders, or other resources exposed by the service.

\* **SAP Reference:** According to SAP documentation, such as the SAP Gateway Developer Guide and OData V2.0 Protocol Specification, the metadata document is the primary source for discovering the structure of an OData service. In SAP Gateway, which is commonly used for OData services in SAP environments, the \$metadata endpoint is automatically generated when an OData service is created using the Service Builder (transaction SEGW).

\* **Practical Usage:** In SAP Integration Suite or SAP Cloud Integration, developers use the metadata document to configure integration flows (iFlows) that interact with OData services. Tools like SAP Business Application Studio or Eclipse with SAP plugins allow developers to import this metadata to generate client code or configure adapters.

Why Other Options are Incorrect:

\* **A. Retrieve the service document from the interface:** The service document (accessed via the root URL of the OData service, e.g.,

\* **C. Search in the Global Directory of all available OData interfaces:** There is no such thing as a "Global Directory" for OData interfaces in SAP or the broader OData ecosystem. OData services are specific to individual systems or applications, and their discovery is typically done via the service's metadata or service document, not a centralized directory.

\* **D. Contact the OData interface manufacturer:** This option is not practical or standard. OData is a protocol, not a product with a "manufacturer." The metadata document is the standard, self-contained way to explore an OData service, and no external contact is required.

SAP Integration Developer Workflow Example:

\* **Access the OData Service:** In an SAP environment, an Integration Developer identifies the OData service URL (e.g., [https://<host>:<port>/sap/opu/odata/sap/<service\\_name>](https://<host>:<port>/sap/opu/odata/sap/<service_name>)).

\* **Retrieve Metadata:** Append / \$metadata to the service URL to download the metadata XML. For example, [https://<host>:<port>/sap/opu/odata/sap/ZCUSTOMER\\_SRV/\\$metadata](https://<host>:<port>/sap/opu/odata/sap/ZCUSTOMER_SRV/$metadata).

\* **Analyze Entity Sets:** Parse the <EntitySet> elements in the metadata XML to identify available entity sets, their properties, and navigation paths.

\* **Use in Integration:** In SAP Cloud Integration, import the metadata into an iFlow's OData adapter to configure operations like querying or updating specific entity sets.

References:

SAP Help Portal: SAP Gateway Developer Guide - "OData Service Metadata" section, which explains the role of the \$metadata endpoint in exposing entity sets and their schema.

OData V2.0 Specification: Section 2.2.3.7.1, "Metadata Document," which mandates that OData services provide a metadata document describing entity sets and other resources.

SAP Integration Suite Documentation: "OData Adapter" section, which details how metadata is used to configure integration flows for OData services.

SAP Community Blogs: Articles on OData development in SAP Gateway, such as "Building OData Services with SAP Gateway," emphasize using the metadata document for service exploration.

## NEW QUESTION # 31

Which combination of SAP BTP role collections allows a user to manage queues and topic subscriptions in SAP Event Mesh, and monitor its usage and resources?

- A. SecurityAdmin and SecurityDevelop
- **B. EventMeshAdmin and EventMeshDevelop**
- C. ApplicationAdmin and ApplicationDevelop
- D. IntegrationAdmin and IntegrationDevelop

**Answer: B**

Explanation:

In SAP BTP, SAP Event Mesh provides messaging capabilities (queues, topics, and subscriptions) that require specific role collections to enable developers and administrators to perform tasks. SAP delivers two dedicated role collections for Event Mesh: EventMeshDeveloper:

Manages queues and topic subscriptions

Monitors Event Mesh and its queues

Performs testing of queues and message flows

EventMeshAdmin:

Includes all developer capabilities

Provides additional administration rights for lifecycle management of Event Mesh instances and configurations. When a user is assigned these role collections, they gain the ability to:

Create and manage queues and topic subscriptions.

Monitor usage and resources such as queue depth, consumers, connections, and spool size within Event Mesh.

Other provided options are incorrect:

ApplicationAdmin/ApplicationDevelop # These are not SAP Event Mesh role collections, they do not provide queue or topic subscription access.

SecurityAdmin/SecurityDevelop # These roles are tied to security configurations and do not allow Event Mesh operations.

IntegrationAdmin/IntegrationDevelop # These roles belong to SAP Integration Suite (Cloud Integration) capability, not Event Mesh. Therefore, the correct and verified answer according to SAP Integration Developer documentation is:

B). EventMeshAdmin and EventMeshDevelop

## NEW QUESTION # 32

You want to use an HTTPS endpoint from an integration flow. In which of the following must you use the HTTP client?

- A. SAP Integration Suite, advanced event mesh
- B. API Management capability within SAP Integration Suite
- **C. Open Connectors capability within SAP Integration Suite**
- D. SAP Business Application Studio

**Answer: C**

Explanation:

To use an HTTPS endpoint from an integration flow, you can use the Open Connectors capability within SAP Integration Suite. Open Connectors is a feature that allows you to connect to over 160 third-party applications using standardized and normalized APIs. You can use the HTTP client connector to make HTTP or HTTPS requests to any endpoint that supports these protocols. You can configure the HTTP client connector with various parameters, such as URL, method, headers, query parameters, body, and authentication. Reference: Open Connectors | SAP Help Portal, HTTP Client Connector | SAP Help Portal

## NEW QUESTION # 33

.....

We offer you free update for 365 days after purchasing C\_CPI\_2506 study guide, so that you don't need to spend extra money on the update version, and latest version for C\_CPI\_2506 exam materials will be sent to your email address automatically. In addition, C\_CPI\_2506 exam dumps are compiled by professional experts who are quite familiar with the exam center, therefore if you choose us, you can get the latest information for the exam timely. C\_CPI\_2506 Exam Materials are also high quality, we have a professional team to examine the answers on a continuous basis, and therefore, you can use them at ease.
