最新的 UiPath Certified UiAAv1 免費考試真題 (Q18-Q23):

問題 #18

Scenario: A Citrix Administrator created a machine catalog using Machine Creation Services. The Desktop Experience was set to 'Randoml.

Where will the unique information for the virtual machines be stored?

- A. In the differencing disk of each virtual machine
- B. In the PERSONALITY.INI file at the root directory of each virtual machine
- C. Only in the Site database
- **D. In the identity disk of each virtual machine**

答案：D

問題 #19

Which tool should a Citrix Administrator use to monitor the overall daily performance of a Citrix Virtual Apps and Desktops Site?

- A. HDX Monitor
- B. Citrix Studio
- C. CDF Traces
- **D. Citrix Director**

答案： D

解題說明：

Citrix Director is the monitoring and management tool designed for Citrix Virtual Apps and Desktops. It provides administrators with daily performance insights, including logon times, session usage, resource utilization, and alerts, making it the correct tool for overall site performance monitoring.

問題 #20

Which two steps are correct when creating a master image prior to machine catalog creation?
(Choose two.)

- A. Verify that the hard disk is attached at device location 1.
- **B. Install and configure the Virtual Delivery Agent (VDA) software.**
- **C. Generalize the image using the Microsoft sysprep tool.**
- D. Create a master virtual machine and then install the operating system.

答案： B,C

解題說明：

Before creating a machine catalog, the master image must be generalized with Sysprep to prepare it for cloning, and the Virtual Delivery Agent (VDA) software must be installed and configured so the machines can register with the Delivery Controllers.

問題 #21

Scenario: A Citrix Administrator needs to gather historical reporting statistics from the Virtual Delivery Agent (VDA) machines, as users are reporting latency and overall performance issues within their sessions. The administrator believes these issues are related to high CPU and memory usage. What can the administrator enable to gather this monitoring data from the VDA machines?

- A. Trends > Machine Usage within Citrix Director
- B. Process Monitoring HDX policy in Citrix Studio
- C. Trends > Sessions within Citrix Director
- **D. Resource Monitoring HDX policy in Citrix Studio**

答案： D

解題說明：

Enabling the Resource Monitoring HDX policy allows collection of CPU and memory utilization data from VDA machines. This data is then sent to Citrix Director for historical reporting, helping administrators analyze performance issues such as latency caused by high resource usage.

問題 #22

Scenario: A Citrix Administrator maintains a Citrix Virtual Apps and Desktops Site with a number of network print servers being used for all users. Currently, the print servers use native Windows drivers. No client printers are being used. New company guidelines require a reduction in the number of native drivers being used within the Site infrastructure. Which step can the administrator take to meet the new company guidelines?

- A. Install the Universal Print Server on all print servers in the Site and leave the default Universal printer driver usage policy setting.
- B. Enable the Citrix Universal Print Driver (EMF) driver and leave the default Universal printer driver usage policy setting.
- C. Configure the Citrix Universal Generic Printer and update the Auto-create generic universal printer policy setting.
- **D. Install the Universal Print Server on all print servers in the Site and update the Universal printer driver usage policy setting.**

答案： D

解題說明:

By installing the Citrix Universal Print Server and configuring the Universal printer driver usage policy, print servers can use the Citrix Universal Print Driver instead of multiple native Windows drivers. This reduces the number of drivers in the environment while ensuring centralized network printing remains functional.
