

Verified HP HPE7-A03: Reliable Aruba Certified Campus Access Architect Exam Exam Blueprint - Professional BraindumpStudy HPE7-A03 Valid Exam Experience

What's more, part of that BraindumpStudy HPE7-A03 dumps now are free: https://drive.google.com/open?id=1cUHzQ-dxDZbDaU_ON3RWbqH9EykbQ

We have created a number of reports and learning functions for evaluating your proficiency for the Aruba Certified Campus Access Architect Exam (HPE7-A03) exam dumps. In preparation, you can optimize Aruba Certified Campus Access Architect Exam (HPE7-A03) practice exam time and question type by utilizing our HP HPE7-A03 Practice Test software. BraindumpStudy makes it easy to download HP HPE7-A03 exam questions immediately after purchase. You will receive a registration code and download instructions via email.

Three HPE7-A03 exam questions formats that we have are Aruba Certified Campus Access Architect Exam (HPE7-A03) dumps PDF format, web-based HPE7-A03 practice exam and desktop-based HPE7-A03 practice test software. Our HP HPE7-A03 PDF dumps format has actual HPE7-A03 Questions which are printable and portable. Hence, you can go through these HPE7-A03 questions via your smart devices like smartphones, laptops, and tablets.

HP HPE7-A03 Valid Exam Experience | HPE7-A03 Valid Exam Topics

If you choose our HPE7-A03 test engine, you are going to get the certification easily. As you can see the data on our website, there are tens of thousands of our worthy customers who have passed the exam and achieved their certification with the help of our HPE7-A03 learning guide. Just make your choice and purchase our HPE7-A03 study materials and start your study right now! Knowledge, achievement and happiness are waiting for you!

HP Aruba Certified Campus Access Architect Exam Sample Questions (Q52-Q57):

NEW QUESTION # 52

You are presenting your network design solution to your customer. What is important to include in your presentation?

- A. tangible and intangible returns for the customer
- B. your experience with this kind of project

- C. your rollback plan
- D. protocols that will be used to make your solution work

Answer: A

Explanation:

When presenting a network design solution to a customer, it is crucial to focus on the benefits that the solution will bring to their business. This includes both tangible returns, such as cost savings, increased efficiency, and improved performance, and intangible returns, such as enhanced security, scalability, and user satisfaction. Highlighting how the solution addresses the customer's specific needs and challenges, and how it aligns with their business objectives, helps in demonstrating the value of the solution and facilitates decision-making. Including tangible and intangible returns in the presentation makes it more compelling and relevant to the customer's business goals, thereby increasing the likelihood of the proposal's acceptance.

NEW QUESTION # 53

identify the stakeholders when gathering information for the network design and new IDF/MDF design.
(Select two.)

- A. Help desk manager
- B. Chief Financial Officer
- C. Network Operations manager
- D. Facility manager

Answer: A,C

Explanation:

When designing a network and considering new Intermediate Distribution Frame/Main Distribution Frame (IDF/MDF) deployments, it's essential to gather information from various stakeholders to ensure the design meets all operational and organizational requirements. According to Aruba Campus Access learning resources, the Help Desk Manager and Network Operations Manager are crucial stakeholders in this process. The Help Desk Manager provides insights into common issues, user complaints, and service requests, which can influence network design decisions to improve user experience and operational efficiency. The Network Operations Manager, on the other hand, offers a technical perspective on network management, maintenance requirements, and operational challenges. Engaging with these stakeholders ensures that the network design is aligned with both user needs and technical operational standards, contributing to a more resilient, efficient, and user-friendly network infrastructure.

NEW QUESTION # 54

XYZ Regional Hospital is an integrated healthcare system of Hospitals, neighborhood health centers, and small doctor offices. XYZ Regional Hospital has recently merged with 1x neighborhood health centers and 125 doctor branch offices. The wireless, wired access, and AAA solutions are outdated and need to be replaced.

XYZ Regional Hospital is looking to future-proof and improve efficiency across all sites by enhancing wired and wireless access and migrating to a centralized and unified wired/wireless and policy management that can provide uninterrupted availability of all systems.
Locations:

- XYZ Regional Hospital is located in New York City
- Dila Health Center is located in City A
- Mount Health Center is located in City B
- Rock Health Center is located in City C
- Branch clinics are located at different locations across the United States Requirements:
- Provide, via management software, one single pane of glass to manage wired and wireless LANs, and VPNs across campus, branch, and remote via web/cloud architecture providing near real-time insight, troubleshooting tools, and service Level performance reporting.
- Seamless integration across wired, wireless. WAN, SO-Branch. IoT
- * Provide secure wireless access to all the employees of (he Regional Hospital and partners, as well as provide wireless Internet access to medical citizens when they visit our facilities.
- All-access points must support the following features and specifications: 802.11ax (Wi-Fi 6E Certified)
- Security options including WPA3. 802.1X with Radius secure authentication
- Identify and authenticate every wireless and wired device
- End-to-end role-based security
- Seamless mobility across the hospital for medical teams, patients, and visitors
- Cuts Wi-Fi deployment times from days to hours and enables Zero-Touch deployments across the site
- Establishes a resilient, future-ready network infrastructure with the intelligence, scalability, and intuitive toolsets to meet emerging

needs

- Fully redundant branch solution with dynamic path selection to the hospital XYZ Regional Hospital is looking for an NAC solution to address its security challenges-Requirements:
- fully redundant NAC solution for management and authentication
- wireless and wired authentication for the main hospital will be handled locally
- wireless and wired authentication for the health centers will be handled locally
- wireless and wired authentication for the clinics will be authenticated against the main hospital NAC
- staff users/devices should be able to visit any site and have the same experience
- support 35k devices

Locations:

- XYZ Regional Hospital is located in City 1 - 15k devices
 - Dila Health center is located in City 2 - 8k devices
 - Mount Health Center is located in City 3 - 5k devices
 - Rock Health Center is located in City 4 - 4k devices
 - 125 branch clinics are located at different locations across the US - 2k devices
- Which solution meets the customer's requirements?

- A.
 - 1x 3010 as a Publisher for the main DC
 - 1x 3010 as a Standby Publisher for the DR
 - 2x 3010 as Subscribers for the Main Hospital
 - 2x C2020 as Subscribers for the Dila Health Center
 - 2x C2020 as Subscribers for the Mount Health Center
 - 2x C2020 as Subscribers for the Rock Health Center
- B.
 - 1x 3010 as a Publisher for the main DC
 - 1x 3010 as a Standby Publisher for the DR
 - 2x 3010 as Subscribers for the Main Hospital
 - 2x C1000 as Subscribers for the Dila Health Center
 - 2x VMs as Subscribers for the Mount Health Center
 - 2x C2020 as Subscribers for the Rock Health Center
 - 15k + 10k Access licenses
- C.
 - 1x 3010 as a Publisher for the main DC
 - 1x C2020 as a Standby Publisher for the DR
 - 2x C2020 as Subscribers for the Main Hospital
 - 2x C1000 as Subscribers for the Dila Health Center
 - 2x C1000 as Subscribers for the Mount Health Center
 - 2x VMs as Subscribers for the Rock Health Center
 - 15k + 10k Access licenses
- D.
 - 1x C3010 as a Publisher for the main DC
 - 1x C3010 as a Standby Publisher for the DR
 - 2x C3010 as Subscribers for the Main Hospital
 - 2x C1000 as Subscribers for the Dila Health Center
 - 2x VMs as Subscribers for the Mount Health Center
 - 2x VMs as Subscribers for the Rock Health Center
 - 35k Access licenses

Answer: D

Explanation:

Option B in the provided selections outlines a configuration that includes an Aruba ClearPass Policy Manager as a Publisher for the main DC and as a Standby Publisher for the DR, with subscriber servers allocated to the main hospital and health centers. This setup is likely to match the requirement for a fully redundant NAC solution, with local handling of authentication for the main hospital and health centers, and centralized authentication for the clinics. The inclusion of VMs (Virtual Machines) as subscribers for health centers suggests scalability and flexibility for future expansion. The provision of 35k access licenses aligns with the support for 35k devices across all locations.

NEW QUESTION # 55

A global cruise line company needs to refresh its current fleet. They will refresh the insides' of the ship to be cost-effective and increase their sustainability. They will replace the complete WLAN/LAN hardware of the ship. In this refresh, the company will not refresh its current security requirements. The CIO also wants to limit the number of unused ports in the switches. Future expansion will always mean a refresh of hardware.

They start with the smallest ship with a maximum of 800 guests

Each ship has a LAN infrastructure consisting of two core switches, up to 10 redundant distribution switches, and up to 500 access switches (400 cabins, 100 technical rooms). The Core switches are located in the MDF of the ship and the distribution switches are located in the IDFs of the ship. Each cabin and technical room gets one single access switch.

The cabling structure of the ship will not be refreshed. Each IDF is connected to the MDF by SMF, of which two pairs are available for the interconnect between the core and distribution. The length of SM fiber between MDF and IDF is less than 300 meters (930 ft) and the type used is OS1. Each cabin is connected by a single

OM2 pair to the IDF, the maximum length is 60 meters (200 ft). Each technical room is connected by a single OM2 pair to the IDF, with lengths between 100 and 150 meters (320 and 500 ft).

For each cabin/technical room the customer is looking to replace their current fan-less 2530/2540 without changing the requirements, except they need to upgrade the uplink to distribution switch to 10GbE to handle the increased network traffic, and the

technical rooms need redundant power.

The WLAN infrastructure will be 1:1 refreshed without new cabling or new AP locations. Their WLAN Infrastructure is based on the 200/300 series Indoor and outdoor APs running InstantOS (less than 300 APs).

The customer has no change in WLAN requirements.

The cruise line company will replace its current Internet connection before the LAN/WLAN refresh. The new Internet connection will provide a 99.8% uptime, which is needed to ensure the paid guest Wi-Fi is always operational. With this new Internet connection, the CIO of the cruise line wants to base the design on the ESP architecture from Aruba because Internet connection is guaranteed.

The week after the presentation of your design to the CIO of the cruise line company, the CIO calls you to discuss increasing the security of the wired network infrastructure. Since one of their competitors had one of their cruise ships cyber hacked, the CSO of the cruise line has mandated increased security on the wired network. They have heard about dynamic segmentation and central and decentral overlay networks.

What would you advise as the most cost-efficient solution?

- A. Standardize on Aruba 6100 switches for the access layer, add a cluster of 9240 GWs. and Implement central overlay networks on UBT basis.
- **B. Standardize on Aruba 6300 switches for the access layer, add a cluster of 9240 GWs. and Implement central overlay networks on UBT basis.**
- C. Standardize on Aruba 6000 switches for the access layer, add a cluster of 9240 GWs. and Implement central overlay networks on UBT basis.
- D. Standardize on Aruba 6200 switches for the access layer, add a cluster of 9240 GWs. and Implement central overlay networks on UBT basis.

Answer: B

Explanation:

Given the need to increase the security of the wired network infrastructure while being cost-efficient, advising the cruise line company to standardize on Aruba 6300 switches for the access layer is the most appropriate solution. The Aruba 6300 Series offers advanced features suitable for such environments, including high-performance, scalability, and enhanced security capabilities. Adding a cluster of 9240 Gateways for implementing central overlay networks on a User-Based Tunneling (UBT) basis further strengthens the network's security posture. This setup supports dynamic segmentation, which allows for the enforcement of consistent policies and secure access across the network, irrespective of the user or device type. This architecture not only meets the increased security requirements set forth by the cruise line's CSO but also aligns with the company's existing infrastructure and future refresh plans, ensuring cost-efficiency and sustainability.

NEW QUESTION # 56

A global furniture retail company called 'No-Stair Inc.' requests you design their new WLAN infrastructure for a global footprint. Each location of No-Stair Inc. has a similar layout: three small manager offices, a warehouse, and a 'retail' area. The 'retail' area and the warehouse together amount to 95% of the location. The IT department of the company is minimally engaged in their LAN refresh so the CTO of the company has shared the information below. Current WLAN Infrastructure is based on the 802.11n "WIFI4Less" access-points series (both model

2013-INT (2.4 GHz only internal antenna) and model 2019-EXT (dual-band external antenna only)). These AP models are standalone without any centralized management. Last year 'No-Stair Inc.' ran a project called 'Secure' to ensure that all needed network security was implemented to be fully compliant with their security standards. During this project, they also upgraded the AAA infrastructure to handle the increased AAA requests. No additional Wi-Fi or security requirements are listed for this WLAN refresh, which means that

'No-Stair Inc.' will continue to use bridged SSIDs with local breakout into different VLANs.

The CTO of No-Stair Inc. understands the need for you to ask additional questions to deliver the design. The questions may be sent in written form and will be answered within two weeks.

What additional question needs to be answered in order to collect needed information for the WLAN design?

- A. What type of fiber connection is used between the core and access layer switches?
- B. Who is the campus switch vendor?
- C. Is there enough cooling in the MOF?
- **D. Does the existing wired network support enough drops for an upgraded Wi-Fi Network?**

Answer: D

Explanation:

When upgrading a WLAN infrastructure, it's important to ensure that the existing wired network can support the new wireless

access points (APs) in terms of connectivity and power (if using Power over Ethernet, PoE).

For 'No-Stair Inc.', which is planning a WLAN refresh without specific changes to the Wi-Fi or security requirements but potentially with new AP models and configurations, verifying the capacity of the wired network is crucial. The question about whether the existing wired network has enough drops (ethernet connections) for the upgraded Wi-Fi network addresses this concern. It's essential to ensure that there are sufficient ethernet ports available in the right locations to connect the new APs, and that these ports can provide the necessary power and data rates required by modern APs. This information will help in planning the deployment of the new APs, avoiding potential bottlenecks and ensuring that the upgraded WLAN can deliver the desired performance and coverage

NEW QUESTION # 57

.....

The desktop practice test design is best for self-appraisal and decreases the possibilities of disappointment in the Aruba Certified Campus Access Architect Exam (HPE7-A03) Exam. It is upheld by each window PC which assists clients with clearing the HP HPE7-A03 certification exam with passing marks. The web-based format can be gotten online without introducing the product for the HP HPE7-A03 Exam. The web-based practice test is upheld by every one of the working frameworks and programs which will be useful for Aruba Certified Campus Access Architect Exam (HPE7-A03) exam preparation.

HPE7-A03 Valid Exam Experience: https://www.braindumpstudy.com/HPE7-A03_braindumps.html

Also you can print out many copies of HPE7-A03 study guide and share with others, High as 98 to 100 percent of exam candidates pass the exam after refer to the help of our HPE7-A03 practice braindumps, If you want to pass your IT certification test successfully, it is necessary for you to use BraindumpStudy HPE7-A03 Valid Exam Experience exam dumps, Our HPE7-A03 Valid Exam Experience - Aruba Certified Campus Access Architect Exam study materials can turn you into a prodigy whom many people dream to be.

To expand a selected Live Paint group, either click the Expand button in the Control panel or choose Object > Live Paint > Expand, Creating Pivot Tables, Also you can print out many copies of HPE7-A03 Study Guide and share with others.

HPE7-A03 Practice Materials & HPE7-A03 Test Torrent & HPE7-A03 Pass King

High as 98 to 100 percent of exam candidates pass the exam after refer to the help of our HPE7-A03 practice braindumps, If you want to pass your IT certification test successfully, it is necessary for you to use BraindumpStudy exam dumps.

Our Aruba Certified Campus Access Architect Exam study materials can turn you into a prodigy whom many people dream to be, And soon you can get HP certification HPE7-A03 exam certificate.
