New GH-100 Exam Test, GH-100 Valid Mock Exam

DOWNLOAD the newest DumpsTorrent GH-100 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1dYLvG6miSK1vQp8qu2RxBsLpvJwP6cwT

The study material provided to the customers is available in three different formats. The first one is PDF (Portable Document Format). It is commonly used for quick preparation. Customers can access the Microsoft GH-100 Pdf Dumps anywhere anytime on their smartphones, tablets, and laptops to prepare for Microsoft GH-100 certification exam in a short time.

Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	• Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.
Topic 2	• Enable secure software development and ensure compliance: This section of the exam measures skills of GitHub Enterprise Administrators and deals with applying GitHub's security and compliance capabilities. It covers policies, auditing, scrubbing sensitive data, secret scanning, code scanning with CodeQL, dependency management with Dependabot, and implementing security response plans. It also explores authentication tokens, app security policies, and enterprise managed users.
Topic 3	• Manage access and permissions based on membership: This section of the exam measures skills of DevOps Engineers and reviews how to manage organizations, teams, and repository permissions. It includes default permission settings, team synchronization through AD, scripting across multiple organizations, and aligning enterprise policies with trust requirements. It also contrasts roles such as organization members, owners, collaborators, and billing managers.
Topic 4	• Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.

GH-100 Pass4sure Vce - GH-100 Latest Torrent & GH-100 Study Guide

Over the past few years, we have gathered hundreds of industry experts, defeated countless difficulties, and finally formed a complete learning product - GH-100 test answers, which are tailor-made for students who want to obtain Microsoft certificates. According to statistics, by far, our GH-100 Guide Torrent hasachieved a high pass rate of 98% to 99%, which exceeds all others to a considerable extent. At the same time, there are specialized staffs to check whether the GitHub Administration test torrent is updated every day.

Microsoft GitHub Administration Sample Questions (Q53-Q58):

NEW QUESTION # 53
You need GitHub to automatically notify a third-party service any time a new repository is created. You want to avoid writing custom code. The vendor has told you that they have a tool in the GitHub Marketplace. Which type of tool do you need?

- A. GitHub Action
- B. GitHub Copilot Extension
- C. GitHub App
- D. GitHub Models

Answer: C

Explanation:
You need a GitHub App. Marketplace integrations that listen for events like repository.created and send notifications are delivered as GitHub Apps, since they can subscribe to organization-level webhooks without you writing custom code.

NEW QUESTION # 54
Which of the following is true about outside collaborators in a GitHub organization?

- A. They inherit organization-wide policies, such as SSO requirements.
- B. They have access to all private repositories by default.
- C. They appear in the organization's internal member list.
- D. They are granted explicit access to specific repositories.

Answer: D

Explanation:
Outside collaborators aren't organization members; instead, they're granted explicit access - at read, write, or admin level - to only the repositories you choose.

NEW QUESTION # 55
Which of the following is a key benefit of setting default read permissions across organizations?

- A. Improves collaboration by allowing users to modify content directly.
- B. Increases efficiency in content creation and updates.
- C. Enhances security by minimizing unintended modifications.
- D. Suits environments where all users need write access.

Answer: C

Explanation:
Enforcing a default of Read for organization members ensures they can view content without the ability to push changes, reducing the risk of accidental or unauthorized modifications.

NEW QUESTION # 56
Which of the following is a key benefit of using GitHub Marketplace Apps in an enterprise?

- A. All apps come pre-approved by GitHub's internal security team

- B. They often include integrations with external services, reducing the need for custom code
- C. They guarantee no downtime during enterprise GitHub maintenance windows
- D. Apps eliminate the need for GitHub Actions entirely

Answer: B

Explanation:
GitHub Marketplace Apps come with built-in integrations to external services - so you can plug in things like CI servers, code-quality scanners, or deployment tools without writing and maintaining custom connectors.

NEW QUESTION # 57

You discover that a secret (e.g., a token or password) was accidentally committed to a GitHub repository. What is the first step you should take to mitigate the risk?

- A. Revoke and/or rotate the secret to render it unusable, then assess whether history rewriting is necessary.
- B. Contact GitHub Support to remove the secret from all forks and clones of the repository.
- C. Delete the repository and create a new one to ensure the secret is no longer accessible.
- D. Rewrite the repository history using git filter-repo or BFG Repo-Cleaner to remove the secret from all commits.

Answer: A

Explanation:
The immediate priority is to revoke or rotate the exposed credential so it can no longer be used; once it's invalidated, you can safely proceed with history-rewriting or other cleanup steps.

NEW QUESTION # 58
