Valid Fortinet NSE7_CDS_AR-7.6 Mock Test | Reliable NSE7_CDS_AR-7.6 Test Cost

According to different kinds of questionnaires based on study condition among different age groups, our NSE7_CDS_AR-7.6 test prep is totally designed for these study groups to improve their capability and efficiency when preparing for Fortinet NSE 7 - Public Cloud Security 7.6 Architect NSE7_CDS_AR-7.6 Exams, thus inspiring them obtain the targeted Fortinet NSE7_CDS_AR-7.6 certificate successfully.

Fortinet NSE 7 - Public Cloud Security 7.6 Architect Sample Questions (Q72-Q77):

NEW QUESTION # 72

You are tasked with adding public cloud accounts to FortiCNP cloud protection. After adding an Azure account, you notice the status shows as Partially running. What can you conclude from that status?

- A. FortiCNP will take approximately 15 minutes to change the status to Running.
- B. FortiCNP detected that you are using a free Azure account.
- C. FortiCNP is verifying if there are enough license seats to add the account.
- D. FortiCNP may still be able to monitor the cloud account.

Answer: D

NEW QUESTION # 73

An administrator is looking for a solution that can provide insight into users and data stored in major SaaS applications in the multicloud environment.
Which product should the administrator deploy to have secure access to SaaS applications?

- A. FortiSandbox
- B. FortiCASB
- C. FortiSIEM
- D. FortiWeb

Answer: B

Explanation:
FortiCASB (Cloud Access Security Broker) provides visibility and control over users, data, and security policies in major SaaS applications across multicloud environments, ensuring secure access and compliance.

NEW QUESTION # 74

An administrator is trying to implement FortiCNP with Microsoft Azure Security integration.
However, FortiCNP is not able to extract any cloud integration data from Azure; therefore, real- time cloud security monitoring is not possible.
What is causing this issue?

- A. The administrator enabled the wrong Defender plan for servers.
- B. The organization is using a free Azure AD license.
- C. The FortiCNP account in Azure has the Storage Blob Data Reader role.
- D. The Azure account doesn't have the Global Administrator role.

Answer: C

Explanation:
For FortiCNP integration with Azure Security, the Azure account must have sufficient permissions to extract security and resource data. If the account only has the Storage Blob Data Reader role, it can read storage blobs but cannot access the required security or resource information, which prevents FortiCNP from performing real-time monitoring.

NEW QUESTION # 75

An administrator is trying to implement FortiCNP with Microsoft Azure Security integration. However, FortiCNP is not able to extract any cloud integration data from Azure; therefore, real-time cloud security monitoring is not possible.
What is causing this issue?

- A. The organization is using a free Azure AD license.
- B. The administrator enabled the wrong defender plan for servers.
- C. The Azure account doesn't have the global administrator role.
- D. The FortiCNP account in Azure has the Storage Blob Data Reader role.

Answer: C

NEW QUESTION # 76

Refer to the exhibit. An administrator installed a FortiWeb ingress controller to protect a containerized web application.
What is the reason for the status shown in FortiView?

- A. The SDN connector is not authenticated correctly.
- B. The manifest file deployed is configured with the wrong node IP addresses.
- C. The load balancing type is not set to round-robin.
- D. The FortiWeb VM is missing a route to the node subnet.

Answer: D

Explanation:

The FortiView dashboard shows the backend pods (192.168.0.x:80) as unreachable (orange indicators). This happens when the FortiWeb VM does not have a proper route to the node subnet, preventing it from forwarding traffic to the containerized application endpoints.

NEW QUESTION # 77
