

# Free NCP-EUC Pdf Guide | NCP-EUC Reliable Exam Braindumps

DOWNLOAD the newest Pass4suresVCE NCP-EUC PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=18qDMsNRJKcFWPmLOzkzeZ3faa0zDvS8v>

Our company offers valid Nutanix NCP-EUC Exam Cram materials; you can purchase our products any time as we are 7\*24 on duty throughout the whole year. We can guarantee you that if you purchase our NCP-EUC exam cram materials you can pass test at first attempt without large time and energy. If the test questions change, candidates share one year updates materials and service warranty, or if you fail exam we will full refund directly.

Nutanix NCP-EUC certification exam is an essential certification for IT professionals who manage and deploy virtual desktop infrastructure solutions. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification validates the skills and knowledge required to design, deploy, and manage Nutanix VDI solutions, ensuring organizations can provide efficient and cost-effective end-user computing environments. Passing the NCP-EUC Certification Exam demonstrates a high level of proficiency in virtual desktop infrastructure management, making it a valuable asset to any IT professional's career.

## NCP-EUC Reliable Exam Braindumps - NCP-EUC Test Labs

Most of the NCP-EUC exam dumps on the platform are out of reach for most users due to their high price. Visit the Nutanix NCP-EUC exam dumps if you want to buy real Nutanix NCP-EUC Exam Questions at a good price. Start your Nutanix NCP-EUC exam preparation with our exam practice questions.

Achieving the NCP-EUC certification demonstrates a level of expertise in end-user computing that is recognized by the industry. Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam certification can help IT professionals advance their careers and open up new opportunities for them in the field of end-user computing. The NCP-EUC Certification is a valuable asset for IT professionals who work with Nutanix end-user computing solutions and for organizations that use these solutions to support their business operations.

## Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q162-Q167):

### NEW QUESTION # 162

The operations team have been tasked with increasing overall datacenter efficiency with a target minimum of 80% CPU, memory, and storage capacity utilization. They are requesting usage data from all application owners be sent on a monthly basis to be ingested into their capacity management software.

An administrator has an implementation of four Nutanix clusters under the management of a single Prism Central Instance.

How should the administrator best provide the data needed to the operations team to ensure adherence to the datacenter utilization directive?

- A. Create a Metric Chart in Prism Central with CPU, Memory, and Storage usage across all clusters and export the data to

- be sent to the operations team,
- B. Export the CPU Memory and Storage Usage metrics under Virtual Infrastructure/VMs in Prism Central and FTP the file to the operations team's FTP server.
- C. Review the VM Efficiencies widget in Prism Central and export the data to a comma delimited file to be sent to the operations team.
- D. Schedule a monthly email report with CPU, Memory, and Storage Usage data across all clusters under the Reporting facility in Prism Central.

**Answer: D**

Explanation:

This option allows you to create a custom report with the required metrics for all VMs across all clusters and send it automatically to the operations team via email. This way, you don't have to manually export or FTP the data every month.

### NEW QUESTION # 163

Which scenario represents the best case for how an organization would deploy non-persistent desktops to their employee and customer base?

- A. Application Quality Assurance Testing
- B. Registration kiosks at a conference
- C. High end developers
- D. Private equity traders

**Answer: B**

Explanation:

This is because registration kiosks are used by multiple customers who do not need to personalize their desktops or applications, and who only need to perform a specific task such as registering or checking in. Non-persistent desktops can provide a secure and consistent user experience for these customers, and also reduce management overhead for the organization.

### NEW QUESTION # 164

An administrator has added a tagged VLAN to virtual switch vs1 to support virtual machine traffic. While troubleshooting network utilization, it is observed that only one of the physical NICs in the bond is carrying VM traffic. What can be done to better balance VM traffic?

- A. Increase the MTU to allow jumbo frames.
- B. Add a second vNIC to the virtual machine.
- C. Update the virtual switch to Active-Active.
- D. Move VM traffic to the default virtual switch.

**Answer: C**

Explanation:

In Nutanix AHV networking, the default bond mode for a virtual switch is Active-Backup. In this mode, all traffic flows through a single active physical uplink, while other uplinks remain in standby mode to be used only in the event of a failure. This explains the observation that "only one of the physical NICs... is carrying VM traffic." To utilize multiple physical uplinks simultaneously and balance the traffic, the administrator must change the bond mode to an Active-Active configuration. In AHV, this is achieved by configuring the bond mode to Balance-SLB (Source Load Balancing) or Balance-TCP (LACP). These modes distribute VM traffic across all available physical interfaces in the bond, thereby balancing the load.

### NEW QUESTION # 165

In Frame, what occurs when the minimum value in the capacity settings is set to less than the Quick Publish value specified?

- A. A user will not be able to launch their Frame Desktop or Application
- B. The administrator will receive an error notification.
- C. Regular publish value settings are ignored and Quick Publish values are performed.
- D. Quick Publish value settings are ignored, and regular publishing is performed.

**Answer: D**

Explanation:

Nutanix Frame allows administrators to configure capacity settings for their virtual machines (VMs) that run virtual apps and desktops.

Capacity settings include:

Default capacity, which defines how many VMs are turned on when there is no user activity on the account. This setting helps reduce costs by turning off unused VMs.

Active capacity, which defines how many VMs are turned on when there is user activity on the account.

This setting helps improve performance by ensuring enough VMs are available for user sessions.

Quick Publish, which defines how many VMs are updated with the latest changes when publishing a new version of an app or desktop. This setting helps speed up the publishing process by updating only a subset of VMs instead of all of them.

According to Nutanix Frame documentation<sup>1</sup>, Quick Publish value should be equal to or less than the active capacity value for each instance type.

If Quick Publish value is set higher than active capacity value, then Frame will ignore Quick Publish value and perform regular publishing instead.

### NEW QUESTION # 166

Which display protocol developed by Omnisys Horizon supports both TCP and UDP to be adaptive to network conditions?

- A. PCoIP
- B. Citrix HDX
- C. Microsoft RDP
- **D. Blast Extreme**

**Answer: D**

Explanation:

Blast Extreme is the proprietary display protocol developed by Omnisys (formerly VMware) for Horizon.

A key feature of Blast Extreme is its use of Adaptive Transport. This technology allows the protocol to dynamically switch between UDP (for high performance and lossy networks) and TCP (as a fallback for reliability) based on real-time network conditions. This adaptability ensures the best possible user experience regardless of bandwidth or latency constraints. (PCoIP primarily relies on UDP, and RDP is traditionally TCP-heavy, while HDX is a Citrix protocol).
