Latest JS-Dev-101 Exam Format | JS-Dev-101 Latest Test Discount

It is universally accepted that in this competitive society in order to get a good job we have no choice but to improve our own capacity and explore our potential constantly, and try our best to get the related JS-Dev-101 certification is the best way to show our professional ability, however, the JS-Dev-101 Exam is hard nut to crack and but our JS-Dev-101 preparation questions related to the exam for it seems impossible for us to systematize all of the key points needed for the exam by ourselves. With our JS-Dev-101 exam questions, you will pass the exam with ease.

Salesforce Certified JavaScript Developer - Multiple Choice Sample Questions (Q139-Q144):

NEW QUESTION # 139

Given the code:

```
01 function GameConsole(name) {
02   this.name = name;
03 }
04
05 GameConsole.prototype.load = function(gamename) {
06   console.log(`${this.name} is loading a game: ${gamename}....`);
07 }
08
09 function Console16bit(name) {
10   GameConsole.call(this, name);
11 }
12
13 Console16bit.prototype = Object.create(GameConsole.prototype);
14
15 // insert code here
16 console.log(`${this.name} is loading a cartridge game: ${gamename}....`);
17 }
18
19 const console16bit = new Console16bit('SNEGeneziz');
20 console16bit.load('Super Monic 3x Force');
```

What should a developer insert at line 15?

- A. `Console16bit.prototype.load(gamename) {`
- **B. `Console16bit.prototype.load = function(gamename) {`**
- C. `Console16bit.prototype.load(gamename) = function() {`
- D. `Console16bit = Object.create(GameConsole.prototype).load = function(gamename) {`

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract JavaScript Knowledge A subclass created by:

```
Console16bit.prototype = Object.create(GameConsole.prototype);
```

inherits all prototype methods from GameConsole, including load.

To override the inherited method, the correct syntax is to assign a new function to the method name on the prototype:

```
Console16bit.prototype.load = function(gamename) {
  console.log(`${this.name} is loading a cartridge game: ${gamename}....`);
};
```

Why the other options are wrong:

A assigns something to the constructor function itself, not to the prototype method. Invalid.

B attempts to call a function in the left-hand side of an assignment; invalid syntax.

C also uses invalid syntax-prototype methods cannot be defined this way.

D is the correct definition of a prototype method override.

JavaScript Knowledge Reference (text-only)

Methods are overridden by assigning functions to `Subclass.prototype.methodName`.

`Object.create()` establishes prototype inheritance.

Constructor functions require prototype method attachment using assignment syntax.

NEW QUESTION # 140

A developer receives a comment from the Tech Lead that the code given below has error:

```
const monthName = 'July';
const year = 2019;
if(year === 2019) {
```

```
monthName ='June';
}
```

Which line edit should be made to make this code run?

- A. 02 const year = 2020;
- **B. 01 let monthName ='July';**
- C. 02 let year =2019;
- D. 03 if(year == 2019) {

Answer: B

NEW QUESTION # 141

Given the code below:

```
const copy = JSON.stringify([ newString(' false '), new Boolean( false ), undefined ]);
```

 What is the value of copy?

- A. -- [false, {}]--
- B. -- [\"false\", false, undefined]--
- **C. -- [\"false\", false, null]--**
- D. -- [\"false\", {}]--

Answer: C

NEW QUESTION # 142

A developer creates a new web server that uses Node.js. It imports a server library that uses events and callbacks for handling server functionality. The server library is imported with require and is made available to the code by a variable named server. The developer wants to log any issues that the server has while booting up.

Which code logs an error at boot time with an event?

- A. `server.error((error) => { console.log('ERROR', error); });`
- B. `try { server.start(); } catch(error) { console.log('ERROR', error); }`
- **C. `server.on('error', (error) => { console.log('ERROR', error); });`**
- D. `server.catch((error) => { console.log('ERROR', error); });`

Answer: C

Explanation:

Event-driven Node-style APIs expose events via `.on(eventName, handler)`.

To listen for error events:

```
server.on('error', (error) => {
  console.log('ERROR', error);
});
```

A and B assume methods `.error` or `.catch` that don't exist on typical event emitters.

C only catches synchronous errors from `server.start()`, not async event-based errors.

NEW QUESTION # 143

A developer tries to retrieve all cookies, then sets a certain key value pair in the cookie. These statements are used:

```
01 document.cookie;
02 document.cookie={key:'John Smith';
```

What is the behavior?

- A. Cookies are not read because line 01 should be document, cookies, but the key value is set and all cookies are wiped.
- **B. A Cookies are read and the key value is set, the remaining cookies are unaffected.**
- C. Cookies are read, but the key value is not set because the value is not URL encoded.
- D. Cookies are read and the key value is set, and all cookies are wiped.

Answer: B

NEW QUESTION # 144

.....

Maybe you often come up with great new ideas from daydream, but you can not do anything. Do you have some trouble passing Salesforce JS-Dev-101 Exam? Turn on your computer, click Exam-Killer. Then, you will find the dumps torrent you need. After you purchase our products, we provide free updates for a year. 100% guarantee to get the certification.
