Data Concerns

You are concerned with the quality and completeness of the sales data. You plan to verify the sales data for negative sales amounts.

Reporting Requirements

Litware identifies the following technical requirements:

- Executives require a visual that shows sales by region.
- Regional managers require a visual to analyze weekly sales and returns.
- Sales managers must be able to see the sales data of their respective region only.
- The sales managers require a visual to analyze sales performance versus sales targets.
- The sale department requires reports that contain the number of sales transactions.
- Users must be able to see the month in reports as shown in the following example: Feb 2020.
- The customer service department requires a visual that can be filtered by both sales month and ship month independently.
- The maximum allowed latency to include transactions in reports is five minutes.

You merge data from Sales.Region, Region_Manager, Sales_Manager, and Manager into a single table named Region.

What should you do next to meet the reporting requirements of the executives?

- A. Create a DAX calculated column that retrieves the region manager from the Weekly.Returns table based on the sales.regionjd column.
- B. In the Region table, create a hierarchy that has the manager name, and then the sales manager name.
- C. Apply row-level security (RLS) to the Region table based on the sales manager username.

- D. Configure a bi-directional relationship between Region and Sales.Region.

**Answer: B**

Explanation:
Executives require a visual that shows returns by region manager and the sales managers that report to them.
