Scrum SAFe Product Owner/Product Manager POPM (6.0) Sample Questions (Q52-Q57):

NEW QUESTION # 52

What is one strategy for managing complex critical path challenges?

- A. Allocate work between teams based on forecasted capacity
- B. Distribute work to other teams
- C. Adjust work between teams or split Features and Stories
- D. Sequence work to eliminate same Iteration dependencies

Answer: C

NEW QUESTION # 53

What increases the effectiveness of System Demos?

- A. Spend a lot of time preparing for the demo
- B. Consider how and what to demo during Iteration Planning
- C. Limit team attendance to minimize disruptions to the team
- D. Focus on team-level Metrics

Answer: B

Explanation:

Explanation

Considering how and what to demo during Iteration Planning increases the effectiveness of System Demos, which are events that provide an integrated view of new features delivered by the Agile Release Train (ART) in each Iteration¹². By thinking ahead of how and what to demo, the teams can:

*Align on the product vision and roadmap and ensure that the work items are aligned with the customer value and the PI objectives¹².

*Define clear and testable acceptance criteria for each work item and plan how to verify them in the demo¹².

*Identify and resolve any dependencies, risks, or impediments that may affect the demo¹².

*Prepare the demo environment and the necessary tools and data to support the demo¹².

*Practice the demo and rehearse the script and the roles of the presenters¹².

Some additional information that might be helpful for you are:

*The other options (A, B, and C) are not actions that increase the effectiveness of System Demos, but rather actions that may reduce it.

*Spending a lot of time preparing for the demo may not be effective, as it may take away time and focus from the actual development and testing of the work items. Instead, the teams should aim for continuous integration and built-in quality practices that enable them to demo the work items as soon as they are done¹².

*Limiting team attendance to minimize disruptions to the team may not be effective, as it may reduce the feedback and collaboration opportunities that the demo provides. Instead, the teams should invite and engage all the relevant stakeholders, such as Business Owners, executive sponsors, other Agile Teams, development management, and customers, to the demo¹².

*Focusing on team-level metrics may not be effective, as it may not reflect the true value and progress of the integrated work across

the ART. Instead, the teams should focus on system-level metrics, such as PI objectives, solution quality, and customer satisfaction, to evaluate the outcome and impact of the demo¹².

NEW QUESTION # 54

Why is the problem-solving workshop more effective than traditional lessons learned documents?

- A. Workshops are more engaging than document writing
- B. Collaboration over documentation is a key recommendation of the Agile Manifesto
- C. It involves a small group of leaders
- **D. It makes improvements actionable through backlog items for the next PI**

Answer: D

Explanation:

Explanation

The problem-solving workshop is more effective than traditional lessons learned documents because it makes improvements actionable through backlog items for the next Program Increment (PI). A problem-solving workshop is a structured approach to identify and solve problems that affect the performance and quality of the Agile Release Train (ART) or Solution Train¹. Unlike traditional lessons learned documents, which are often passive and rarely implemented, a problem-solving workshop results in a set of improvement backlog items that are prioritized and planned for the next PI². This way, the teams can implement the improvements and measure their impact on the value delivery³.

NEW QUESTION # 55

What is one benefit of capacity allocation?

- A. It allocates developers and testers to an initiative
- **B. It prevents different types of backlog items from being compared against each other**
- C. It ensures all Value Streams in the Portfolio are appropriately funded
- D. It enables effective time-tracking

Answer: B

Explanation:

Explanation

Capacity allocation is an allocation of work by work item type for an upcoming planning period¹. It helps the Agile Teams to balance their investments across different types of backlog items, such as new features, enablers, defects, and technical debt². One benefit of capacity allocation is that it prevents different types of backlog items from being compared against each other based on their relative value or priority, which can be misleading or subjective³. Instead, capacity allocation allows the teams to focus on delivering value and quality in each work item type, without compromising the other².

NEW QUESTION # 56

What is one influence on Solution and PI Roadmaps?

- A. Value Streams
- **B. Market dynamics**
- C. ART capacity
- D. Customer-centric Features

Answer: B

Explanation:

Explanation

Market dynamics are one of the influences on Solution and PI Roadmaps, which are visual tools that forecast and communicate the planned deliverables, milestones, and investments over a time horizon¹². Market dynamics are the external factors that affect the demand and supply of a product or service in the market, such as customer needs, competitor actions, regulatory changes, technological trends, and economic conditions³.

Market dynamics influence Solution and PI Roadmaps in the following ways:

*They help identify the market problems or opportunities that the solution aims to address or capture¹².

*They help prioritize the features and capabilities that deliver the most value to the customers and stakeholders¹².

*They help align the solution delivery with the market rhythms and events, which are the periodic or one-time occurrences that have a significant impact on the solution adoption or performance¹².

*They help validate the assumptions and hypotheses about the customer and the solution through feedback and learning¹².

Some additional information that might be helpful for you are:

*The other options (A, B, and D) are not influences on Solution and PI Roadmaps, but rather elements or outcomes of the roadmaps.

*Value Streams are the primary constructs for understanding, organizing, and delivering value to the customer.

Value Streams are the basis for defining the solution vision, strategy, and roadmap⁴.

*Customer-centric Features are the work items that represent the benefits or outcomes that the solution provides to the customer or user. Customer-centric Features are the main content of the Solution and PI Roadmaps⁵.

*ART capacity is the amount of work that an Agile Release Train (ART) can handle in a Program Increment (PI). ART capacity is a factor that determines the feasibility and scope of the Solution and PI Roadmaps.

NEW QUESTION # 57

.....

Allowing for your problems about passing the exam, our experts made all necessary points into our SAFe-POPM training materials, making it the most efficient way to achieve success. They can alleviate your pressure, relieve you of tremendous knowledge and master the key points with the least time. As customer-oriented company, we believe in satisfying the customers at any costs. Instead of focusing on profits, we determined to help every customer harvest desirable outcomes by our SAFe-POPM Training Materials. So our staff and after-sales sections are regularly interacting with customers for their further requirements and to know satisfaction levels of them.
