Solutions HQT-4160 exam dumps after paying an affordable Hitachi Vantara Qualified Professional - VSP 5000 Series Installation (HQT-4160) exam questions charge and start this journey without wasting further time.

Hitachi Vantara Qualified Professional - VSP 5000 Series Installation Sample Questions (Q13-Q18):

NEW QUESTION # 13

You need to install an iSCSI channel board feature on a VSP 5500 system. Which two steps are required? (Choose two.)

- A. Use the Maintenance Utility (Sub Panel) of the VSP GUI to assign ports to the added boards.
- **B. Use the Maintenance Utility to add the boards to the system configuration.**
- C. Physically install the pair of channel boards in any available slot.
- **D. Physically install the pair of channel boards in the appropriate slots.**

Answer: B,D

Explanation:

Physically install the pair of channel boards in the appropriate slots.

Channel boards must be installed in specific, designated slots to ensure proper system recognition and redundancy.

Use the Maintenance Utility to add the boards to the system configuration.

After installation, the Maintenance Utility is used to logically add and configure the new channel boards within the system.

NEW QUESTION # 14

During the parts-replacement process on a VSP 5000 storage system, what is the recommended action before removing any component?

- A. Isolating the power supply to the specific component
- B. Notifying all connected users about the impending downtime
- C. Documenting the serial number of the component
- **D. Ensuring the system is in maintenance mode**

Answer: D

Explanation:

Before replacing any component in a Hitachi VSP 5000 storage system, it is critical to put the system or the affected controller/module into maintenance mode.

This ensures:

No active I/O is directed to the component being replaced.

Data integrity is preserved during the removal and replacement process.

The system prevents accidental disruptions to other parts of the storage array.

Automatic failover or rebuild processes do not interfere with the replacement.

NEW QUESTION # 15

You are installing a VSP 5000 system, it is connected to the power distribution and you now want to power it up. Which three steps should you perform as part of the Power On sequence?

(Choose three.)

- **A. Turn on the PS ON/PS OFF switch on the HSNPANEL0.**
- **B. Press the Power Button on each CBX.**
- C. Press the LAN Reset Button on CBX 0.
- D. Check that the Power LED on all the CBXs are on.
- **E. Turn on the main breakers at the PDUs.**

Answer: A,B,E

Explanation:

Turn on the main breakers at the PDUs.

Power distribution must be enabled first by switching on the main breakers to supply electricity to the entire system.

Turn on the PS ON/PS OFF switch on the HSNPANEL0.

Activating the PS ON/PS OFF switch on the HSN panel supplies power to system components.

Press the Power Button on each CBX.

Each Controller Box (CBX) must be powered on individually by pressing its power button to start the system boot process.

NEW QUESTION # 16

Which statement is correct regarding the Interconnect Switches (ISWs) on VSP 5000 systems?

- A. ISWs are switches that route data between nodes and they are located on each controller of the node.
- B. ISWs are switches that provide redundancy for data path and they are only used when the number of CBX pairs is higher than two.
- C. ISWs are switches that route data between nodes using Hitachi Interconnect Edge and X-Path cables, and they are located on the Hitachi Service and Network Boxes (HSNBXs).
- **D. ISWs are standalone, optional switches that can be used for both network and data path.**

Answer: D

Explanation:

The Interconnect Switches on a VSP 5000 are delivered as standalone 1 U switch chassis that house both the PCIe "interconnect" modules (for routing data between controller nodes) and an Ethernet switch (for management/network traffic), so they serve both network and data-path roles.

NEW QUESTION # 17

Which tool do you use to configure SNMP on a VSP 5000 storage system?

- A. Maintenance Utility
- B. Webconsole
- C. Maintenance Utility Sub Panel
- **D. SVP application**

Answer: D

Explanation:

The SVP (Service Processor) application is used to configure SNMP settings on a VSP 5000 storage system. This tool provides access to system management features, including SNMP configuration.

NEW QUESTION # 18

.....

Through years of efforts and constant improvement, our HQT-4160 study materials stand out from numerous study materials and become the top brand in the domestic and international market. Our company controls all the links of HQT-4160 study materials which include the research, innovation, survey, production, sales and after-sale service strictly and strives to make every link reach the acme of perfection. Our company pays close attentions to the latest tendency among the industry and the clients' feedback about our HQT-4160 Study Materials.
