問題 #25

An administrator wants to view the information for all the roles and the number of users assigned to each of them What role must a user belong to in order to view this information?

- A. Database administrator
- B. Database infrastructure administrator
- C. Infrastructure administrator
- **D. Super Administrator**

答案: D

解題說明:

To view information about all roles and the number of users assigned to each in NDB, the user must belong to the Super Administrator role. This role provides full administrative privileges, including access to the "Users and Roles" section of the NDB

GUI, where role assignments and user counts are visible. Lower-tier roles (e.g., Database Infrastructure Administrator, Database Administrator, Infrastructure Administrator) have limited scopes and cannot access this comprehensive role/user overview.

問題 #26

When doing an Era software upgrade for a Multi-Cluster enabled installation, which component is upgraded first?

- A. Era Cluster Agent
- B. Era Data Warehouse
- C. Era Sewer
- D. Database Server Agent

答案： A

解題說明：

According to the Nutanix Database Automation (NCP-DB) learning documents, when doing an Era software upgrade for a Multi-Cluster enabled installation, the Era Cluster Agent is upgraded first. This is the first component in a Nutanix Environment Upgrade cycle. The Era Cluster Agent is crucial for managing and monitoring the health of the Nutanix clusters. Please refer to the official Nutanix documentation and training materials for more detailed information.

問題 #27

How long is the default continuous recovery for the Gold SLA in Era Time Machine?

- A. 60 days
- B. 30 days
- C. 90 days
- D. 15 days

答案： B

解題說明：

The default continuous recovery for the Gold SLA in Era Time Machine is 30 days. This means that the system keeps a continuous recovery point for the last 30 days, allowing you to restore your database to any point within this period.

問題 #28

What is the minimum frequency in minutes configurable for NDB Log Catch-up operation?

- A. 0
- B. 1
- C. 2
- D. 3

答案： C

解題說明：

The minimum frequency configurable for the NDB Log Catch-up operation is 15 minutes. This setting determines how frequently the log catch-up process runs, which is crucial for maintaining data integrity and ensuring up-to-date database states.

問題 #29

How can HA drivers for a Database VM be upgraded?

- A. LCM driver upgrade
- B. Database software patching
- C. One-click software upgrade
- D. Database VM OS patching

答案： A

解題說明：

HA drivers are software components that enable high availability features for database VMs, such as failover, fencing, and heartbeat. HA drivers can be upgraded using the Life Cycle Management (LCM) feature of Nutanix Prism. LCM can detect the available updates for HA drivers and apply them to the database VMs in a non-disruptive manner. LCM can also perform health checks and pre-upgrade validations to ensure the successful completion of the upgrade process. One-click software upgrade is a feature of Nutanix Era that allows you to upgrade the Era software itself, not the HA drivers. Database VM OS patching is a feature of Nutanix Era that allows you to patch the operating system of the database VMs, not the HA drivers. Database software patching is a feature of Nutanix Era that allows you to patch the database software of the database VMs, not the HA drivers.
