

Training DSPM-Deploy-and-Administer Solutions, DSPM-Deploy-and-Administer Related Certifications

This practice exam software includes all DSPM-Deploy-and-Administer exam questions that have a high chance of appearing in the Certified Forcepoint DSPM - Professional: Deploy and Administer Exam exam. The DSPM-Deploy-and-Administer practice exam allows you to set the number of questions and time for each attempt and presents you with a self-assessment report showing your performance. You might not be able to get all-in-one practice material for the Certified Forcepoint DSPM - Professional: Deploy and Administer Exam DSPM-Deploy-and-Administer of such excellent quality anywhere else.

For the office worker, they are both busy in the job or their family; for the students, they possibly have to learn or do other things. But if they use our DSPM-Deploy-and-Administer test prep, they won't need so much time to prepare the exam and master exam content in a short time. What they need to do is just to spare 1-2 hours to learn and practice every day and then pass the exam with DSPM-Deploy-and-Administer Test Prep easily. It costs them little time and energy.

DSPM-Deploy-and-Administer - Certified Forcepoint DSPM - Professional: Deploy and Administer Exam Latest Training Solutions

As is known to us, there are best sale and after-sale service of the DSPM-Deploy-and-Administer certification training dumps all over the world in our company. Our company has employed a lot of excellent experts and professors in the field in the past years, in order to design the best and most suitable DSPM-Deploy-and-Administer latest questions for all customers. More importantly, it is evident to all that the DSPM-Deploy-and-Administer Training Materials from our company have a high quality, and we can make sure that the quality of our products will be higher than other study materials in the market. If you want to pass the DSPM-Deploy-and-Administer exam and get the related certification in the shortest time, choosing the DSPM-Deploy-and-Administer training materials from our company will be in the best interests of all people.

Forcepoint Certified Forcepoint DSPM - Professional: Deploy and Administer Exam Sample Questions (Q41-Q46):

NEW QUESTION # 41

What is the primary function of a detector in Forcepoint DSPM?

- A. To create user credential tags during a data scan.
- **B. To create tags based on specific keyword searches during scans.**
- C. To increase storage capacity by flagging files for archiving.
- D. To increase network speed by blocking files tagged with sensitive data.

Answer: B

Explanation:

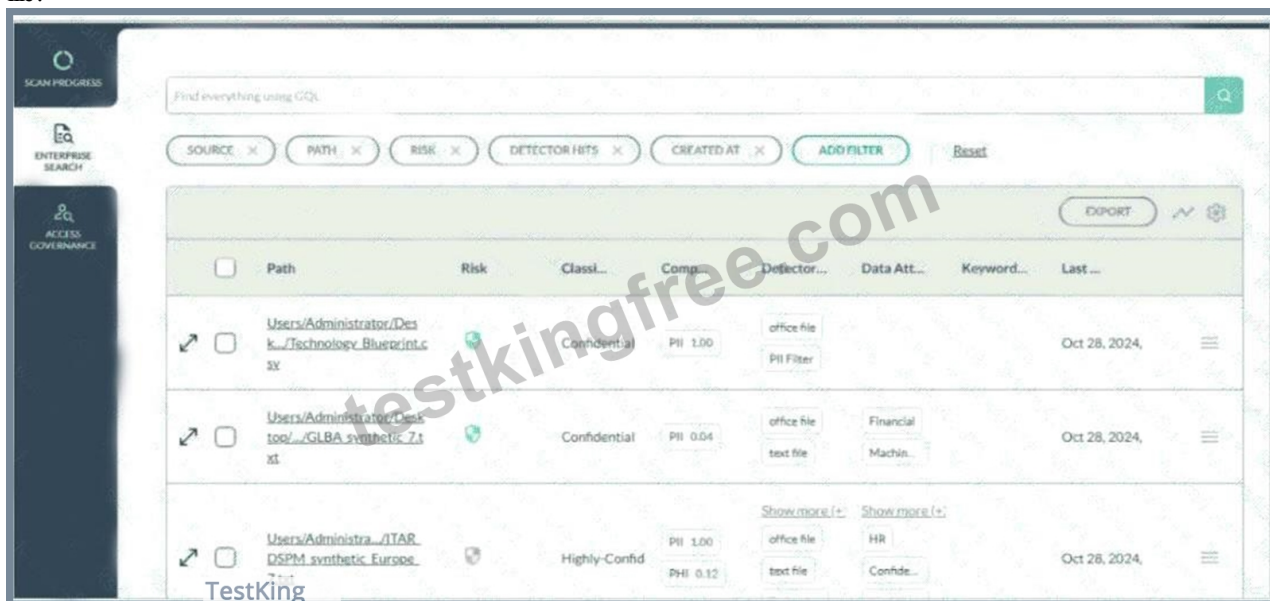

A detector in Forcepoint DSPM is a rule-based classification component used during scanning to identify files whose content or path matches defined detection logic. The correct answer is B because detectors are designed to locate specific patterns, words, or expressions and then contribute to classification/tagging outcomes. Forcepoint describes Detector Groups in AI Mesh as components where "detectors assess both the file path and its contents using rule-based logic, such as regular expressions and keywords," returning a match when the content fits the defined patterns.

This is distinct from AI classifiers, which infer sensitive-data meaning from broader semantic or machine-learning signals. Detectors are the more deterministic mechanism; they look for defined indicators such as a keyword, phrase, regular expression, or path element. Forcepoint release notes also describe detector functionality as allowing content or path search when creating a detector, including an example where adding the word Archive to a detector can tag files located in an Archive folder.

The other options confuse detectors with unrelated platform functions. Detectors do not create credential tags specifically, optimize network throughput, block files for speed, or increase storage capacity. References /topics: Detectors, Pattern Matching, AI Mesh, Classification Tags, Content and Path Search .

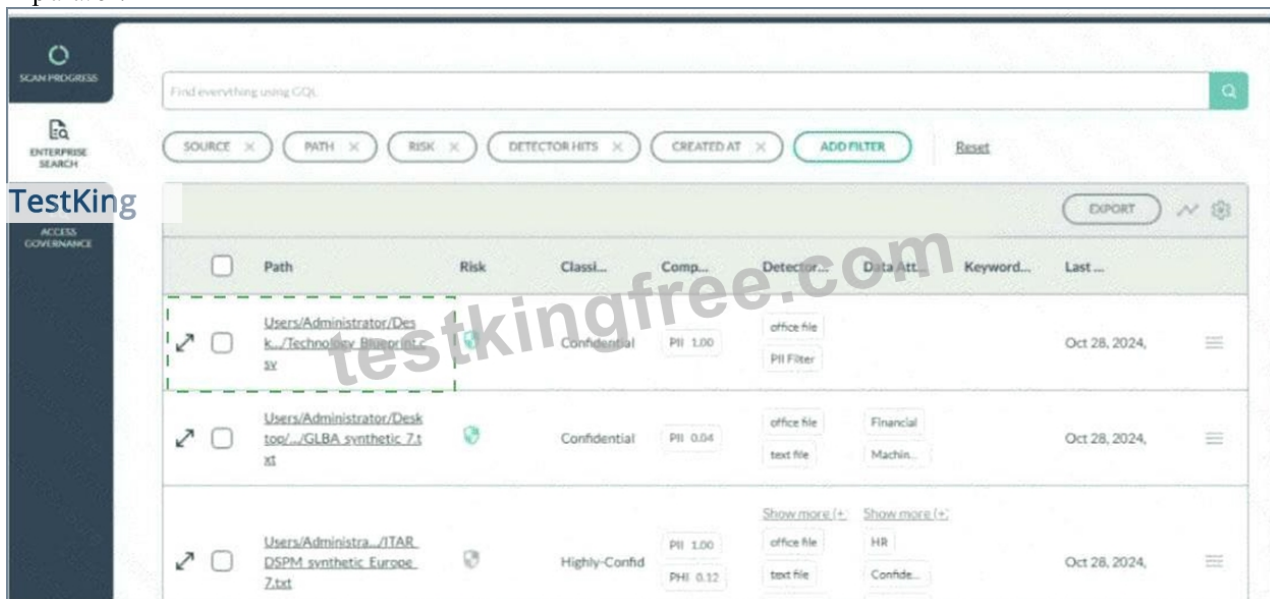

NEW QUESTION # 42

In which area of the Enterprise Search view would you click if you wanted to see the file details of the Technology Blueprint.CSV file?

Answer:

Explanation:

Explanation:

Users/Administrator/Desktop/.../Technology Blueprint.csv

To view the file details for Technology Blueprint.CSV , select the diagonal expand/open-details icon on the far-left side of that file's row in Enterprise Search . This icon appears before the row checkbox and before the file path. It is the row-level control used to open the detailed file view for the selected file.

Forcepoint DSPM's Enterprise Search view presents discovered files in a tabular results format, with each row representing an individual scanned file and columns showing properties such as path, risk, classification, compliance, detector hits, attributes, keywords, and last classification date. Forcepoint documentation describes Enterprise Search as the location where each listed file has associated file details shown in columns and where administrators can refine displayed information through column configuration. The checkbox is used for selecting the row for bulk or action-based operations, and the hamburger menu on the right provides additional row actions such as permissions or other menu-driven options. To inspect the file itself, the correct target is the left-side expand/details icon aligned with the Technology Blueprint.CSV entry. References/topics: Enterprise Search, File Details, Search Results Table, Row-Level Expand Details, File Classification Review .

NEW QUESTION # 43

Anna created a complex GQL query that she plans on using weekly to filter the results and export the data for review. How can she store this query for repeated use?

- A. From Administration, select Bookmarks, enter the GQL filter, then select Save.
- **B. From Enterprise Search, enter the GQL filter, select the star icon to bookmark the filter.**
- C. From Enterprise Search, select Import to upload an Excel file that contains a list of GQL filters.
- D. From Analytics, select Import to upload an Excel file that contains a list of GQL filters.

Answer: B

NEW QUESTION # 44

You can configure your Forcepoint DSPM installation with Active Directory. What third-party product is used to import your AD users?

- A. Kubernetes
- B. User Federation
- C. Rancher
- **D. Keycloak**
- E. Okta

Answer: D

Explanation:

The correct answer is Keycloak . In Forcepoint DSPM standalone deployments, user authentication and user import workflows are handled through the embedded Keycloak administration console. The official Forcepoint DSPM documentation states that "AD Users are added to Forcepoint DSPM through Keycloak" and then describes the workflow for configuring Keycloak's User Federation capability. The process begins by opening the Keycloak admin console, logging in as an administrator, confirming that the gv realm is selected, navigating to User Federation , and adding an LDAP provider for the Active Directory source.

The distractors map to adjacent but incorrect concepts. User Federation is not the third-party product; it is the Keycloak feature used to connect LDAP or Active Directory identity stores. Kubernetes provides container orchestration and is not responsible for directory import. Rancher is used in platform or cluster management contexts, not AD identity synchronization. Okta can function as an identity provider in many enterprise environments, but it is not the specific product identified in the DSPM AD import workflow. References/topics: User Management, Keycloak Administration, gv Realm, Active Directory Integration, LDAP Provider, User Federation .

NEW QUESTION # 45

Which of the following statements is true about Forcepoint DSPM pattern matching?

- A. Data patterns can be exported from one DSPM configuration and imported into another DSPM configuration.
- B. The RegEx can be updated on default data patterns to better suit your needs.
- C. Customized data patterns can be assigned to specific countries.
- **D. The RegEx can be updated on custom data patterns to better suit your needs.**

Answer: D

Explanation:

The correct answer is A . Forcepoint DSPM pattern matching is designed to let administrators define and tune custom detection logic for organisation-specific sensitive data. The documented pattern-matching function identifies particular information in documents by using Regular Expressions , and Forcepoint notes that pattern matching uses Golang RegEx syntax, which is separate from Detector syntax.

When a new pattern is added under Administration > Pattern Matching , the configuration includes Pattern Name , Regular Expression , enablement state, hidden RegEx handling, and tag assignments for Classification , Compliance , and Distribution . Forcepoint states that the Regular Expression is "the sequence to be matched," and that selected tags can override machine-learning model output during endpoint suggestions and file scans. This supports the principle that custom patterns can be adjusted so the RegEx better matches an organisation's data formats, identifiers, project codes, or regulatory artifacts. The other statements do not match the documented pattern workflow. Country assignment is not presented as a core custom-pattern field. Export/import of data patterns is not part of the stated pattern-matching configuration flow. Default or preconfigured patterns are provided as built-in detection content and should not be treated as administrator-editable RegEx templates. References/topics: Pattern Matching, Add New Pattern, RegEx, Classification Tags, Compliance Tags, Distribution Tags .
