

Exam Microsoft GH-200 Score, GH-200 Certificate Exam

What's more, part of that Exam4PDF GH-200 dumps now are free: <https://drive.google.com/open?id=1kBLj7P10hbqsJs1sPPGSDfzIb3Er21i>

GH-200 practice test keeps a record of your attempts so you can evaluate and enhance your progress. Our GitHub Actions (GH-200) practice exams replicate the real GitHub Actions (GH-200) exam environment so you can eliminate your anxiety. You can access the web-based GitHub Actions (GH-200) practice exam through browsers. Moreover, operating systems such as Mac, iOS, Android, Windows, and Linux support the online GH-200 practice exam.

Microsoft GH-200 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Consume Workflows: This domain targets Software Developers and Quality Assurance Engineers and focuses on interpreting workflow runs and their outcomes. It covers identifying triggering events, reading workflow configurations, troubleshooting failures by analyzing logs, enabling debug logging, managing environment variables, caching dependencies, and passing data between jobs. Candidates also manage workflow runs, artifacts, approvals, and status badges, as well as locating workflows within repositories and leveraging organizational templated workflows.
Topic 2	<ul style="list-style-type: none">• Manage GitHub Actions in the Enterprise: This section measures the expertise of Enterprise Administrators and Platform Engineers in distributing and managing GitHub Actions and workflows at the organizational level. It includes reuse and sharing of templates, strategies for managing reusable components via repositories and naming conventions, controlling access to actions, setting organization-wide usage policies, and planning maintenance to ensure efficient enterprise-wide deployment of GitHub Actions.
Topic 3	<ul style="list-style-type: none">• Author and Maintain Actions: This domain evaluates the abilities of Action Developers and Automation Engineers to select and create suitable types of GitHub Actions, such as JavaScript, Docker containers, or run steps. It emphasizes troubleshooting action code, understanding the components and file structures of actions, and using workflow commands within actions to communicate with runners, including exit code management.
Topic 4	<ul style="list-style-type: none">• Author and Maintain Workflows: This section of the exam measures skills of DevOps Engineers and Automation Specialists and covers building and managing workflows triggered by events such as pushes, scheduled times, manual triggers, and webhooks. It includes understanding workflow components like jobs, steps, actions, and runners, syntax correctness, environment variables, secrets management, and dependencies between jobs. Candidates will also demonstrate practical abilities to create workflows for various purposes, including publishing packages, using service containers, routing jobs, and deploying releases to cloud providers.

Pass Guaranteed Quiz GH-200 - Professional Exam GitHub Actions Score

Our GH-200 exam prep can bring you high quality learning platform to pass the variety of exams. GH-200 guide dumps are elaborately composed with major questions and answers. GH-200 test question only needs 20 hours to 30 hours to practice. There is important to get the GH-200 Certification as you can. There is a fabulous product to prompt the efficiency--the GH-200 exam prep, as far as concerned, it can bring you high quality learning platform to pass the variety of exams.

Microsoft GitHub Actions Sample Questions (Q23-Q28):

NEW QUESTION # 23

You installed specific software on a Linux self-hosted runner. You have users with workflows that need to be able to select the runner based on the identified custom software. Which steps should you perform to prepare the runner and your users to run these workflows? (Each correct answer presents part of the solution. Choose two.)

- A. Add the label custom-software to the runner.
- B. Inform users to identify the runner based on the group.
- C. Configure the webhook and network to enable GitHub to trigger workflow.
- D. Inform users to identify the runner with the labels custom-software and linux.
- E. Add the label linux to the runner.
- F. Create the group custom-software-on-linux and move the runner into the group.

Answer: A,D

Explanation:

[F] Add a label for the custom software as required.

Note: Using labels with self-hosted runners

You can use labels to organize your self-hosted runners based on their characteristics.

Creating a custom label

You can create custom labels for runners at the repository and organization levels.

[C, not D] Linux is a default label and does not have to be created to be used.

Reference:

<https://docs.github.com/en/actions/how-tos/manage-runners/self-hosted-runners/apply-labels>

NEW QUESTION # 24

As a developer, one of your workflows will require XCode version 11.2 hosted on macOS Catalina (i.e., v10.15). You've already created and configured a self-hosted runner to conform to those requirements and registered it with your organization. What else should you do to ensure that the workflow accesses the correct runner instance? (Each answer presents a complete solution. Choose three.)

- A. Add your runner to the appropriate runner groups.
- B. Create custom runner labels for macos-10.15 and xcode-11.2.
- C. In the workflow, specify:
runs-on: [\${{groups.macos-10.15}}, \${{groups.xcode-11.2}}].
- D. In the workflow, specify:
runs-on: [self-hosted, macos-10.15, xcode-11.2].
- E. Assign the custom labels to the self-hosted runner.
- F. Create runner groups named macos-10.15 and xcode-11.2.

Answer: B,D,E

Explanation:

[C, F] Using custom labels to route jobs

You can create custom labels and assign them to your self-hosted runners at any time. Custom labels let you send jobs to particular types of self-hosted runners, based on how they're labeled.

[E] Using default labels to route jobs

A self-hosted runner automatically receives certain labels when it is added to GitHub Actions.

These are used to indicate its operating system and hardware platform:

self-hosted: Default label applied to self-hosted runners.

linux, windows, or macOS: Applied depending on operating system.

x64, ARM, or ARM64: Applied depending on hardware architecture.

You can use your workflow's YAML to send jobs to a combination of these labels. In this example, a self-hosted runner that matches all three labels will be eligible to run the job:

runs-on: [self-hosted, linux, ARM64]

self-hosted - Run this job on a self-hosted runner.

linux - Only use a Linux-based runner.

ARM64 - Only use a runner based on ARM64 hardware.

Reference:

<https://docs.github.com/en/actions/how-to/manage-runners/self-hosted-runners/use-in-a-workflow>

NEW QUESTION # 25

As a developer, you are designing a workflow and need to communicate with the runner machine to set environment variables, output values used by other actions, add debug messages to the output logs, and other tasks. Which of the following options should you use?

- A. workflow commands
- B. self-hosted runners
- C. environment variables
- D. enable debug logging

Answer: A

Explanation:

E composite run step

Explanation:

Workflow commands are special commands that allow you to interact with the runner, set environment variables, output values, add debug messages, and perform other tasks within the workflow. These commands are used to modify the environment or influence the behavior of the GitHub Actions runner.

NEW QUESTION # 26

As a DevOps engineer, you are developing a container action. You need to execute a cleanup script after completing the main script execution. Which code block should be used to define the cleanup script?

- A.
- B.
- C.
- D.

Answer: C

Explanation:

The correct syntax for specifying a cleanup script to be run after the main entry point is executed in a Docker-based GitHub Action is to use the post key. This ensures that cleanup.sh runs after the main script (main.sh) has completed.

NEW QUESTION # 27

Which workflow event is used to manually trigger a workflow run?

- A. workflow_run
- B. workflow_dispatch
- C. status
- D. create

Answer: B

Explanation:

Manually running a workflow

When a workflow is configured to run on the workflow_dispatch event, you can run the workflow using the Actions tab on GitHub, GitHub CLI, or the REST API.

Configuring a workflow to run manually

To run a workflow manually, the workflow must be configured to run on the workflow_dispatch event.

To trigger the workflow_dispatch event, your workflow must be in the default branch.
