NEW QUESTION # 42

Which information is used to calculate whether a WAN link has high usage?

- A. total number of devices that are actively passing traffic
- B. **value under Security & SD WAN > SD WAN & Traffic Shaping > Uplink Configuration**
- C. total historical throughput of an uplink
- D. data under Security & SD WAN > Appliance Status > Uplink > Live Data

Answer: B

Explanation:

Explanation

Which information is used to calculate whether a WAN link has high usage not how to view (To accurately identify high utilization, users must set the ISP-provided bandwidth limits under Security and SD-WAN > SD-WAN and Traffic Shaping > Uplink Configuration for each uplink. If the bandwidth usage is higher than 80% of the defined limit, it will mark that uplink as High Usage.)

NEW QUESTION # 43

How does a Meraki device behave if cloud connectivity is temporarily lost?

- A. The offline device reboots every 5 minutes until connection is restored.
- B. **The offline device continues to run with its last known configuration until cloud connectivity is restored.**
- C. The offline device stops passing traffic.
- D. The offline device tries to form a connection with a local backup sever.

Answer: B

Explanation:

Explanation

What happens if a network loses connectivity to the Meraki cloud?

Because of Meraki's out of band architecture, most end users are not affected if Meraki wireless APs, switches, or security appliances cannot communicate with Meraki's cloud services (e.g., because of a temporary WAN failure):

- * Users can access the local network (printers, file shares, etc.)
- * If WAN connectivity is available, users can access the Internet
- * Network policies (firewall rules, QoS, etc.) continue to be enforced
- * Users can authenticate via 802.1X/RADIUS and can roam wirelessly between access points
- * Users can initiate and renew DHCP leases
- * Established VPN tunnels continue to operate
- * Local configuration tools are available (e.g., device IP configuration)

NEW QUESTION # 44

What are two roles of the network and device tags in a Dashboard? (Choose two.)

- A. Device tags can be assigned to MR APs to influence the gateway selection for repeaters in a mesh wireless network.
- B. Network tags can be used to assign networks to separate Auto VPN domains in an Organization with many networks.
- C. Device tags can be used to simplify the assignment of device-level permissions in an Organization with many administrators.
- D. Tags enable administrators to configure a combination of network and device specific tags to create summary reports filtered for specific devices across multiple networks.
- E. Network tags can be used to simplify the assignment of network-level permissions in an Organization with many networks.

Answer: D,E

Explanation:

Explanation

See Permissions by Network Tag section To simplify the assignment of network-level permissions in an organization with many networks, permissions can be granted to users for a given network tag.

[> Configure > Manage Tags](https://documentation.meraki.com/General_Administration/Managing_Dashboard_Access/Managing_Dashboard_The_Organization) page allows Administrators to configure a combination of Network and Device specific tags to create Summary Reports filtered for specific devices across multiple networks.
