

Cybersecurity-Practitioner Valid Guide Files, Cybersecurity-Practitioner Exam Preview

P.S. Free 2026 Palo Alto Networks Cybersecurity-Practitioner dumps are available on Google Drive shared by Lead1Pass: <https://drive.google.com/open?id=10136nzMlxTnPyREqGDHwv6sgT5XztyY8>

The Lead1Pass is one of the leading platforms that have been offering valid, updated, and real Palo Alto Networks Cybersecurity-Practitioner exam dumps for many years. The Palo Alto Networks Cybersecurity Practitioner Cybersecurity-Practitioner practice test questions offered by the Lead1Pass are designed and verified by experienced Palo Alto Networks Cybersecurity-Practitioner Certification Exam trainers. They work together and put all their expertise to ensure the top standard of Palo Alto Networks Cybersecurity Practitioner Cybersecurity-Practitioner valid dumps.

The scoring system of our Cybersecurity-Practitioner exam torrent absolutely has no problem because it is intelligent and powerful. First of all, our researchers have made lots of efforts to develop the scoring system. So the scoring system of the Cybersecurity-Practitioner test answers can stand the test of practicability. Once you have submitted your practice. The scoring system will begin to count your marks of the Cybersecurity-Practitioner Exam guides quickly and correctly. At the same time, there is specific space below every question for you to make notes. So you can quickly record the important points or confusion of the Cybersecurity-Practitioner exam guides.

Cybersecurity-Practitioner Exam Preview - Composite Test Cybersecurity-Practitioner Price

There is an irreplaceable trend that an increasingly amount of clients are picking up Cybersecurity-Practitioner practice materials from tremendous practice materials in the market. There are unconquerable obstacles ahead of us if you get help from our Cybersecurity-Practitioner practice materials. So many exam candidates feel privileged to have our Cybersecurity-Practitioner practice materials. Your aspiring wishes such as promotion chance, or higher salaries or acceptance from classmates or managers and so on. And if you want to get all benefits like that, our Cybersecurity-Practitioner practice materials are your rudimentary steps to begin.

Palo Alto Networks Cybersecurity Practitioner Sample Questions (Q71-Q76):

NEW QUESTION # 71

Which product from Palo Alto Networks extends the Security Operating Platform with the global threat intelligence and attack context needed to accelerate analysis, forensics, and hunting workflows?

- A. WildFire
- B. STIX
- C. Global Protect
- D. AutoFocus

Answer: D

Explanation:

page 173 "AutoFocus makes over a billion samples and sessions, including billions of artifacts, immediately actionable for security analysis and response efforts. AutoFocus extends the product portfolio with the global threat intelligence and attack context needed

to accelerate analysis, forensics, and hunting workflows. Together, the platform and AutoFocus move security teams away from legacy manual approaches that rely on aggregating a growing number of detection-based alerts and post-event mitigation, to preventing sophisticated attacks and enabling proactive hunting activities."

NEW QUESTION # 72

What is a characteristic of the National Institute Standards and Technology (NIST) defined cloud computing model?

- A. requires the use of only one cloud service provider
- B. requires the use of two or more cloud service providers
- C. defines any network service
- **D. enables on-demand network services**

Answer: D

Explanation:

According to the NIST definition, cloud computing is a model for enabling ubiquitous, convenient, on-demand network access to a shared pool of configurable computing resources (e.g., networks, servers, storage, applications, and services) that can be rapidly provisioned and released with minimal management effort or service provider interaction¹. One of the essential characteristics of cloud computing is on-demand self-service, which means that users can request and obtain computing resources as needed, without requiring human intervention from the service provider². On-demand network services are an example of this characteristic, as they allow users to access network resources such as bandwidth, routing, firewall, or load balancing, on demand and in a scalable manner³. NEW QUESTION # 73

Which aspect of a SaaS application requires compliance with local organizational security policies?

- A. Types of physical storage media used
- **B. Acceptable use of the SaaS application**
- C. Vulnerability scanning and management
- D. Data-at-rest encryption standards

Answer: B

Explanation:

SaaS applications are cloud-based software that users can access from anywhere and any device. This poses a challenge for organizations to ensure that their employees are using the SaaS applications in a secure and compliant manner. Therefore, organizations need to establish and enforce acceptable use policies (AUPs) for SaaS applications that define the rules and guidelines for accessing and using the applications, such as who can use them, what data can be stored or shared, and what actions are prohibited¹². AUPs help organizations to protect their data, prevent unauthorized access, and comply with local regulations and standards³. NEW QUESTION # 74

How does Prisma SaaS provide protection for Sanctioned SaaS applications?

- A. Prisma SaaS does not provide protection for Sanctioned SaaS applications because they are secure
- B. Prisma access uses Uniform Resource Locator (URL) Web categorization to provide protection and sharing visibility
- **C. Prisma SaaS connects directly to sanctioned external service providers SaaS application service to provide protection and sharing visibility**
- D. Prisma SaaS connects to an organizations internal print and file sharing services to provide protection and sharing visibility

Answer: C

Explanation:

Prisma SaaS connects directly to the applications themselves, therefore providing continuous silent monitoring of the risks within the

sanctioned SaaS applications, with detailed visibility that is not possible with traditional security solutions.

NEW QUESTION # 75

What is the definition of a zero-day threat?

- A. The amount of time it takes to discover a vulnerability and release a security fix
- **B. The period between the discovery of a vulnerability and development and release of a patch**
- C. The day a software vendor becomes aware of an exploit and prevents any further hacking
- D. A specific day during which zero threats occurred

Answer: B

Explanation:

A zero-day threat is an attack that takes advantage of a security vulnerability that does not have a fix in place. It is referred to as a "zero-day" threat because once the flaw is eventually discovered, the developer or organization has "zero days" to then come up with a solution. A zero-day threat can compromise a system or network by exploiting the unknown vulnerability, and can cause data loss, unauthorized access, or other damages. Zero-day threats are difficult to detect and prevent, and require advanced security solutions and practices to mitigate them. Reference:
