EMC Dell Midrange Storage Solutions Design 2023 Sample Questions (Q63-Q68):

NEW QUESTION # 63

A customer is using Dell Unity XT 880 storage with 120 HDD Drives, with 10% of flash capacity from flash drives in RAID 5. They have eight LUNs provisioned for bandwidth-oriented workload.

The workload is evenly split between two controllers, all available eight FC 32Gb/s ports. The customer is not able to reach more than 10 GB/s of read throughput.

What is the cause of this issue?

- A. HDD drives saturated
- B. Frontend saturated
- C. Read cache saturated
- **D. SAS bus saturated**

Answer: D

NEW QUESTION # 64

What action is performed in the "Create a file import session" during a PowerStore file import?

- **A. Options for import are specified.**
- B. Source import network interface is created.
- C. Destination NAS server resources are created.
- D. Production interfaces are disabled on the source side.

Answer: A

Explanation:

During the "Create a file import session" in a PowerStore file import, options for import are specified. This step involves configuring various settings and parameters for the import session, such as the source and destination details, data migration policies, and any specific options that need to be applied during the import process. This ensures a smooth and controlled data migration.

NEW QUESTION # 65

A customer with a Dell Unity XT 680 asks about enabling the Advanced Deduplication feature.

Which configuration is recommended for enabling the feature?

- **A. On All-Flash pools when CPU utilization is at or less than 50%**
- B. On hybrid pools with free capacity above 20%
- C. On All-Flash pools with free capacity above 20%

- D. On hybrid pools when CPU utilization is at or less than 50%

Answer: A

NEW QUESTION # 66

How many expansion enclosures can be added to a Dell PowerStore 1000T that has 10 SCM drives in the base enclosure?

- A. 0
- B. 1
- **C. 2**
- D. 3

Answer: C

Explanation:

Dell PowerStore 1000T supports the addition of a maximum of one expansion enclosure when it has 10 SCM drives in the base enclosure. An expansion enclosure can be added to the base enclosure and allows the system to support additional drives and increase storage capacity.

NEW QUESTION # 67

A company has a Dell Unity XT 880 at its Boston site providing file storage for a business production application. The company has a second remote site 8 km (5 mi) away in Cambridge. A third site is in New York (342 km (213 mi) from the Boston site). How can the same production data be protected against system outage with a zero RPO and a maximum of 15 minutes RPO data recovery?

- A. Synchronous replicate from Boston to Cambridge Synchronous replicate from Boston to New York
- B. Asynchronous replicate from Boston to Cambridge Asynchronous replicate from Cambridge to New York
- C. Synchronous replicate from Boston to Cambridge Synchronous replicate from Cambridge to New York
- **D. Synchronous replicate from Boston to Cambridge Asynchronous replicate from Boston to New York**

Answer: D

Explanation:

Dell Unity XT offers both synchronous and asynchronous replication to protect data and ensure business continuity.

Synchronous replication is used for zero RPO, ensuring no data loss, but it is typically limited to shorter distances due to latency concerns.

Asynchronous replication is suitable for longer distances and provides near real-time data protection with a minimal RPO.

Distance Considerations:

The distance between Boston and Cambridge (8 km) is suitable for synchronous replication, providing zero RPO.

The distance between Boston and New York (342 km) is better suited for asynchronous replication due to latency, ensuring data recovery with a minimal RPO, such as 15 minutes.

Optimal Replication Strategy:

Synchronous replication from Boston to Cambridge ensures zero RPO for critical data protection.

Asynchronous replication from Boston to New York provides additional data protection with a 15- minute RPO, suitable for longer-distance disaster recovery.
