## Salesforce Sample Questions (Q125-Q130):

### NEW QUESTION # 125

次のコード スニペット を参照してください。

□ 開発者は、特定の条件が満たされた場合に `getFetchLeadList` を呼び出して潜在顧客に関する情報を表示する Lightning Web コンポーネント (LWC) の一部として JavaScript 関数を作成しました。

LWC がセキュリティを維持しながら効率的にデータを表示できるようにするには、開発者が上記の Apex クラスに実装する必要がある 3 つの変更はどれですか?

3 つの答えを選択してください

- A. Apex メソッドに `@AuraEnabled` のアノテーションを付けます。
- B. クラス宣言に `with Sharing` キーワードを実装します。
- C. クラス宣言に `with` キーワードを実装します。
- D. Apex メソッドに `@AuraEnabled(Cacheable=True)` のアノテーションを付けます。
- E. SOQL クエリ内で WHERE 句を使用します。

Answer: A,B,D

Explanation:

The three changes that the developer should implement in the Apex class to ensure the LWC can display data efficiently while preserving security are to annotate the Apex method with `@AuraEnabled`, implement the `with sharing` keyword in the class declaration, and annotate the Apex method with `@AuraEnabled(Cacheable=True)`. The `@AuraEnabled` annotation allows the Apex method to be called from a Lightning web component, and exposes the method to the Lightning Data Service. The `with sharing` keyword enforces the sharing rules and permissions of the current user when accessing the records, and ensures that the data is secure and compliant. The `@AuraEnabled(Cacheable=True)` annotation enables the Apex method to be cached by the Lightning Data Service, and improves the performance and efficiency of the data retrieval. Implement the `without` keyword in the class declaration is not a valid answer, as it ignores the sharing rules and permissions of the current user when accessing the records, and compromises the data security and compliance. Use the `WHERE` clause within the SOQL query is not a valid answer, as it is not a change in the Apex class, and it does not affect the security or efficiency of the data display. - A. `Database.insert(records, false)`
- B. レコードを挿入
- C. 挿入 (レコード、 false)
- D. `Database.insert(records, true)`

Answer: A

### NEW QUESTION # 127

Lightning Web コンポーネントを構築するときに、データ取得で最高のパフォーマンスを得るために開発者が実装する必要がある 3 つのアプローチはどれですか? 3 つの答えを選択してください

- A. 一連のフィールドを表示するには、`layoutTypes: 'Full'` を使用します。
- B. 時々アクセスされるデータには遅延ロードを使用します。
- C. `getRecordUi` を使用してメタデータを取得します。
- D. 可能な限り `{Cacheable=true}` を使用してください
- E. ライティングデータサービスを使用します。

Answer: B,D,E

Explanation:

Lazy loading improves performance by loading data only when needed.

Lightning Data Service (LDS) handles data operations and caching efficiently.

Using {Cacheable=true} on Apex methods enables the Lightning Component framework to cache the method's return value, reducing server round-trips for the same data.

Answer: A

Explanation:

The issue described is a direct result of how Salesforce treats data during sandbox refreshes and unit testing.

Custom Settings (both List and Hierarchy) store their information as data records. By default, sandbox refreshes do not include data records from Production unless it is a Full Sandbox. Furthermore, Apex unit tests are isolated from organization data; they cannot "see" Custom Setting records unless the records are explicitly created within the test or the @isTest(SeeAllData=true) annotation is used (which is a poor practice).

Custom Metadata (Option C) solves this by treating configuration records as metadata rather than data.

Because they are metadata, the records are automatically included in every sandbox refresh and are deployable via Change Sets or the Salesforce CLI. Most importantly, Custom Metadata is visible to Apex unit tests without needing to create setup data or bypass test isolation. This ensures that configuration-dependent logic remains consistent across all environments and that tests pass reliably after a refresh. Replacing Custom Settings with Custom Metadata is the modern Salesforce standard for environment-independent configuration management.
