최신 Value Methodology VMA 무료샘플문제 (Q14-Q19):

질문 # 14

Which of the following is a basic function of a bicycle?

- A. Transport Mass
- B. Move People
- C. Transport Goods
- D. Provide Transportation

정답: D

설명:

Function Analysis in Value Methodology involves identifying and classifying functions using verb-noun combinations, as taught in the VMF 1 course (Core Competency #2). The basic function of an item is its primary purpose-what it must do to fulfill its intended use. For a bicycle, the basic function is the most general and essential action it performs. According to SAVE International's Value Methodology Standard, functions should be defined in broad, measurable terms (e.g., verb-noun format) to capture the core purpose.

The basic function of a bicycle is to "provide transportation," as this encompasses its primary role of enabling movement for people or goods.

* Option A (Transport Mass) is incorrect because "mass" is too vague and not specific to the bicycle's purpose; it could apply to any object being moved.

* Option B (Move People) is incorrect because, while a bicycle often moves people, this is a secondary function-bicycles can also transport goods (e.g., in cargo bikes), so it's not the most fundamental function.

* Option C (Provide Transportation) is correct because it captures the bicycle's primary purpose in the broadest sense, covering both people and goods, aligning with VM's focus on defining basic functions at a high level.

* Option D (Transport Goods) is incorrect because transporting goods is a specific use case, not the bicycle's primary function, which is broader.

SAVE International, VMF 1 Core Competency #2 (Function Analysis), which includes defining basic functions using verb-noun combinations.

SAVE International, "Value Methodology Standard," section on Function Analysis, emphasizing the identification of basic functions as the core purpose of an item.

질문 # 15

What is the objective of the Creativity Phase?

- A. Develop improvement ideas
- B. Select improvement ideas
- **C. Generate improvement ideas**
- D. Prioritize improvement ideas

정답: C

설명:

The Creativity Phase (also known as the Creative Phase) is the third phase of the Value Methodology (VM) Job Plan, as taught in the VMF 1 course (Core Competency #6: Creative Thinking and Idea Generation).

According to SAVE International's Value Methodology Standard, "the objective of the Creativity Phase is to generate a large quantity of improvement ideas through brainstorming and other creative techniques, focusing on alternative ways to perform the functions identified in the Function Analysis Phase." This phase emphasizes divergent thinking to produce as many ideas as possible without judgment, as supported by the ground rules discussed in Question 10 (e.g., encouraging openness, freewheeling, and recording ideas). The generated ideas are then evaluated in the next phase (Evaluation Phase).

* Option A (Develop improvement ideas) is incorrect because development occurs in the Development Phase, where selected ideas are refined into actionable proposals, not in the Creativity Phase.

* Option B (Select improvement ideas) is incorrect because selection occurs in the Evaluation Phase, not Creativity.

* Option C (Prioritize improvement ideas) is incorrect because prioritization also occurs in the Evaluation Phase (as noted in Question 33 with the coarse-medium-fine filters).

* Option D (Generate improvement ideas) is correct, as it matches the primary objective of the Creativity Phase in the VM Job Plan.

:

SAVE International, "Value Methodology Standard and Body of Knowledge," available at <https://www.value-eng.org>, detailing the Creativity Phase's objective to generate ideas.

SAVE International, VMF 1 Core Competency #6 (Creative Thinking and Idea Generation), emphasizing idea generation as the goal of the Creativity Phase.

질문 # 16

Which of the following defines the effects of time, value, and money, converting all costs to a common reference point in today's dollars?

- A. Discount Rate
- B. Present Worth (or Net Present Value)
- C. Return on Investment (ROI)
- D. Simple Payback (or Breakeven Point)

정답: B

설명:

In Value Methodology, cost analysis often involves evaluating the economic impact of alternatives over time, which requires understanding the time value of money. The VMF 1 course, under Core Competency #4 (Cost Analysis), includes financial concepts like discounting cash flows to assess long-term value. The concept of converting all costs to a common reference point in today's dollars refers to Present Worth (or Net Present Value, NPV). According to SAVE International's Value Methodology Standard, Present Worth (or NPV) is used to "evaluate the economic feasibility of alternatives by discounting future cash flows to their present value, accounting for the time value of money." This process converts all costs and benefits (adjusted for time, value, and money) to a single value in today's dollars using a discount rate, allowing for a fair comparison of alternatives.

- * Option A (Return on Investment or ROI) is incorrect because ROI measures profitability as a percentage and does not convert costs to a present value.
- * Option B (Present Worth or Net Present Value) is correct because NPV accounts for the effects of time, value, and money by discounting future cash flows to today's dollars.
- * Option C (Discount Rate) is incorrect because the discount rate is the rate used in NPV calculations, not the method of converting costs itself.
- * Option D (Simple Payback or Breakeven Point) is incorrect because payback measures the time to recover an investment and does not account for the time value of money or convert costs to present value.

:

SAVE International, "Value Methodology Standard and Body of Knowledge," available at <https://www.value- eng.org>, section on cost analysis, referencing Present Worth (NPV) for economic evaluation.

SAVE International, VMF 1 Core Competency #4 (Cost Analysis), which includes discounting techniques for comparing alternatives.

질문 #17

A Random Function Identification table contains:

- A. Costs, time, and risks
- B. Components, resources, and criteria
- C. Elements, functions, and classifications
- D. Inputs, objectives, and sequence

정답: C

설명:

Random Function Identification is a technique used in Value Methodology's Function Analysis phase to identify and organize functions before creating a Function Analysis System Technique (FAST) diagram, as taught in the VMF 1 course (Core Competency #2). According to SAVE International's Value Methodology Standard, Random Function Identification involves "listing all functions of a system or project in a table, typically including the elements (components or parts), their associated functions (in verb-noun format), and their classifications (e.g., basic, secondary, higher-order)." This table helps the VM team systematically identify and categorize functions during the early stages of analysis, ensuring all functions are captured before structuring them in a FAST diagram.

- * Option A (Inputs, objectives, and sequence) is incorrect because inputs and objectives are part of the Information Phase, and sequence is addressed in FAST diagramming, not in the Random Function Identification table.
- * Option B (Costs, time, and risks) is incorrect because these are related to cost analysis or implementation planning, not function identification.
- * Option C (Elements, functions, and classifications) is correct, as it aligns with the purpose of the Random Function Identification table in VM.
- * Option D (Components, resources, and criteria) is incorrect because resources and criteria are not part of function identification; criteria are used in the Evaluation Phase.

:

SAVE International, VMF 1 Core Competency #2 (Function Analysis), which includes Random Function Identification as a precursor to FAST diagramming.

SAVE International, "Value Methodology Standard," section on Function Analysis, describing the Random Function Identification table as listing elements, functions, and classifications.

질문 # 18

The Development Phase involves which of the following steps?

- A. Model the cost of ideas
- B. Assign ideas to VM study team members
- C. Prioritize ideas
- D. Determine verb-noun combinations for ideas

정답: A

설명:

The Development Phase of the Value Methodology (VM) Job Plan, as outlined in the VMF 1 course and SAVE International's Value Methodology Standard, involves refining the most promising ideas selected during the Evaluation Phase into actionable proposals. According to VMF 1 Core Competency #3 (Value Methodology Job Plan), the Development Phase includes "developing detailed proposals for the selected alternatives, including cost estimates, implementation plans, and risk assessments to ensure feasibility." A key step in this phase is modeling the cost of ideas to provide stakeholders with a clear understanding of the financial impact of the proposed changes, ensuring the ideas improve value (function/cost).

* Option A (Assign ideas to VM study team members) is incorrect because assigning ideas occurs during the Creative or Evaluation Phase, not Development.

* Option B (Prioritize ideas) is incorrect because prioritization happens in the Evaluation Phase, before Development.

* Option C (Model the cost of ideas) is correct, as the Development Phase focuses on creating detailed proposals, which includes costing out the ideas to validate their value improvement potential.

* Option D (Determine verb-noun combinations for ideas) is incorrect because verb-noun combinations are used in the Function Analysis Phase to define functions, not in Development.

:

SAVE International, "Value Methodology Standard and Body of Knowledge," available at <https://www.value-eng.org>, detailing the Development Phase in the VM Job Plan.

SAVE International, "Value Methodology Associate (VMA) Certification," <https://www.value-eng.org/page/VMA>, referencing VMF 1 Core Competency #3 (Value Methodology Job Plan).
