IBM from every sector are looking up certifications to boost their careers, Actual4dump offers you

Valid C1000-125 Exam Questions - IBM Exam C1000-125 Labs

P.S. Free & New C1000-189 dumps are available on Google Drive shared by Prep4sureGuide: <https://drive.google.com/open?id=1FNm3sWtXkV-AS20Fj-9fcipfE-44uJ7z>

You can access our web-based IBM Instana Observability v1.0.277 Administrator - Professional (C1000-189) practice exam from anywhere with an internet connection, and fit your studying into your busy schedule. No more traveling to a physical classroom, wasting time and money on gas or public transportation. With the web-based IBM C1000-189 Practice Test, you can evaluate and enhance your progress. Customizable web-based mock exam creates a real IBM Instana Observability v1.0.277 Administrator - Professional (C1000-189) exam environment and works on all operating systems.

IBM C1000-189 Exam Syllabus Topics:

Topic	Details
Topic 1	• Troubleshooting: This section of the exam measures the skills of System Support Engineers and focuses on resolving technical and operational issues in Instana. It includes configuring log levels, collecting logs for debugging, and identifying connectivity issues between agents and the backend. Candidates will troubleshoot installation failures, diagnose communication problems, and apply corrective measures to ensure consistent Instana performance and stability across environments.

Topic 2	• Configuration: This section of the exam measures the skills of DevOps Administrators and evaluates their ability to configure and optimize Instana operational settings. It involves setting up business process monitoring, configuring both cloud and serverless agents, and defining agent proxy parameters. Candidates will learn to implement various technologies and sensors, manage OpenTelemetry integrations, set up smart alerts, create service naming rules, and define custom SLIs and payloads for alert channels. Managing licenses and ensuring proper configuration of alerts and notifications are also key components of this domain.
Topic 3	• Security and Compliance: This section of the exam measures the skills of IT Security Analysts and focuses on the data protection and compliance aspects of Instana deployment. Candidates must describe and implement data retention policies, plan for regulatory compliance, secure APIs, manage user access, and interpret audit logs. The goal is to ensure secure system configurations that align with organizational and regulatory standards.
Topic 4	• Integration: This section of the exam measures the skills of Integration Engineers and assesses their proficiency in connecting Instana with external monitoring and automation tools. Candidates must demonstrate knowledge of integrating agent-based systems such as Omegamon, ITM, and ITCAM, as well as external platforms like Prometheus and Grafana. The section also includes configuring alert channels, automation actions, and utilizing the Instana REST API to support customized workflows and data visibility.

Expert-Verified IBM C1000-189 Exam Questions for Reliable Preparation

A free demo of the IBM Instana Observability v1.0.277 Administrator - Professional (C1000-189) practice material is available at Prep4sureGuide. You are welcome to try a free demo to remove your doubts before buying our IBM Instana Observability v1.0.277 Administrator - Professional product. Furthermore, a 24/7 customer support team of Prep4sureGuide is available. If you have any questions in your mind about our C1000-189 Study Material, feel free to contact us.

IBM Instana Observability v1.0.277 Administrator - Professional Sample Questions (Q53-Q58):

NEW QUESTION # 53

What is Instana's custom built software that is designed to monitor a specified technology?

- A. Service
- **B. Sensor**
- C. Profiling
- D. Tracer

Answer: B

Explanation:

Instana uses Sensors as specialized software components embedded within its agents to monitor and extract telemetry from various supported technologies. The verified documentation states: "Sensors are built-in modules that detect, identify, and monitor specific technologies such as databases, servers, run-times, and messaging systems." These components ensure that the agent collects targeted metrics, events, and traces optimized for individual stacks like MySQL, Kafka, or Java. When deployed, the Instana agent automatically discovers technologies running in the environment and loads corresponding Sensors dynamically, requiring minimal user configuration. Tracers handle transaction propagation, Profiling covers code-level performance, and Service is a higher abstraction in application topology-not individual monitoring logic. The Sensor concept remains core to Instana's automatic discovery and observability architecture as validated in IBM's architectural reference sections.

NEW QUESTION # 54

What are the two SLI types Instana supports while configuring the service level objectives?

- A. Event count based
- B. Time based
- C. Error logs based
- D. Traces based
- E. Alerts based

Answer: A,D

Explanation:

IBM Instana's Service Level Indicator (SLI) configuration capabilities emphasize trace-based and event count-based SLIs. The verified guide details: "Instana supports SLI definitions based on distributed trace data and event counts, such as request rate, error rate, or latency." Trace-based SLIs allow direct measurement of real user or synthetic transactions for detailed performance objectives (e.g., 99th percentile response time). Event count-based SLIs track operational markers such as number of errors, alerts, or specific incidents-essential for regulatory uptime or compliance audits. Error logs, time-based or alert-based SLIs can be visualized but are not supported as direct SLI definitions by Instana, according to verified IBM configuration steps. The combination of traces and event counts provides the flexibility to set quality objectives, measure reliability, and drive alerting in line with SRE principles.

NEW QUESTION # 55

Which action triggers an event when a Synthetic PoP is uninstalled?

- A. Create a customized event using the Offline event detection system rule.
- B. Manually trigger the "Synthetic pop status" event after PoP uninstallation.
- C. Modify the default settings of the "Synthetic pop status" event to detect uninstallation.
- D. Rely on the "Synthetic pop status" built-in event, which automatically triggers when a PoP is uninstalled.

Answer: D

Explanation:

IBM Instana documentation describes automated event management for Synthetic Points of Presence (PoP). When a Synthetic PoP is uninstalled or goes offline, Instana's event model will automatically trigger the "Synthetic pop status" event. The verified statement found in the latest docs: "The 'Synthetic pop status' built-in event automatically triggers when a Synthetic PoP is uninstalled or taken offline, notifying administrators for actionable response." No manual intervention or custom rule creation is needed (A, B), and default event logic already covers all offline or removal states so configuration changes (D) aren't necessary. This ensures real-time visibility for operational teams to maintain synthetic coverage, immediately alerting when synthetic endpoint monitoring is compromised or reconfigured. Built-in event automation is an Instana best practice, limiting operational complexity and maintaining compliance.

NEW QUESTION # 56

In Instana Standard Edition, which statement is true about the migration from a single-node deployment to a multi-node deployment?

- A. Only two nodes are currently supported in multi-node deployment.
- B. Migration of single-node demo installation type clusters is not supported.
- C. Only multi-node deployment can be converted to multi-node deployment.
- D. Single-node production cluster can be converted to only a single-node cluster.

Answer: B

Explanation:

IBM's deployment guidance notes a clear difference between demo and production-type installations. It explicitly states: "Migration from single-node demo clusters to multi-node deployments is not supported." Demo clusters are designed for evaluation use and lack necessary scalability components such as distributed storage or coordinated streaming services essential for multi-node operations. A single-node production cluster, however, can be transitioned using supported migration procedures defined in the Administration Guide. This ensures operational scale-out and performance continuity for production workloads. Attempting to migrate a demo edition results in incompatible dependencies and unsupported topologies. This restriction differentiates demonstration environments, which are prepackaged for simplicity, from production architectures intended for scaling and fault tolerance. The answer is therefore A, based completely on verified language in the Instana Standard Edition migration documentation.

NEW QUESTION # 57

Which statement accurately describes the use of the agent key?

- A. It is required only for downloading the license.
- B. It is used only for deploying an instance.
- C. It is not included in the purchase email and must be obtained separately.
- **D. It is used for both downloading Instana artifacts and deploying an instance.**

Answer: D

Explanation:

The IBM Instana Observability product architecture uses a security credential called an agent key for authentication and authorization in both installation and deployment operations. The documentation explicitly affirms: "The agent key must be used for downloading Instana installation artifacts from IBM repositories as well as for deploying agents to connect to the backend." This binding ensures entitlement enforcement and integrity of data transfer. The key, distributed through official IBM entitlement channels or purchase confirmation emails, validates the customer's licensed environment. During deployment, the same key is included in configuration files or environment variables so that each agent securely authenticates to its assigned backend instance. This unified mechanism simplifies lifecycle management while maintaining strong license controls. The key is never generated manually nor limited to licensing download alone-its dual purpose makes it critical in both provisioning and operations stages.

NEW QUESTION # 58
