## Salesforce Certified Platform Identity and Access Management Architect

## Sample Questions (Q168-Q173):

### NEW QUESTION # 168

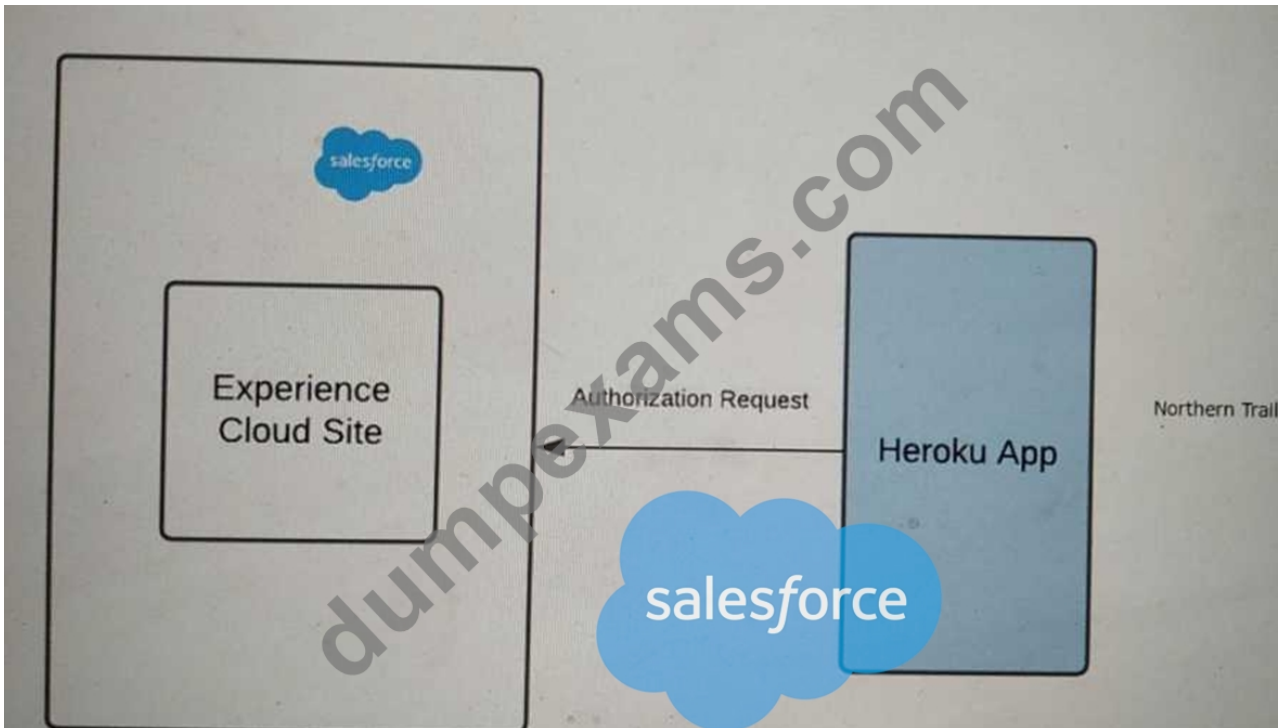

Universal Containers (UC) wants to implement a partner community. As part of their implementation, UC would like to modify both the Forgot password and change password experience with custom branding for their partner community users. Which 2 actions should an architect recommend to UC? Choose 2 answers

- A. Build a community builder page for both the change password and Forgot password experiences.
- B. Build a custom visualforce page for both the change password and Forgot password experiences.
- C. Build a custom visualforce page for the change password experience and a community builder page for the Forgot password experience.
- D. Build a community builder page for the change password experience and Custom Visualforce page for the Forgot password experience.

Answer: B,C

### NEW QUESTION # 169

Refer to the exhibit.

Outfitters (NTO) is using Experience Cloud as an Identity for its application on Heroku. The application on Heroku should be able to handle two brands, Northern Trail Shoes and Northern Trail Shirts. A user should select either of the two brands in Heroku before logging into the community. The app then performs Authorization using OAuth2.0 with the Salesforce Experience Cloud site. NTO wants to make sure it renders login page images dynamically based on the user's brand preference selected in Heroku before Authorization. What should an identity architect do to fulfill the above requirements?

- A. Authorize third-party service by sending authorization requests to the community-url/services/oauth2/authorize/cookie\_value.
- B. For each brand create different communities and redirect users to the appropriate community using a custom Login controller written in Apex.
- C. Create multiple login screens using Experience Builder and use Login Flows at runtime to route to different login screens.
- D. Authorize third-party service by sending authorization requests to the community-url/services/oauth2/authorize/expid\_value.

Answer: D

### NEW QUESTION # 170

An architect needs to advise the team that manages the identity provider how to differentiate Salesforce from other service providers.

What SAML SSO setting in salesforce provides this capability?

- A. Identity provider login URL
- B. Issuer
- C. SAML identity location
- **D. Entity id**

**Answer: D**

#### **NEW QUESTION # 171**

A large consumer company is planning to create a community and will require login through the customers social identity. The following requirements must be met:

1. The customer should be able to login with any of their social identities, however salesforce should only have one user per customer.
2. Once the customer has been identified with a social identity, they should not be required to authorize Salesforce.
3. The customers personal details from the social sign on need to be captured when the customer logs into Salesforce using their social Identity.
3. If the customer modifies their personal details in the social site, the changes should be updated in Salesforce .

Which two options allow the Identity Architect to fulfill the requirements?

Choose 2 answers

- **A. Use the custom registration handler to link social identities to Salesforce identities.**
- B. Use Login Flows to call an authentication registration handler to provision the user before logging the user into the community.
- C. Redirect the user to a custom page that allows the user to select an existing social identity for login.
- **D. Use authentication providers for social sign-on and use the custom registration handler to insert or update personal details.**

**Answer: A,D**

#### **NEW QUESTION # 172**

What item should an Architect consider when designing a Delegated Authentication implementation?

- A. The web service should use the Salesforce Federation ID to identify the user.
- B. The Web service should be able to accept one to four input method parameters.
- C. The Web service should implement a custom password decryption method.
- **D. The Web service should be secured with TLS using Salesforce trusted certificates.**

**Answer: D**

#### **NEW QUESTION # 173**

.....
