High Pass Rate NS0-094 Exam Guide - NS0-094 Latest Practice Dumps

Pass4training have a professional IT team to do research for practice questions and answers of the Network Appliance NS0-094 exam certification exam. They provide a very effective training tools and online services for your. If you want to buy Pass4training products, Pass4training will provide you with the latest, the best quality and very detailed training materials as well as a very accurate exam practice questions and answers to be fully prepared for you to participate in the Network Appliance Certification NS0-094 Exam. Safely use the questions provided by Pass4training's products. Selecting the Pass4training is equal to be 100% passing the exam.

Network Appliance NetApp Hardware Support Engineer Professional Exam Sample Questions (Q19-Q24):

NEW QUESTION # 19

Which command can you use to confirm successful completion of an ONTAP upgrade?

- A. job show -jobtype upgrade
- B. system controller sp upgrade show
- C. cluster image show-update-progress
- D. system node upgrade-revert upgrade-task -node <nodename> -version <ontap Version>

Answer: C

Explanation:

To confirm the successful completion of an ONTAP upgrade, the cluster image show-update- progress command provides the necessary details.

Key Command:

Command:

cluster image show-update-progress

Displays the status of the cluster upgrade, including which nodes have successfully upgraded and whether the process has completed.

NEW QUESTION # 20

A customer reports intermittent cluster communication failures after moving equipment to a new rack. Which issue is MOST likely?

- A. Incorrect rack cabling or interconnect placement
- B. ONTAP licensing expiration
- C. Disk encryption mismatch
- D. Excessive aggregate snapshots

Answer: A

Explanation:

After physical relocation, cabling errors and incorrect interconnect placement are common causes of intermittent cluster communication failures. Engineers should inspect physical topology and verify port mapping carefully. Snapshot counts and licensing issues generally do not create intermittent cluster network instability.

NEW QUESTION # 21

What happens when the command diskcopy is run from nodeshell?

- A. It triggers a RAID reconstruction of that disk.
- B. It copies the disk content to a specified volume.
- C. It pre-fails a drive in an aggregate and copies it to a spare.
- D. It performs a low-level copy of the disk to another disk.

Answer: D

Explanation:

Purpose of the diskcopy Command:

The diskcopy command is used in the ONTAP nodeshell environment to perform a low-level sector-by-sector copy of data from one disk to another. This is typically used during data recovery or diagnostics.

How It Works:

The command copies all sectors from the source disk to the destination disk without any regard for file system or metadata structures.

It is commonly used when replicating the exact state of a failing disk to a spare for further analysis or recovery.

Key Notes:

The destination disk must be of the same or larger capacity than the source disk. The operation is typically disruptive and not suitable for production use.

NEW QUESTION # 22

In the latest MANAGEMENT LOG AutoSupport message, you try to inspect the ENVIRONMENT section but find it empty. In which section of AutoSupport can you find the reason?

- A. MANIFEST.XML

- B. HEADERS
- C. AUTOSUPPORT-HISTORY.XML
- D. AUTOSUPPORT-BUDGET.XML

Answer: D

Explanation:

If the ENVIRONMENT section of the latest MANAGEMENT LOG AutoSupport message is empty, the reason can typically be found in the AUTOSUPPORT-BUDGET.XML file. This file contains information about AutoSupport resource allocation, including what sections were processed and any limits that were hit.

Key Details:

AUTOSUPPORT-BUDGET.XML:

This file provides a summary of the resources (budget) allocated for different AutoSupport sections. If the ENVIRONMENT section is missing or empty, the AUTOSUPPORT-BUDGET.XML file will indicate whether it was skipped due to resource constraints or configuration limits.

NEW QUESTION # 23

What should be the first step taken after detecting a NetApp WAFL inconsistency?

- A. Stabilize the system
- B. Run waffiron.
- C. Force offline the affected aggregate.
- D. Run a dump to null.

Answer: A

Explanation:

When a WAFL inconsistency is detected, the first step is to stabilize the system before attempting any repairs or recovery.

Steps to Handle WAFL Inconsistency:

Stabilize the System:

Ensure that the system is not experiencing ongoing hardware or software issues.

Avoid making changes to the affected aggregate or volume until the system is stable.

Assess the Impact:

Determine which aggregates or volumes are affected and the severity of the inconsistency.

NEW QUESTION # 24

.....

While using this Network Appliance NS0-094 practice exam software, you can easily customize your Network Appliance NS0-094 mock exam conditions such as exam duration, number of questions, and many more. These Network Appliance NS0-094 bear the closest resemblance to the actual NS0-094 dumps that will be asked of you in the exam.
