Excellent Identity-and-Access-Management-Architect Training Tools, Ensure to pass the Identity-and-Access-Management-Architect Exam

Believe in yourself, choosing the Identity-and-Access-Management-Architect study guide is the wisest decision. So far, the Identity-and-Access-Management-Architect practice materials have almost covered all the official test of useful Identity-and-Access-Management-Architect exam materials, before our products on the Internet, all the Identity-and-Access-Management-Architect study materials are subject to rigorous expert review, so you do not have to worry about quality problems of our latest Identity-and-

Access-Management-Architect Exam Torrent, focus on the review pass the Identity-and-Access-Management-Architect qualification exam. I believe that through these careful preparation, you will be able to pass the exam.

Salesforce Certified Identity and Access Management Architect Sample Questions (Q16-Q21):

NEW QUESTION # 16

A multinational company is looking to rollout Salesforce globally. The company has a Microsoft Active Directory Federation Services (ADFS) implementation for the Americas, Europe and APAC. The company plans to have a single org and they would like to have all of its users access Salesforce using the ADFS. The company would like to limit its investments and prefer not to procure additional applications to satisfy the requirements.

What is recommended to ensure these requirements are met ?

- A. Add a central identity system that federates between the ADFS systems and integrate with Salesforce for single sign-on.
- B. Configure Each ADFS system under single sign-on settings and allow users to choose the system to authenticate during sign on to Salesforce-
- C. Implement Identity Connect to provide single sign-on to Salesforce and federated across multiple ADFS systems.
- D. Use connected apps for each ADFS implementation and implement Salesforce site to authenticate users across the ADFS system applicable to their geo.

Answer: C

NEW QUESTION # 17

A leading fitness tracker company is getting ready to launch a customer community. The company wants its customers to login to the community and connect their fitness device to their profile. Customers should be able to obtain exercise details and fitness recommendation in the community.

Which should be used to satisfy this requirement?

- A. Login Flows
- B. Named Credentials
- C. OAuth Device Flow
- D. OAuth Asset Token flow

Answer: D

Explanation:

The OAuth 2.0 Asset Token Flow is Salesforce's purpose-built answer for connected devices and IoT-style integrations. It is designed for assets that need to act on behalf of a physical device or asset record rather than a human user. That makes it the correct fit for sensors, GPS trackers, or smart devices that must securely post telemetry or create service actions in Salesforce. User-agent, web-server, or username-password flows are built around user identity or generic application access, not around a registered device/asset relationship. The architectural advantage of the asset token model is that it ties the authorization context back to the asset, which is exactly what you want when the platform must know which device generated the event or maintenance alert. This is why option D is the best answer in Salesforce terms.

NEW QUESTION # 18

How should an identity architect automate provisioning and deprovisioning of users into Salesforce from an external system?

- A. Call OpenID Connect (OIDC)-userinfo endpoint with a valid access token.
- B. Use Security Assertion Markup Language Just-in-Time (SAML JIT) on incoming SAML assertions.
- C. Call SOAP API upsertQ on user object.
- D. Run registration handler on incoming OAuth responses.

Answer: D

NEW QUESTION # 19

A third-party app provider would like to have users provisioned via a service endpoint before users access their app from Salesforce.

What should an identity architect recommend to configure the requirement with limited changes to the third-party app?

- A. Use Salesforce identity with Security Assertion Markup Language (SAML) for provisioning users.
- **B. Use a connected app with user provisioning flow.**
- C. Create Canvas app in Salesforce for third-party app to provision users.
- D. Redirect users to the third-party app for registration.

Answer: B

Explanation:

Explanation

To have users provisioned via a service endpoint before users access their app from Salesforce, the identity architect should recommend using a connected app with user provisioning flow. A connected app is a framework that enables an external application to integrate with Salesforce using APIs and standard protocols.

A user provisioning flow is a custom post-authentication process that can be used to create or update users in the external application using a service endpoint when users access the connected app from Salesforce. This approach can provide automatic user provisioning with limited changes to the third-party app. References:

Connected Apps, User Provisioning for Connected Apps

NEW QUESTION # 20

Northern Trail Outfitters is implementing a business-to-business (B2B) collaboration site using Salesforce Experience Cloud. The partners will authenticate with an existing identity provider and the solution will utilize Security Assertion Markup Language (SAML) to provide single sign-on to Salesforce. Delegated administration will be used in the Experience Cloud site to allow the partners to administer their users' access.

How should a partner identity be provisioned in Salesforce for this solution?

- A. Create only a contact.
- **B. Create a user and a related contact.**
- C. Create a contactless user.
- D. Create a person account.

Answer: B

Explanation:

To provision a partner identity in Salesforce for a B2B collaboration site using SAML SSO, the identity architect should create a user and a related contact. A user record is required to authenticate and authorize the partner to access Salesforce resources. A contact record is required to associate the partner with an account, which represents the partner's organization. A contactless user or a person account are not supported for B2B collaboration sites. References: User and Contact Records for Partner Users, Create Partner Users

NEW QUESTION # 21

.....

To let the clients have an understanding of their mastery degree of our Identity-and-Access-Management-Architect study materials and get a well preparation for the test, we provide the test practice software to the clients. The test practice software of Identity-and-Access-Management-Architect study materials is based on the real test questions and its interface is easy to use.
