CompTIA PenTest+ Exam Sample Questions (Q288-Q293):

NEW QUESTION # 288
A penetration tester has adversely affected a critical system during an engagement, which could have a material impact on the organization. Which of the following should the penetration tester do to address this issue?

- A. Restore the configuration.
- B. Select the target.
- C. Perform a BIA.
- D. Follow the escalation process.

Answer: D

Explanation:
If a penetration tester unintentionally disrupts a critical system, they must immediately follow the client's escalation process to ensure proper handling.
Follow the escalation process (Option C):
The penetration testing engagement follows a predefined incident response and escalation plan.
The tester documents the issue, informs stakeholders, and works with IT teams to minimize impact.
Reference: CompTIA PenTest+ PT0-003 Official Study Guide - "Incident Handling and Escalation During Testing" Incorrect options:
Option A (Restore the configuration): Unauthorized changes could violate the engagement scope.
Option B (Perform a BIA): Business Impact Analysis (BIA) is for risk management, not an immediate response.
Option D (Select the target): The target was already chosen; this option is irrelevant.

NEW QUESTION # 289
Which of the following is the most secure way to protect a final report file when delivering the report to the client/customer?

- A. Creating a link on a cloud service and delivering it by email
- B. Copying the file on a USB drive and delivering it by postal mail
- C. Asking for a PGP public key to encrypt the file
- D. Requiring FTPS security to download the file

Answer: C

Explanation:
Using PGP (Pretty Good Privacy) encryption ensures that the report file is securely encrypted with the client's public key. Only the client can decrypt the file using their private key, ensuring confidentiality during transit.

NEW QUESTION # 290

A penetration tester is performing an assessment for an organization and must gather valid user credentials.
Which of the following attacks would be best for the tester to use to achieve this objective?

- A. Deauthentication
- B. Impersonation
- C. Captive portal
- D. Wardriving

Answer: B

Explanation:
Impersonation attacks involve the penetration tester assuming the identity of a valid user to gain unauthorized access to systems or information. This method is particularly effective for gathering valid user credentials, as it can involve tactics such as phishing, social engineering, or exploiting weak authentication processes. The other options, such as Wardriving, Captive portal, and Deauthentication, are more focused on wireless network vulnerabilities and are less direct in obtaining user credentials.

NEW QUESTION # 291

A penetration tester completed a vulnerability scan against a web server and identified a single but severe vulnerability.
Which of the following is the BEST way to ensure this is a true positive?

- A. Look for the vulnerability online.
- B. Perform a manual test on the server.
- C. Check the results on the scanner.
- D. Run another scanner to compare.

Answer: B
