PRINCE2 methodology is widely used in project management and is recognized as a best practice approach to managing projects. On the other hand, Agile methodologies are becoming increasingly popular due to their flexibility and ability to adapt to changing project requirements. PRINCE2 Agile Foundation certification combines the two methodologies, enabling project managers to benefit from the best of both worlds and deliver successful projects.

PRINCE2 Agile Foundation Sample Questions (Q107-Q112):

NEW QUESTION # 107

Which artifact identifies risks associated with using an iterative project management approach?

- A. Definition of Done
- B. Risk management approach
- **C. Agilometer**
- D. Project backlog

Answer: C

Explanation:

The Agilometer is a diagnostic tool used within PRINCE2 Agile to assess the agility maturity and identify risks associated with adopting or operating in an iterative and agile environment. It helps teams and organizations evaluate their current agile capabilities, cultural readiness, and potential challenges that may impact project delivery.

The Agilometer highlights risk areas such as resistance to change, lack of agile skills, unclear roles, or insufficient governance adaptation. By providing a structured assessment, it enables proactive risk management and targeted improvements to reduce uncertainties inherent in iterative approaches.

Other artifacts like the project backlog (A) track requirements, the risk management approach (C) defines the method of managing risks but does not specifically identify iterative risks, and the Definition of Done (D) clarifies completion criteria rather than risks.

The Agilometer supports continuous improvement and risk mitigation aligned with PRINCE2's risk and quality practices, ensuring agile projects remain viable and controlled.

NEW QUESTION # 109

When should PRINCE2 Agile be used?

- A. When simple requests to update a product are implemented
- B. When a team is created to deliver a specific product
- C. When delivering an ongoing service to a customer
- **D. When an established team performs product maintenance**

Answer: D

NEW QUESTION # 110

What needs to happen when new detailed requirements are added to a timebox?

- A. More people should be added to the delivery team
- B. Formal change control should be applied
- C. Requirements of a similar level of effort should be removed
- D. The delivery milestones should be reviewed and re-planned

Answer: C

NEW QUESTION # 111

What is the purpose of the 'progress' practice?

- A. To provide a forecast for the project's viability
- B. To identify and assess opportunities and threats
- C. To identify the user needs and requirements
- D. To establish accountability for the project

Answer: A

Explanation:

The Progress practice in PRINCE2 Agile is focused on providing a forecast of the project's viability by monitoring actual progress against plans and predicting future performance. It ensures that decisions can be made based on current status and trends, enabling timely interventions if necessary.

This practice involves collecting progress data, reviewing milestones, updating forecasts, and communicating status to stakeholders. Forecasting viability includes assessing whether the project remains aligned with business justification and expected benefits.

While opportunities and threats are part of risk management (B), user needs belong to requirements management (C), and accountability is a broader governance concern (D), progress specifically deals with tracking and forecasting delivery status.

The practice combines traditional PRINCE2 stage controls with agile iterative reviews, providing an integrated view of progress.
