Unparalleled Key GH-100 Concepts - 100% Pass GH-100 Exam

We have the first-rate information safety guarantee system for the buyers who buy the GH-100 questions and answers of our company, we can ensure that the information of your name, email, or product you buy. We respect the private information of every customer, and we won't send the junk information to you to bother. Besides, you will get GH-100 Questions and answers downloading link within ten minutes, and our system will send you the update version to your mailbox.

Microsoft GH-100 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Manage GitHub Packages: This section of the exam measures skills of GitHub Enterprise Administrators and focuses on managing GitHub Packages, their use in workflows, and how they differ from releases. It involves accessing, writing, and sharing packages across teams while ensuring integration into CI• CD pipelines.
Topic 2	<ul style="list-style-type: none">• Describe how GitHub is deployed, distributed, and licensed: This section of the exam measures skills of GitHub Enterprise Administrators and highlights the deployment models of GitHub Enterprise Server, Enterprise Cloud, and GitHub AE. It covers licensing structures, billing for seat licenses and metered services, support options, and monitoring license usage across users and machine accounts.

Topic 3	<ul style="list-style-type: none"> • Manage user identities and GitHub authentication: This section of the exam measures skills of DevOps Engineers and focuses on managing authentication and identity across organizations using SAML SSO, SCIM, and team synchronization. Candidates need to understand identity providers, user membership implications, authorization models, and enforcing security measures such as two-factor authentication.
Topic 4	<ul style="list-style-type: none"> • Manage GitHub Actions: This section of the exam measures skills of DevOps Engineers and emphasizes managing workflows, reusable actions, and distribution strategies within the enterprise. It explains configuring organization-level policies, managing self-hosted and GitHub-hosted runners, controlling access through IP allow lists, handling encrypted secrets, and integrating third-party vaults for workflow security.
Topic 5	<ul style="list-style-type: none"> • Enable secure software development and ensure compliance: This section of the exam measures skills of GitHub Enterprise Administrators and deals with applying GitHub's security and compliance capabilities. It covers policies, auditing, scrubbing sensitive data, secret scanning, code scanning with CodeQL, dependency management with Dependabot, and implementing security response plans. It also explores authentication tokens, app security policies, and enterprise managed users.
Topic 6	<ul style="list-style-type: none"> • Manage access and permissions based on membership: This section of the exam measures skills of DevOps Engineers and reviews how to manage organizations, teams, and repository permissions. It includes default permission settings, team synchronization through AD, scripting across multiple organizations, and aligning enterprise policies with trust requirements. It also contrasts roles such as organization members, owners, collaborators, and billing managers.

Microsoft GitHub Administration Sample Questions (Q40-Q45):

NEW QUESTION # 40

What additional capability does secret scanning offer for private repositories on GitHub Enterprise Cloud?

- A. Disables any code that contains a secret.
- B. Revokes GitHub access tokens automatically.
- C. Rewrites history to remove secrets.
- **D. Allows custom pattern definitions for internal secret formats.**

Answer: D

Explanation:

Secret scanning in private repositories on GitHub Enterprise Cloud lets you define and use custom regular-expression patterns - so you can detect internal or proprietary secret formats beyond the default partner-provided types.

NEW QUESTION # 41

You discover that a secret (e.g., a token or password) was accidentally committed to a GitHub repository. What is the first step you should take to mitigate the risk?

- A. Delete the repository and create a new one to ensure the secret is no longer accessible.
- B. Contact GitHub Support to remove the secret from all forks and clones of the repository.
- C. Rewrite the repository history using git filter-repo or BFG Repo-Cleaner to remove the secret from all commits.
- **D. Revoke and/or rotate the secret to render it unusable, then assess whether history rewriting is necessary.**

Answer: D

Explanation:

The immediate priority is to revoke or rotate the exposed credential so it can no longer be used; once it's invalidated, you can safely proceed with history-rewriting or other cleanup steps.

NEW QUESTION # 42

Which of the following is a key benefit of setting default read permissions across organizations?

- A. Improves collaboration by allowing users to modify content directly.
- **B. Enhances security by minimizing unintended modifications.**
- C. Increases efficiency in content creation and updates.
- D. Suits environments where all users need write access.

Answer: B

Explanation:

Enforcing a default of Read for organization members ensures they can view content without the ability to push changes, reducing the risk of accidental or unauthorized modifications.

NEW QUESTION # 43

Your enterprise has multiple organizations, and you want to ensure consistent security policies across all teams. Which feature should you use?

- A. Assigning admin permissions to all team members.
- B. Outside collaborators for all repositories.
- **C. Enterprise-level teams with inherited enterprise policies.**
- D. Organization-specific teams with custom policies.

Answer: C

Explanation:

By using enterprise-level teams with inherited enterprise policies, you can group members across all your organizations and enforce the same security settings globally - ensuring every team abides by the enterprise's mandatory policies.

NEW QUESTION # 44

Which of the following actions can a user with Write permissions perform in a GitHub repository?

- A. Delete the repository.
- **B. Push code to non-protected branches.**
- C. Configure branch protection rules.
- D. Manage repository settings, such as labels and GitHub Pages.

Answer: B

Explanation:

Users granted Write permission can push commits to non-protected branches, allowing them to update code without needing administrative rights.

NEW QUESTION # 45

.....

Our GH-100 study materials can satisfy the wishes of our customers for high-efficiency and client only needs to spare little time to prepare for the GH-100 test and focus their main attentions on their major things. As a leader in the career, we have been studying and doing researching on the GH-100 Practice Braindumps for over ten year. We have helped tens of thousands of the candidates successfully passed the exam and achieved their dreams.
