Topic 7	<ul style="list-style-type: none"> • Enterprise Architecture and the TOGAF Standard: In this topic of the OGBA-101 exam, TOGAF business architects learn about the contents of the TOGAF framework, the TOGAF Architecture Development Method (ADM), and the TOGAF Library.

The Open Group TOGAF Business Architecture Foundation Exam Sample Questions (Q56-Q61):

NEW QUESTION # 56

Consider the following statements;

1. A whole corporation or a division of a corporation
 2. A government agency or a single government department
 3. Partnerships and alliances of businesses working together, such as a consortium or supply chain
- What are those examples of according to the TOGAF Standard?

- A. Enterprises
- B. Architectures Scopes
- C. Organizations
- D. Business Units

Answer: A

Explanation:

According to the TOGAF Standard, an enterprise is defined as any collection of organizations that has a common set of goals and/or a single bottom line. The examples given in the question are all types of enterprises that can be the subject of enterprise architecture.

In the context of TOGAF, the term 'enterprise' encompasses more than just a single organization. It refers to any collection of organizations that has a common set of goals. This can include, as described in the statements provided, entire corporations or their divisions, government agencies or departments, as well as business partnerships such as consortia or supply chains. TOGAF uses the term 'enterprise' to define the full scope of the entity that is the subject of planning, design, implementation, and operation of an Enterprise Architecture.

NEW QUESTION # 57

Complete the following sentence:

Presenting different _____ and _____ to stakeholders helps architects to extract hidden agendas, principles, and requirements that could impact the final Target Architecture.

- A. Business Scenarios, Business Models
- B. Architecture Views, Architecture Viewpoints
- C. Solutions, Applications

- D. Alternatives, Trade-offs

Answer: B

Explanation:

Presenting different alternatives and trade-offs to stakeholders is a crucial technique in TOGAF for eliciting valuable feedback and refining the Target Architecture. This approach encourages stakeholders to actively participate in the architecture development process and express their preferences and concerns.

Here's why this approach is effective:

- * Reveals hidden agendas: By presenting different options with varying implications, stakeholders may reveal priorities or concerns that were not explicitly stated before. This helps architects uncover hidden agendas that could influence the architecture's success.
- * Uncovers underlying principles: Stakeholder reactions to different alternatives can reveal their underlying principles and values, providing insights into what they consider important in the architecture.
- * Identifies unspoken requirements: Through discussions and comparisons of alternatives, stakeholders may express needs or requirements that were not captured during initial requirements gathering.

NEW QUESTION # 58

Which of the following is the element of a value stream stage that describes the end state condition denoting the completion of the value stream stage?

- A. Exit criteria
- B. End point
- C. Completion stage
- D. Target state

Answer: A

Explanation:

In the context of a value stream within TOGAF, a value stream stage represents a segment of the overall process that delivers value to stakeholders. Each stage has specific characteristics and elements that help define its progress and completion. The "exit criteria" is a key element that describes the end state condition, denoting the completion of a value stream stage. Here's how TOGAF defines and uses these concepts:

Value Stream Definition:

A value stream represents an end-to-end collection of activities that create a result for a customer, stakeholder, or end-user. It provides a visual representation of how value is delivered.

Value Stream Stages:

Each value stream consists of multiple stages, each contributing to the overall value delivery. These stages need to be clearly defined to ensure the value stream can be effectively managed and improved.

Exit Criteria:

Definition: Exit criteria are the conditions that must be met to signify the completion of a value stream stage. These criteria ensure that all necessary tasks have been completed and that the output meets the required quality and performance standards.

Purpose: By defining exit criteria, organizations can ensure that each stage of the value stream is completed before moving to the next, maintaining quality and consistency across the process.

TOGAF Reference:

Phase B: Business Architecture: In this phase, value streams and their stages are modeled. Defining exit criteria for each stage helps in managing transitions and ensuring that each part of the value stream is delivering the intended value.

In summary, the exit criteria define the end state condition of a value stream stage, ensuring that all necessary tasks are completed and quality standards are met before proceeding to the next stage.

NEW QUESTION # 59

Which statement best describes iteration and the ADM?

- A. The ADM is iterative between phases B to D, and between Phases E and F.
- B. The ADM is iterative, over the whole process, between phases, and within phases.
- C. The level of detail is defined once and applies to all iterations.
- D. The ADM is sequential. Iteration is applied within phases.

Answer: B

Explanation:

TOGAF's ADM (Architecture Development Method) is designed to be iterative at multiple levels: over the whole process, between phases, and within phases. This iterative approach allows for continuous refinement and improvement of the architecture, ensuring it remains aligned with changing business needs and technological advancements. Iteration helps in managing complexity and facilitates incremental development, enabling architects to revisit and adjust their work as new information and insights emerge.

NEW QUESTION # 60

Complete the sentence An information map is a _____.

- A. target description of information assets needed to support the business
- B. collection of information concepts and their relationships to one another
- C. description of the business units that use capabilities and participate in value streams
- **D. representation of where the business information is held within the enterprise**

Answer: D

Explanation:

An information map, in the context of TOGAF and Enterprise Architecture, serves as a visual representation of how information is structured, stored, and accessed within an organization. It essentially provides a map of the information landscape of the enterprise. This includes:

- * Identifying key information assets: This involves pinpointing critical data entities, such as customer data, product information, financial records, etc.
- * Locating information: The map shows where this information resides, whether it's in databases, applications, file systems, or other repositories.
- * Illustrating information flows: It may also depict how information moves between different parts of the organization, highlighting dependencies and relationships.

NEW QUESTION # 61
