

# Free PDF 2026 Efficient HP HPE7-J01: Test Advanced HPE Storage Architect Solutions Written Exam Vce Free

What's more, part of that FreeCram HPE7-J01 dumps now are free: [https://drive.google.com/open?id=1qLw0AC7cpIP\\_dFVoJMHGf46lrqVXzTcu](https://drive.google.com/open?id=1qLw0AC7cpIP_dFVoJMHGf46lrqVXzTcu)

FreeCram is an experienced website with great reputation which offering HP dumps torrent and professional explanations. Our HPE7-J01 test questions are created by our IT elites who pay great attention to the IT exam certification so we can ensure you the authority and reliability of our HPE7-J01 Practice Test.

Even some one can job-hop to this international company. Opportunities are reserved for those who are prepared. Only if you pass the exam can you get a better promotion. And if you want to pass it more efficiently, we must be the best partner for you. Because we are professional HPE7-J01 question torrent provider, we are worth trusting; because we make great efforts, we do better. Here are many reasons to choose us.

>> Test HPE7-J01 Vce Free <<

## High Pass-Rate Test HPE7-J01 Vce Free - 100% Pass HPE7-J01 Exam

You can use this HPE7-J01 practice exam software to test and enhance your Advanced HPE Storage Architect Solutions Written Exam (HPE7-J01) exam preparation. Your practice will be made easier by having the option to customize the HPE7-J01 Exam Dumps. The fact that it runs without an active internet connection is an incredible comfort for users who don't have access to the internet all the time.

## HP Advanced HPE Storage Architect Solutions Written Exam Sample Questions (Q31-Q36):

### NEW QUESTION # 31

A customer is planning a new mission-critical database deployment requiring synchronous replication between two metropolitan data centers separated by 40 km. The solution must provide zero data loss and automatic failover while minimizing application downtime. Which HPE storage technology best meets these requirements?

- A. HPE MSA Snap replication
- **B. HPE Primera Active Peer Persistence**
- C. HPE StoreOnce Catalyst Copy
- D. HPE Alletra 5000 asynchronous replication

**Answer: B**

Explanation:

HPE Primera Active Peer Persistence enables active-active synchronous replication across metro distances, delivering zero RPO and near-zero RTO. It supports transparent automatic failover, which is ideal for mission-critical workloads. Asynchronous solutions introduce data-loss risk, while StoreOnce and MSA replication do not provide this enterprise-grade availability model.

### NEW QUESTION # 32

A storage administrator is configuring a trunk between two Brocade fibre channel switches, but the trunk fails to initialize. What should the administrator do to solve this issue?

- A. Reduce the number of ports in the trunk to 10.
- B. Place the ports in different port groups.
- **C. Install a trunking license.**
- D. Convert the ports to F-ports.

**Answer: C**

Explanation:

In Brocade B-series Fibre Channel fabrics, ISL (Inter-Switch Link) Trunking is an optional licensed feature that allows multiple physical links between two switches to be aggregated into a single logical high-bandwidth pipe. While two switches can connect via a standard ISL without a specific license, the "Trunking" capability—which enables frame-level load balancing across those links—requires the ISL Trunking license to be installed and active on both participating switches.

According to the Brocade Fabric OS Administration Guide, if the license is missing or expired, the ports will function as individual ISLs rather than a unified trunk. This leads to the "failure to initialize" as a trunk, where the ports might stay in a "Master" or "Active" state individually but never form a "Trunk port" relationship. A common troubleshooting step after installing the license is to port-disable and then port-enable the affected ports to force the fabric to re-negotiate the trunking capability.

Options B and D are technically incorrect because trunking specifically requires E\_ports (Expansion Ports) used for switch-to-switch connectivity; converting them to F\_ports (Fabric ports) would make them intended for end-device (host/storage) connectivity, which does not support ISL trunking. Furthermore, for a trunk to form, the ports must be within the same physical port group on the ASIC (e.g., ports 0-7 or 8-15 on many fixed-port switches), making Option D the opposite of what is required for success. By ensuring the Trunking license is present, the administrator enables the hardware and software to utilize the Exchange-Based Routing (EBR) or frame-based trunking protocols necessary for the solution.

### NEW QUESTION # 33

A storage administrator wants to set up NAS replication between two HPE StoreOnce appliances. A corresponding NAS library was created between the two systems, primary and secondary, where the secondary will receive the replicated information. When the administrator tries to create the NAS mapping on the primary StoreOnce solution, the administrator is presented with an error stating they do not have permission. What should the administrator do to solve this issue?

- A. On the primary StoreOnce appliance, generate an access token and configure this token on the secondary StoreOnce appliance.
- B. On the primary StoreOnce appliance, define the secondary StoreOnce appliance, along with the respective username and password.
- **C. On the secondary StoreOnce appliance, define the primary StoreOnce appliance, along with the respective username and**

password.

- D. On the secondary StoreOnce appliance, set the Replication Permissions to allow Enabled Public Access.

**Answer: C**

Explanation:

In the context of HPE StoreOnce Catalyst and NAS replication, security is governed by a bi-directional trust or permission-based handshake. When configuring replication between two StoreOnce appliances, the

"Target" (Secondary) system acts as the gatekeeper. The error described occurs because the primary system is attempting to push data or create a mapping to a destination that has not authorized it.

According to the HPE StoreOnce documentation regarding Replication Permissions, the secondary appliance must explicitly grant permission to the source appliance before any mapping or data transfer can occur. This is a security measure designed to prevent unauthorized data ingestion or "rogue" replication tasks from consuming storage resources on the target system. To resolve the permission error, the administrator must log into the Secondary StoreOnce appliance (the target) and navigate to the replication settings. There, they must add the Primary StoreOnce appliance as an authorized "source" by specifying its network address (FQDN or IP) and providing the necessary credentials (username and password) that the primary system will use to authenticate.

Unlike simpler protocols where a "Public Access" setting (Option B) might exist, HPE StoreOnce requires a defined relationship for NAS and Catalyst replication to ensure data integrity and multi-tenancy security.

Option A refers to token-based authentication, which is more common in modern cloud-native Alletra environments via DSCC, but not the standard for legacy StoreOnce NAS replication. Option D is incorrect because the permission must be granted at the receiving end, not the sending end. Once the secondary system has the primary's details stored in its Replication Permissions list, the primary appliance will be able to successfully "discover" the target libraries and establish the mapping without further permission errors.

#### NEW QUESTION # 34

An administrator has finished installing the Zerto Virtual Manager (ZVM) appliance at a site. The administrator wants to pair the ZVM appliance with a ZVM appliance at another site. Which item is required, besides the Zerto license key, to perform this pairing?

- A. A pairing asymmetric key
- **B. A pairing token**
- C. The username and password for vCenter
- D. A digital certificate from a trusted PKI infrastructure

**Answer: B**

Explanation:

In modern versions of Zerto (specifically starting with Zerto 9.0 and 9.5), the security model for site pairing was significantly enhanced to move away from legacy credential sharing. To establish a secure relationship between two Zerto Virtual Managers (ZVMs), the administrator must utilize a Pairing Token. Architecturally, the pairing process works as a "push-pull" handshake. The administrator first logs into the Target (Remote) ZVM--the site that will receive the replication--and navigates to the "Sites" tab.

There, they select the option to "Generate Pairing Token." This token is a unique, time-sensitive alphanumeric string that acts as a one-time password for the pairing attempt. Once generated, the administrator copies this token and logs into the Source (Local) ZVM. During the "Pair" wizard, they specify the IP address or FQDN of the remote ZVM and paste the pairing token.

According to the HPE Advanced Storage Solutions implementation guides, this token replaces the need for the source site to know the administrative credentials of the remote vCenter or ZVM, thereby adhering to the principle of least privilege. The token typically has a default expiration (e.g., 48 hours) or expires immediately after a successful pairing session. This ensures that even if a token is intercepted, its window of utility is minimal.

#### NEW QUESTION # 35

Which statement is correct about when an HPE Partner runs a CloudPhysics assessment of a customer's third-party storage solution?

- A. The HPE Partner must create custom cards to generate an assessment report for the customer.
- B. The assessment period can last up to 90 days and can be extended for another 90 days.
- **C. The HPE Partner and the customer have access to the same cards in CloudPhysics.**
- D. A premium license must be purchased to assess third-party storage solutions.

**Answer: C**

Explanation:

A foundational principle of the HPE CloudPhysics partner program is transparency and collaboration. When an HPE Partner invites a customer to run a CloudPhysics assessment (using the "Invite Customer" workflow in the Partner Portal), it establishes a shared view of the customer's data center environment.

According to the HPE CloudPhysics Partner and Customer User Guides, both the partner and the customer have access to the same set of analytics "cards" within the platform. This shared visibility is intentional; it allows the partner to act as a "trusted advisor" by walking the customer through the same data visualizations and insights that the partner is using to build their proposal. Whether looking at the "Storage Inventory," "VM Rightsizing," or "Global Health Check" cards, both parties see the same data points, ensuring there is no "black box" logic in the assessment process. While partners have additional administrative tools in their specific Partner Portal (like the ability to manage multiple customer invitations or use the Card Builder for advanced custom queries), the actual environment assessment and the standard reports are based on the core cards available to both accounts.

## NEW QUESTION # 36

.....

Competition appear everywhere in modern society. There are many way to improve ourselves and learning methods of HPE7-J01 exams come in different forms. Economy rejuvenation and social development carry out the blossom of technology; some HPE7-J01 Learning Materials are announced which have a good quality. Certification qualification exam materials are a big industry and many companies are set up for furnish a variety of services for it.

**HPE7-J01 Free Practice:** <https://www.freecram.com/HP-certification/HPE7-J01-exam-dumps.html>

HP Test HPE7-J01 Vce Free Also, it only support running on Java environment, HP Test HPE7-J01 Vce Free Secondly, people are very busy in the modern society, These HP HPE7-J01 questions and Advanced HPE Storage Architect Solutions Written Exam HPE7-J01 practice test software that will aid in your preparation, To make the HP HPE7-J01 exam questions content up-to-date for free of cost up to 365 days after buying them, our certified trainers work strenuously to formulate the exam questions in compliance with the HPE7-J01 dumps, Preparing for the Advanced HPE Storage Architect Solutions Written Exam (HPE7-J01) certification exam can be time-consuming and expensive.

Understanding the After Effects Camera, So we will continue tracking HPE7-J01 and reporting on this topic, Also, it only support running on Java environment, Secondly, people are very busy in the modern society.

## The Best Accurate Test HPE7-J01 Vce Free & Passing HPE7-J01 Exam is No More a Challenging Task

These HP HPE7-J01 questions and Advanced HPE Storage Architect Solutions Written Exam HPE7-J01 practice test software that will aid in your preparation, To make the HP HPE7-J01 exam questions content up-to-date for free of cost up to 365 days after buying them, our certified trainers work strenuously to formulate the exam questions in compliance with the HPE7-J01 dumps.

Preparing for the Advanced HPE Storage Architect Solutions Written Exam (HPE7-J01) certification exam can be time-consuming and expensive.
