Dumps DEP-2025 Cost, DEP-2025 Hot Spot Questions

Probably you've never imagined that preparing for your upcoming DEP-2025 Exam could be easy. The good news is that our DEP-

2025 exam braindumps can help you pass the exam and achieve the certification with the least time and efforts. The excellent DEP-2025 learning questions are the product created by those professionals who have extensive experience of designing exam study material. Just remind you that we have engaged in the career for over ten years and we have became the leader in this field.

Apple Deployment and Management Exam Sample Questions (Q132-Q137):

NEW QUESTION # 132

A user enrolled their personally-owned iPhone in your MDM solution to access organizational services.

Which of these is cryptographically separated for managed and personal data?

- A. Safari profiles
- B. **Calendar**
- C. Safari bookmarks
- D. Contacts

Answer: B

Explanation:

With User Enrollment, Apple provides a privacy-focused management model where organizational and personal data are separated using cryptographic containers. According to Apple Learning, when a user enrolls their personal iPhone, apps like Calendar, Mail, and Notes create distinct data silos for managed accounts. This ensures, for example, that corporate meeting invites remain in the managed calendar and cannot be copied into the personal calendar. Likewise, personal calendar events remain private and untouched by MDM controls. Safari data, bookmarks, and browsing history remain personal and are not cryptographically separated. Contacts are not universally separated either, unless tied specifically to managed accounts. The cryptographic guarantee applies most clearly to Calendar, ensuring compliance and protecting user privacy simultaneously.

References: Apple Platform Deployment - "User Enrollment and data separation."

NEW QUESTION # 133

In which type of ownership model can users personalize apps and data on their personal devices?

- A. Personally enabled, organization-owned
- B. Nonpersonalized, organization-owned
- C. BYOD, organization-owned
- D. **BYOD, User Enrollment**

Answer: D

Explanation:

In the Bring Your Own Device (BYOD) model with User Enrollment, users own the devices and can personalize them with their own apps and data before and after enrolling in an MDM solution. User Enrollment is designed for personal devices, offering a separation between personal and managed data while allowing user customization. BYOD, organization-owned (option B) is not a valid model, as BYOD implies user ownership. Nonpersonalized, organization-owned (option C) restricts personalization, and personally enabled, organization-owned (option D) applies to organization-owned devices, not personal ones. The Apple Platform Deployment Guide confirms that BYOD with User Enrollment supports personalization on personal devices.

NEW QUESTION # 134

Which type of enrollment do you commonly use for BYOD deployments?

- A. Device
- B. Automated device
- C. **User**

Answer: C

Explanation:

For Bring Your Own Device (BYOD) deployments, User Enrollment is the commonly used method. It allows users to enroll their personal devices in an MDM solution via a customized URL or portal, maintaining a separation between personal and managed data. Device Enrollment (option A) is typically for organization-owned devices, requiring more control than BYOD allows. Automated Device Enrollment (option C) is for organization-owned devices pre-registered with Apple, not BYOD. The Apple

Platform Deployment Guide specifies User Enrollment as the standard for BYOD.

NEW QUESTION # 135

Which apps are published through the App Store but are discoverable only with a direct link?

- A. Custom
- B. Public
- C. Unlisted
- D. In-house

Answer: C

Explanation:

Apple introduced Unlisted Apps to support distribution scenarios where organizations want apps available via the App Store but not publicly searchable. According to Apple Learning, these apps are hosted in the App Store infrastructure, but they can only be accessed through a direct link provided to users. This method is useful for apps that are intended for a limited audience (e.g., internal tools, event apps) but do not require the full privacy of Custom Apps or enterprise-only In-house Apps. Custom Apps are distributed privately through Apple Business Manager to specific organizations, while Public Apps are searchable by everyone. Unlisted is the only category that resides in the App Store yet is hidden from search, ensuring controlled but flexible distribution. References: Apple Developer Documentation - "Unlisted App Distribution."

NEW QUESTION # 136

Which action helps you reduce local network traffic when you deploy a content caching server?

- A. Use an MDM restriction to prevent content caching from being turned off for every user's managed Mac.
- B. Use an MDM restriction to prevent content caching from being turned on for every user's managed Mac.
- C. Use AssetCacheManagerUtil loadCache to preload commonly downloaded apps every night.
- D. Use assetcachelocatorutil to define your content caching server location for every user's managed device.

Answer: A

Explanation:

Content caching reduces traffic by storing content locally. The macOS Deployment Reference states, "To maximize the effectiveness of content caching, use MDM to enforce a restriction that prevents users from disabling it on managed Macs." Option A ensures caching is active. Option B has a typo ("loadCache" should be "loadCache") and isn't standard, C aids discovery but not reduction, and D increases traffic.
