AZ-104 test dumps, Microsoft AZ-104 VCE engine, AZ-104 actual exam

Our AZ-104 exam torrent is available in different versions. Whether you like to study on a computer or enjoy reading paper materials, our test prep can meet your needs. Our PDF version of the AZ-104 quiz guide is available for customers to print. You can print it out, so you can practice it repeatedly conveniently. And our AZ-104 exam torrent make it easy for you to take notes on it so that your free time can be well utilized and you can often consolidate your knowledge. Everything you do will help you successfully pass the exam and get the card. The version of APP and PC of our AZ-104 Exam Torrent is also popular. They can simulate real operation of test environment and users can test AZ-104 test prep in mock exam in limited time. They are very practical and they have online error correction and other functions. The characteristic that three versions of AZ-104 exam torrent all have is that they have no limit of the number of users, so you don't encounter failures anytime you want to learn our AZ-104 quiz guide. The three different versions can help customers solve any questions and meet their all needs.

Passing the Microsoft AZ-104 Exam demonstrates that a candidate has the necessary skills and knowledge to manage Azure

services and resources effectively. Additionally, it validates that the candidate has a solid understanding of the Azure platform, including its infrastructure, security, and management tools. With this certification, professionals can prove to their employers that they have the skills and expertise to manage Azure resources and services, which can lead to better career opportunities and higher salaries.

Microsoft Azure Administrator Sample Questions (Q365-Q370):

NEW QUESTION # 365

You have an Azure subscription named Subscription1 that has a subscription ID of c276fc76-9cd4-44c9-99a7-4fd71546436e.

You need to create a custom RBAC role named CR1 that meets the following requirements:

- * Can be assigned only to the resource groups in Subscription1
- * Prevents the management of the access permissions for the resource groups
- * Allows the viewing, creating, modifying, and deleting of resource within the resource groups

What should you specify in the assignable scopes and the permission elements of the definition of CR1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

□ Explanation:

Box 1: "/subscription/c276fc76-9cd4-44c9-99a7-4fd71546436e"

In the assignableScopes you need to mention the subscription ID where you want to implement the RBAC

Box 2: "Microsoft.Authorization/*"

Microsoft.Authorization/* is used to Manage authorization

NEW QUESTION # 366

You have an Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com that contains 100 user accounts.

You purchase 10 Azure AD Premium P2 licenses for the tenant.

You need to ensure that 10 users can use all the Azure AD Premium features.

What should you do?

- A. From the Groups blade of each user, invite the users to a group
- B. From the Directory role blade of each user, modify the directory role
- C. From the Azure AD domain, add an enterprise application
- **D. From the Licenses blade of Azure AD, assign a license**

Answer: D

Explanation:

To assign a license, under Azure Active Directory > Licenses > All Products, select one or more products, and then select Assign on the command bar.

NEW QUESTION # 367

Case Study 2 - Contoso, Ltd

Overview

Contoso, Ltd. is a manufacturing company that has offices worldwide. Contoso works with partner organizations to bring products to market.

Contoso products are manufactured by using blueprint files that the company authors and maintains.

Existing Environment

Currently, Contoso uses multiple types of servers for business operations, including the following:

- File servers
- Domain controllers
- Microsoft SQL Server servers

Your network contains an Active Directory forest named contoso.com. All servers and client computers are joined to Active Directory.

You have a public-facing application named App1. App1 is comprised of the following three tiers:

- A SQL database
- A web front end
- A processing middle tier

Each tier is comprised of five virtual machines. Users access the web front end by using HTTPS only.

Requirements

Planned Changes

Contoso plans to implement the following changes to the infrastructure:

- Move all the tiers of App1 to Azure.
- Move the existing product blueprint files to Azure Blob storage.
- Create a hybrid directory to support an upcoming Microsoft Office 365 migration project.

Technical Requirements

Contoso must meet the following technical requirements:

- Move all the virtual machines for App1 to Azure.
- Minimize the number of open ports between the App1 tiers.
- Ensure that all the virtual machines for App1 are protected by backups.
- Copy the blueprint files to Azure over the Internet.
- Ensure that the blueprint files are stored in the archive storage tier.
- Ensure that partner access to the blueprint files is secured and temporary.
- Prevent user passwords or hashes of passwords from being stored in Azure.
- Use unmanaged standard storage for the hard disks of the virtual machines.
- Ensure that when users join devices to Azure Active Directory (Azure AD), the users use a mobile phone to verify their identity.
- Minimize administrative effort whenever possible.

User Requirements

Contoso identifies the following requirements for users:

- Ensure that only users who are part of a group named Pilot can join devices to Azure AD.
- Designate a new user named Admin1 as the service administrator of the Azure subscription.
- Ensure that a new user named User3 can create network objects for the Azure subscription.

Hotspot Question

You need to configure the Device settings to meet the technical requirements and the user requirements.

Which two settings should you modify? To answer, select the appropriate settings in the answer area.

□

Answer:

Explanation:

□

Explanation:

Box 1: Selected

As per User requirements "Ensure that only users who are part of a group named Pilot can join devices to Azure AD." So, "Selected" must be selected for "User may join devices to Azure AD" Box 2: Yes As per User Requirements "Ensure that when users join devices to Azure Active Directory (Azure AD), the users use a mobile phone to verify their identity". So, "Yes" must be selected for "Require Multi-Factor Auth to join devices"..

NEW QUESTION # 368

You have the Azure virtual networks shown in the following table.

□

To which virtual networks can you establish a peering connection from VNet1?

- A. VNet3 and VNet4 only

- B. VNet2 only
- C. VNet2 and VNet3 only
- D. VNet2, VNet3, and VNet4

Answer: A

Explanation:

References:

<https://docs.microsoft.com/en-us/azure/virtual-network/tutorial-connect-virtual-networks-portal>

You can connect virtual networks to each other with virtual network peering. These virtual networks can be in the same region or different regions (also known as Global VNet peering). Once virtual networks are peered, resources in both virtual networks are able to communicate with each other, with the same latency and bandwidth as if the resources were in the same virtual network. Global VNet Peering is now generally available in all Azure public regions, excluding the China, Germany, and Azure Government regions.

The address space is the most critical configuration for a VNet in Azure. This is the IP range for the entire network that will be divided into subnets. The address space can almost be any IP range that you wish (public or private). You can add multiple address spaces to a VNet. To ensure this VNet can be connected to other networks, the address space should never overlap with any other networks in your environment. If a VNet has an address space that overlaps with another Azure VNet or on-premises network, the networks cannot be connected, as the routing of traffic will not work properly.

NEW QUESTION # 369

You have an Azure subscription named Subscription1. Subscription1 contains two Azure virtual machines named VM1 and VM2. VM1 and VM2 run Windows Server 2016.

VM1 is backed up daily by Azure Backup without using the Azure Backup agent.

VM1 is affected by ransomware that encrypts data.

You need to restore the latest backup of VM1.

To which location can you restore the backup? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

☐

Explanation:

Box 1 : VM1 and VM2 only

When recovering files, you can't restore files to a previous or future operating system version. You can restore files from a VM to the same server operating system, or to the compatible client operating system. Therefore -

"VM1 and VM2 only" is the best answer since both run on Windows Server 2016.

"A new Azure virtual machine only", this will also work but why to create unnecessary new VM in Azure if existing VM will do the task. So this option is incorrect.

Box 2 : VM1 or A new Azure virtual machine only

When restoring a VM, you can't use the replace existing VM option for encrypted VMs. This option is only supported for unencrypted managed disks. And also You can restore files from a VM to the same server operating system, or to the compatible client operating system only. Hence "VM1 or A new Azure virtual machine only" is correct answer.
