You may also use the Salesforce Sharing-and-Visibility-Architect online practice test engine to track your progress and examine your answers to determine where you need to improve on the Sharing-and-Visibility-Architect exam.

Salesforce Certified Sharing and Visibility Architect Sample Questions (Q25-Q30):

NEW QUESTION # 25

Universal Containers (UC) is looking to expand its delivery capabilities through a network of distributors that use a Partner Community license. UC employees currently can view all delivery records through the organization-wide default (OWD) setting of Public Read-Only.

Which approach should an architect recommend to limit the records a distributor can see?

- A. Create a criteria-based sharing rule to grant access to the distributor.
- **B. Set the External OWD to Private for the Delivery object.**
- C. Create an ownership-based sharing rule to grant access to the distributor.

Answer: B

Explanation:

In Salesforce, controlling access to records for external users starts with the External Organization-Wide Default (OWD) setting. Setting the Delivery object's External OWD to Private ensures that distributors can only see records explicitly shared with them.

* Option A: Ownership-based sharing rules are not applicable if the distributors do not own the records.

* Option B: Criteria-based sharing rules can grant access but rely on the External OWD being set to Private first.

* Option C (Correct): Setting the External OWD to Private is the foundation for implementing sharing logic, limiting distributors' access only to records explicitly shared with them.

:

External Organization-Wide Defaults

NEW QUESTION # 26

Dreamforce presenters need to be able to edit their presentation details (summary, presenter biographies, etc) on a private custom object in Salesforce (Presentation). All presenters for a presentation are captured on a Presenters junction object between Presenter and User.

How can this be accomplished?

- A. Give Edit rights to the Presentation record via a Permission set that is given to the Presenters for a record.
- B. Trigger on Presenter junction object that adds the user to the Sales Team for the Presentation record.
- C. Trigger on Presenter junction object that uses Apex Managed sharing to add or remove access to the related Presentation record.

Answer: C

NEW QUESTION # 27

At Universal Containers there is a team of auditors distributed through the organization that all need access to high-value Opportunities.

With a private sharing model, which two option should an architect recommend when designing a solution for this requirement?

Choose 2 answers

- A. Create a criteria-based sharing rule to give access to the public group for high-value Opportunities.
- B. Put the auditors as the highest level of the role hierarchy.
- C. Create a public group and assign the Auditors to the group.
- D. Add the auditors to the default Opportunity Team.

Answer: A,C

NEW QUESTION # 28

Universal Containers has a Private Sharing Model for the Opportunity object. Sales Rep A at Universal Containers created the Opportunity record and then transferred ownership of the Opportunity record to Sales Rep B. Both Sales Rep A and B have the same role in the Role Hierarchy.

What access will Sales Rep A have to the Opportunity after the transfer?

- A. Read Only
- B. Full Access
- C. No Access
- D. Read/Write

Answer: C

Explanation:

Explanation

When a user transfers ownership of a record to another user, the original owner loses access to the record unless they have access through other means, such as role hierarchy, sharing rules, teams, etc. In this case, since both Sales Rep A and B have the same role in the role hierarchy, and the sharing model for the Opportunity object is private, Sales Rep A will have no access to the Opportunity after the transfer

NEW QUESTION # 29

Universal Containers (UC) has created a custom Invoice object. Standard sales users at UC can see the records in search layout, but when they click to view the detail, only record name, created date, and last modified date are shown. When the system admin accesses it, he or she sees the full record detail with many more data fields.

What is the likely cause of this issue?

- A. The Sales Users profile does not have access to the remaining fields.
- B. A role-based sharing rule is missing and should be added for the sales user's role to grant access to the fields.
- C. The page layout assigned to Sales User profile has only Read-Only access to the fields.

Answer: A

Explanation:

Field-level security (FLS) defines which fields a user can view or edit. If a user can see some fields (like Name, Created Date, etc.) but not others, the issue is likely related to FLS settings on the user's profile.

* Option A: Role-based sharing rules control record access, not field access.

* Option B (Correct): The Sales User profile likely lacks FLS access for the fields in question. Adjusting the profile or permission sets to grant visibility to these fields will resolve the issue.

* Option C: Page layouts define which fields are displayed but cannot override field-level security. If the profile lacks FLS access, the fields won't appear regardless of the layout.
