Fortinet EMEA Advanced Support Exam Sample Questions (Q48-Q53):

NEW QUESTION # 48

Which of these BGP paths will be the preferred one ?

- A. Prefer the path with the lowest Multi-Exit Discriminator (MED)
- B. Prefer the path with the shortest AS Path
- C. Prefer External path (learned via EBGP) over Internal path (IBGP)
- **D. Prefer the path with the highest Local Preference value**

Answer: D

Explanation:

BGP path selection follows a specific order of attributes to determine the best path. The process prefers the path with the highest local preference first, as it is one of the earliest steps in the decision process. Local preference is used within an AS to influence outbound traffic. Only if local preferences are equal does it move to the next criteria, such as shortest AS path. The AS path length is considered after local preference, MED after that, and eBGP over iBGP even later. Therefore, among the options, the highest local preference (D) is the most preferred criterion. The original document's answer B is incorrect based on standard BGP selection rules implemented in Fortinet. Exact extract: This article describes the BGP route selection process. Scope FortiGate. Solution Consider only routes with no AS loops and a valid next hop. BGP makes routing decisions based on path, network policies and rulesets ... select the route with the lowest router ID as the best path. Network. Type. To achieve this, multiple route selection techniques can be used. Some are protocol- agnostic (for example, weight) and others are protocol-specific (for example ...).

NEW QUESTION # 49

What happens when a FortiGate detects a SYN flood attack?

- A. It enables proxy-based inspection
- **B. It applies rate limiting to SYN packets**
- C. It redirects traffic to a backup gateway
- D. It drops all incoming packets

Answer: B

Explanation:

When FortiGate detects a SYN flood attack, it applies rate limiting to SYN packets via a DoS policy, dropping excessive packets to mitigate the attack. It does not drop all packets (A), enable proxy inspection (B), or redirect traffic (D). Exact extract: "FortiGate mitigates SYN flood attacks using DoS policies, which apply rate limiting to SYN packets to prevent overwhelming the system."

NEW QUESTION # 50

In Active FTP who sends the PORT command?

- A. The FTP Server
- B. There is no PORT command in Active FTP
- **C. The FTP Client**
- D. Both

Answer: C

Explanation:

In Active FTP, the client sends the PORT command to the server, specifying an ephemeral port for the server to initiate the data connection back to the client. This distinguishes Active FTP from Passive FTP, where the server provides the port. The server does not send PORT, and the command is a key part of Active FTP. Exact extract: "In Active FTP, the client sends a PORT command to the server, specifying the IP address and port number for the data connection... The server then initiates the data connection to the

client's specified port."

NEW QUESTION # 51

Which FortiGate feature allows for dynamic routing protocol updates to be propagated through an IPsec VPN tunnel?

- A. Virtual Routing and Forwarding (VRF)
- B. Dynamic Routing Gateway
- C. Route-based VPN
- **D. Auto Discovery VPN (ADVPN)**

Answer: D

Explanation:

Auto Discovery VPN (ADVPN) in FortiGate enables dynamic routing protocols (e.g., OSPF, BGP) to propagate updates through IPsec VPN tunnels by automatically creating shortcut paths between spokes. This simplifies configuration and enhances scalability in hub-and-spoke topologies. Route-based VPN (D) supports routing but not dynamic discovery, VRF (C) is for segmentation, and Dynamic Routing Gateway (B) is not a standard Fortinet feature. Exact extract: "ADVPN allows dynamic routing protocols to be used over IPsec VPN tunnels, enabling spokes to discover and communicate directly via shortcuts, improving efficiency in hub-and-spoke setups."

NEW QUESTION # 52

How many layers does the OSI Model contain?

- **A. 0**
- B. 1
- C. 2
- D. 3

Answer: A

Explanation:

The OSI (Open Systems Interconnection) model consists of seven layers: Physical, Data Link, Network, Transport, Session, Presentation, and Application. This framework is used in Fortinet documentation to explain protocol operations. Options A, C, and D are incorrect as they do not match the standard OSI model.

Exact extract: "The OSI model defines seven layers for network communication: 1. Physical, 2. Data Link, 3. Network, 4. Transport, 5. Session, 6. Presentation, 7. Application."
