APICS Certified Supply Chain Professional Sample Questions (Q407-Q412):

NEW QUESTION # 407
What is the inventory turnover for a company with the following financial data?

- A. 4.64
- B. 8.03
- C. 1.91
- D. 19.50

Answer: B

NEW QUESTION # 408
Continuous improvement is best described as:

- A. a never-ending effort to expose and eliminate root causes of problems.
- B. a process in which a supplier commits to replenishing inventory based on demand without receiving replenishment orders.
- C. identifying and implementing big-step improvements within a process.
- D. a never-ending effort by the management team to reduce cycle time.

Answer: A

Explanation:
Continuous improvement, often referred to as Kaizen, focuses on making small, incremental changes to processes with the goal of improving efficiency and quality. Here's a breakdown of why option A is correct:
* Never-ending effort to expose and eliminate root causes of problems: Continuous improvement is an ongoing process that seeks to identify and address the fundamental causes of inefficiencies and issues.
* Management effort to reduce cycle time: While reducing cycle time is a component of continuous improvement, the primary focus is on identifying root causes.
* Big-step improvements: Continuous improvement typically involves small, incremental changes rather than large, radical changes.
* Supplier replenishment: This describes a vendor-managed inventory system, not the essence of continuous improvement. Thus, the best description of continuous improvement is a never-ending effort to expose and eliminate root causes of problems.

NEW QUESTION # 409
Which of the following reasons for viewing supply chains as a set of systematic processes istypically considered to be the most important?

- A. a well-defined and communicated process provides everybody with a standardizedworkflow and eliminates the need to reinvent procedures every time the company develops aproducts, fulfills an order, or evaluates a supplier
- B. having a systematic process makes it easier to incorporate best practices and knowledge
- C. with formal and defined processes, a company can document and measure them, whichfacilitates supply chain improvements
- D. viewing the supply chain in terms of a globally aligned set of processes makes it possible toimplement consistency across geographic units
- E. processes usually move across functional boundaries

Answer: C

NEW QUESTION # 410
Medium-term demand management projections are used primarily to:

- A. complete strategic business planning of facilities.
- B. aggregate demand for production planning.
- C. develop the master production schedule.
- D. complete forecasts at the item level.

Answer: B

Explanation:
Medium-term demand management projections typically cover a horizon of several months to a few years and are essential for production planning. Here's the detailed explanation:
* Aggregate Demand: Medium-term projections aggregate demand at a higher level, such as product families or groups, to facilitate production planning and capacity management.
* Production Planning: These projections are used to plan production schedules, workforce requirements, and resource allocation, ensuring that manufacturing operations can meet anticipated demand.
* Inventory Management: Helps in maintaining optimal inventory levels by balancing supply and demand over the medium term.
* Alignment with Business Goals: Ensures that production plans are aligned with the company's strategic goals and market demands.
While medium-term projections also support other activities, such as developing the master production schedule (MPS), their primary use is in aggregating demand for effective production planning.
