Exam CrowdStrike IDP Blueprint | Latest IDP Dumps

In order to let you have a deep understanding of our IDP learning guide, our company designed the free demos for our customers. We will provide you with free demos of our study materials before you buy our products. If you want to know our IDP training materials, you can download them from the web page of our company. If you use the free demos of our IDP study engine, you will find that our products are very useful for you to pass your IDP exam and get the certification.

The IDP vce braindumps of our Dumpexams contain questions and correct answers and detailed answer explanations and analysis, which apply to any level of candidates. Our IT experts has studied CrowdStrike real exam for long time and created professional study guide. So you will pass the test with high rate If you practice the IDP Dumps latest seriously and skillfully.

Latest IDP Dumps | Latest IDP Exam Objectives

Are you ready to gain all these CrowdStrike IDP certification benefits? Looking for a simple, smart, and quick way to pass the challenging CrowdStrike Certified Identity Specialist(CCIS) Exam exam? If your answer is yes then you need to enroll in the IDP exam and prepare well to crack this IDP Exam with good scores. In this career advancement journey, you can get help from Dumpexams. The Dumpexams will provide you with real, updated, and error-free IDP Exam Dumps that will enable you to pass the final CrowdStrike Certified Identity Specialist(CCIS) Exam exam easily.

CrowdStrike Certified Identity Specialist(CCIS) Exam Sample Questions (Q56-Q61):

NEW QUESTION # 56
How does Identity Protection extend the capabilities of existing multi-factor authentication (MFA)?

- A. Implementation of a second-layer security control using policy rules as it detects risky or abnormal behaviors
- B. Identity Protection will replace third-party MFA and trigger as it detects risky or abnormal behaviors
- C. Identity Protection is not going to detect risky user behavior
- D. Identity Protection does not support on-premises MFA connectors

Answer: A

Explanation:
Falcon Identity Protection is designed to extend-not replace-existing MFA solutions. According to the CCIS curriculum, Identity Protection enhances MFA by adding a risk-driven, policy-based enforcement layer that dynamically triggers MFA challenges when risky or abnormal identity behavior is detected.
Rather than applying MFA uniformly, Falcon evaluates authentication context such as behavioral deviation, privilege usage, and anomaly detection. When risk thresholds are exceeded, Policy Rules can enforce MFA through integrated connectors, providing adaptive, Zero Trust-aligned authentication.
The incorrect options misunderstand Falcon's role. Identity Protection does detect risky behavior, does not replace MFA providers, and fully supports both cloud and on-premises MFA connectors.
Because Falcon adds intelligence-driven enforcement on top of MFA, Option A is the correct and verified answer.

NEW QUESTION # 57

By using compromised credentials, threat actors are able to bypass theExecutionphase of the MITRE ATT&CK framework and move directly into:

- A. Discovery
- B. Initial Access
- C. Lateral Movement
- D. Weaponization

Answer: A

Explanation:
The CCIS curriculum highlights a critical identity-security concept: when attackers usecompromised credentials, they often bypass traditional malware-based attack phases, including theExecutionphase of the MITRE ATT&CK framework. Because no malicious code needs to be executed, attackers can immediately begin interacting with the environment as a legitimate user.
As a result, threat actors move directly into theDiscoveryphase. During Discovery, attackers enumerate users, groups, privileges, systems, domain relationships, and trust paths to understand the environment and plan further actions. This behavior is commonly observed in identity-based attacks and living-off-the-land techniques.
Falcon Identity Protection is specifically designed to detect this behavior by monitoring authentication traffic, privilege usage, and anomalous identity activity-areas where traditional EDR tools may have limited visibility.
The other options are incorrect:
* Initial Access has already occurred via credential compromise.
* Weaponization and Execution are not required.
* Lateral Movement typically follows Discovery.
Because compromised credentials allow attackers to jump straight intoDiscovery,Option Cis the correct and verified answer.

NEW QUESTION # 58
Where would a Falcon administrator enable authentication traffic inspection (ATI) for Domain Controllers?

- A. Identity configuration policies
- B. Identity protection settings
- C. Identity management settings
- D. Identity detection configuration

Answer: A

Explanation:
Authentication Traffic Inspection (ATI) is a foundational capability of Falcon Identity Protection that enables the platform to analyze authentication traffic from domain controllers. According to the CCIS documentation, ATI is enabled throughIdentity configuration policies.
Identity configuration policies define how the Falcon sensor captures and inspects authentication-related traffic, including Kerberos, NTLM, LDAP, and other identity protocols. Enabling ATI at this level ensures that domain controllers provide the necessary telemetry for identity risk analysis, detections, and behavioral profiling.
The other options are incorrect because:
* Identity management settings focus on identity governance and administration.
* Identity detection configuration controls detection logic, not traffic inspection.
* Identity protection settings manage high-level configuration but do not directly enable ATI.
Because ATI must be explicitly enabled viaIdentity configuration policies,Option Ais the correct and verified answer.

NEW QUESTION # 59
How does CrowdStrike Falcon Identity Protection help customers identify different types of accounts in their domain?

- A. Analyzes authentication traffic and automatically classifies programmatic and human accounts
- B. Conducts regular vulnerability assessments on programmatic accounts
- C. Implements advanced encryption algorithms for account metadata
- D. Assigns a human authorizer to each programmatic account for approval

Answer: A

Explanation:

Falcon Identity Protection automatically differentiateshuman and programmatic accountsby analyzing authentication traffic patterns. According to the CCIS curriculum, the platform uses behavioral analytics to observe how accounts authenticate, including frequency, protocol usage, timing, and access patterns.

Human users typically authenticate interactively and exhibit variable behavior, while programmatic or service accounts authenticate predictably and non-interactively. Falcon leverages these differences to automatically classify account types without requiring manual tagging or administrative input.

This classification is critical for accurate risk scoring, privilege analysis, and detection logic. Programmatic accounts often carry elevated privileges and long-lived credentials, making them attractive targets for attackers. Automatically identifying them allows Falcon to apply appropriate risk models and detections.

Because Falcon usesauthentication traffic analysisto classify account types,Option Cis the correct and verified answer.

NEW QUESTION # 60

Which of the following best describes how Policy Group and Policy Rule precedence works?

- A. Policy Groups are evaluated in the order in which the groups appear on the page; however, Policy Rules within those groups have no precedence
- B. Policy Groups are evaluated in the order in which the groups appear on the page. The Policy Rules within those groups are evaluated in the order in which they appear in the group
- C. There is no precedence with Policy Groups or Policy Rules; they enact policy if the conditions match
- D. Policy Groups only group Policy Rules together. Precedence is dictated by the Rules

Answer: B

Explanation:

Falcon Identity Protection enforces deterministic policy execution using a clear and predictable precedence model. As outlined in the CCIS curriculum, Policy Groups are evaluated top to bottom, based on their order in the console. Within each Policy Group, Policy Rules are evaluated sequentially, also from top to bottom.

This ordered evaluation ensures consistent enforcement behavior and allows administrators to design layered identity controls. When a rule's conditions are met and an action is executed, subsequent rules may or may not be evaluated depending on rule logic and configuration. This model gives administrators precise control over enforcement priority.

The incorrect options misunderstand how precedence works. Policy enforcement is not unordered, nor are Policy Groups merely visual containers. Both grouping and rule order matter.

This precedence model is critical for avoiding conflicting enforcement actions and aligns with Zero Trust principles by ensuring predictable, auditable identity enforcement. Therefore, Option A is the correct answer.

NEW QUESTION # 61
