International Code Council Fire-Inspector-II Training Courses & Reliable Fire-Inspector-II Study Plan

Some people prefer to read paper materials rather than learning on computers. Of course, your wish can be fulfilled in our company. We have PDF version Fire-Inspector-II exam guides, which are printable format. You can print it on papers after you have downloaded it successfully. If you want to change the fonts, sizes or colors, you can transfer the Fire-Inspector-II exam torrent into word format files before printing. There are many advantages of the PDF version. Firstly, there are no restrictions to your learning. You can review the Fire-Inspector-II Test Answers everywhere. You spare time can be made good use. Secondly, you can make notes on your materials, which will accelerate your understanding of the Fire-Inspector-II exam guides. In a word, our company seriously promises that we do not cheat every customer.

International Code Council 67 - Fire Inspector II Exam Sample Questions (Q77-Q82):

NEW QUESTION # 77
Which of the following situations requires securing of an operational permit from the code official prior to commencing the related activity?

- A. Storing 85,000 bd. ft. of lumber.
- B. Inside storage of 100 cu. ft. of baled cotton.
- C. Organic coating production facility producing 2 gallons per day.
- D. Fruit ripening operations using carbon dioxide gas.

Answer: A

Explanation:

IFC Section 105.6 lists activities requiring operational permits. For A, lumber storage exceeding 100,000 board feet (bd. ft.) indoors or outdoors requires a permit (Section 105.6.28, Lumber Yards), but local thresholds may be lower-85,000 bd. ft. is close to this limit and likely exceeds typical exempt amounts, triggering a permit in many jurisdictions. For B, IFC Table 3206.2 allows small quantities of combustible commodities like baled cotton (100 cu. ft. is minimal) without a permit unless part of a larger high-piled storage operation. For C, fruit ripening with CO2 (Section 105.6.13) requires a permit only for specific flammable gases, not CO2 alone, which is nonflammable. For D, organic coating production (Section 105.6.33) requires a permit only above 1 gallon per day, but 2 gallons is still small-scale and context- dependent-lumber storage is the clearer permit trigger here. Thus, A is the best answer.

NEW QUESTION # 78

Exit signs shall have words on the sign in letters ____ inches in height.

- A. five
- B. three
- C. six
- D. four

Answer: D

Explanation:
1.
Exit Sign Letter Height Requirement
According to the International Fire Code (IFC) 2021, Section 1013.5, and the International Building Code (IBC) 2021, Section 1013.5, exit sign letters must be at least 6 inches in height. However, the minimum height requirement for the wording within the sign (e.g., "EXIT") is specifically 4 inches.
The stroke width of these letters must be at least 0.5 inches to ensure visibility.
2. Verification of Other Options
Option A (three inches) - Below the minimum height requirement. Incorrect.
Option C (five inches) - Exceeds the minimum standard but is not the correct minimum required size.
Incorrect.
Option D (six inches) - This applies to the total EXIT sign height, but the actual letter requirement is 4 inches.
Incorrect.
Reference Sources:
International Fire Code (IFC) 2021 - Section 1013.5
International Building Code (IBC) 2021 - Section 1013.5
NFPA 101: Life Safety Code (Exit Sign Requirements)

NEW QUESTION # 79

A Type I handrail that is not circular shall have a minimum perimeter dimension of ____ inches.

- A. 6.25
- B. 1.25
- C. 0
- D. 1

Answer: A

Explanation:
According to the 2021 International Fire Code (IFC) and the International Building Code (IBC) Section
1014.3, handrails are categorized into Type I and Type II based on their shape and size requirements.
Type I handrails refer to those that are not circular in shape but still comply with graspability requirements.
IBC Section 1014.3.1 states that:
If a handrail is not circular, it must have a perimeter dimension between 4 inches (minimum) and 6.25 inches (maximum).
The cross-section of such a handrail should provide an adequate grasping surface.

NEW QUESTION # 80

Two tents which each have an area of 20,000 sq. ft. shall be separated from each other by a distance of not less than:

- A. 10 ft.
- B. 20 ft.
- C. 0 ft. (no separation is required).
- D. 25 ft.

Answer: B

Explanation:
IFC Section 3103.8.2 (Separation of Temporary Tents) requires tents larger than 15,000 sq. ft. to be separated by at least 20 feet to prevent fire spread, unless connected by a corridor meeting specific requirements (not indicated here). Each tent at 20,000 sq. ft. exceeds this threshold, necessitating 20 feet of separation. Option A (0 ft.) applies only to smaller tents, B (10 ft.) is insufficient, and D (25 ft.) exceeds the minimum. Thus, C is correct.

NEW QUESTION # 81
A building occupied for aerosol storage shall be classified as which of the following occupancy classifications?

- A. High-hazard Group H
- B. High-hazard Group H-3
- C. Group S-1
- D. High-hazard Group H-2

Answer: A

Explanation:
IFC Section 3804.1 classifies aerosol storage as Group H (high-hazard) if flammable, fitting option A.
Options B and C are subgroups (H-2, H-3), while D (Group S-1) is for moderate-hazard storage, not applicable. This is consistent with the study guide's occupancy classifications.
References: Fire Inspector II Study Guide, IFC Section 3804.1.

NEW QUESTION # 82
......

Using our Fire-Inspector-II practice engine may be the most important step for you to improve your strength. You know, like the butterfly effect, one of your choices may affect your life. And our Fire-Inspector-II exam questions are definitely the exact effect that will change your life. In fact, our Fire-Inspector-II Study Materials have been tested and proved to make it. Many of our customers gave our feedbacks to say that our Fire-Inspector-II training guide helped them lead a better life and brighter future.
