Exam Vce CT-UT Free & Reliable CT-UT Exam Answers

Because our CT-UT actual exam help exam cannonades pass the exam with rate up to 98 to 100 percent. It encourages us to focus more on the quality and usefulness of our CT-UT exam questions in the future. And at the same time, we offer free demos before you really choose our three versions of CT-UT Practice Guide. Time is flying, hope you can begin your review on our CT-UT study engine as quickly as possible.

ISTQB Certified Tester Usability Tester Sample Questions (Q32-Q37):

NEW QUESTION # 32

Which of the following are advantages of using a usability lab?

- The context is natural
 - Test sessions are easy to observe
 - Inexpensive setup
 - Similar conditions for all sessions
 - Easy recording of sessions
- A. iii, iv & v are true, i & ii are false
 - **B. ii, iv & v are true, i & iii are false**
 - C. i, ii & v are true, iii & iv are false
 - D. ii & iv are true, i, iii & v are false

Answer: B

Explanation:

Usability labs provide a controlled environment that offers several advantages for observing and recording usability test sessions. Specifically, they allow for easy observation of participants (ii), standardized conditions for each session (iv), and facilitate audio and

video recording for detailed analysis (v). However, the context is not natural (i), because the lab is an artificial setting rather than the user's actual environment.

Also, setting up a professional usability lab is not inexpensive (iii); it typically involves significant costs for equipment, space, and staffing. Therefore, options ii, iv, and v are true, while i and iii are false.

#####

NEW QUESTION # 33

Which of the following is the highest WCAG conformance level, promising the most accessible content?

- A. Triple A (AAA)
- B. Double A (AA)
- C. Quadruple A (AAAA)
- D. Single A (A)

Answer: A

Explanation:

The Web Content Accessibility Guidelines (WCAG) define three levels of conformance for web content accessibility:

Level A (Single A) is the minimum level of compliance.

Level AA (Double A) is the standard recommended for most websites, balancing accessibility and design.

Level AAA (Triple A) is the highest and most comprehensive level of accessibility, covering the widest range of needs.

There is no such level as "Quadruple A (AAAA)," making option D invalid.

Thus, WCAG Triple A (AAA) promises the most accessible content, even though it may not always be practically achievable for all types of content.

#####

NEW QUESTION # 34

You are asked to evaluate the usability of a software application for a law firm. Due to time and budget constraints, it is not possible to include users in the evaluation process.

Which of the following is a valid approach for evaluating the usability in this case?

- A. Accessibility Evaluation
- B. Usability testing
- C. Usability Review
- D. User surveys

Answer: C

Explanation:

When actual users cannot be included, a usability review (often an expert or heuristic evaluation) is the most practical method.

Trained evaluators examine the interface against usability principles and standards to identify potential issues. Surveys require user input, and usability testing cannot proceed without users.

Accessibility evaluation targets inclusivity for users with impairments, which is related but not a substitute for overall usability evaluation. Therefore, option A is the only valid method under these constraints.

NEW QUESTION # 35

You're asked to evaluate the direct interaction between ordinary users and the software product. Which kinds of evaluations would be suited for that?

- A. Risk assessment
- B. Accessibility evaluation
- **C. Usability evaluation**
- D. Usability maturity assessment

Answer: C

Explanation:

A usability evaluation is specifically designed to assess how real users interact with a software product. It focuses on effectiveness, efficiency, and user satisfaction in completing tasks. This may involve usability testing, expert reviews, or heuristic evaluations. The goal is to identify any usability problems and understand user behavior during real use.

Option A (Accessibility evaluation) targets inclusivity for users with disabilities, not general user interaction.

Option B (Usability maturity assessment) evaluates the organization's usability practices, and Option C (Risk assessment) evaluates potential project or system risks. Only option D directly involves observing and measuring user interaction.

#####

NEW QUESTION # 36

Your project manager asked you for your advice. A recent project failed because the users were not satisfied with the final product, although your project manager claimed that she followed the human-centered design process. She interviewed users at the start of the project, created a first prototype and evaluated that prototype.

Which part of the human-centered design process did she miss?

- **A. The "iterate"-part**
- B. The "design"-part
- C. The "evaluate"-part
- D. The "analyze"-part

Answer: A

Explanation:

The human-centered design process emphasizes iterative development-testing and refining designs through multiple cycles. In the scenario, the project manager interviewed users and evaluated a prototype but did not iterate based on feedback. Skipping iteration likely resulted in unmet user needs. Human-centered design, per ISO 9241-210, includes: understanding context of use, specifying requirements, producing design solutions, and evaluating-repeated iteratively. Hence, option D ("iterate") is correct.
