

ARA-C01 Latest Real Test - Reliable ARA-C01 Test Questions

BONUS!!! Download part of Easy4Engine ARA-C01 dumps for free: <https://drive.google.com/open?id=1cUsRNmOfLDDEdwUuzhdeyRgt0QX0a47m>

Over the past few years, we have gathered hundreds of industry experts, defeated countless difficulties, and finally formed a complete learning product - ARA-C01 test answers, which are tailor-made for students who want to obtain ARA-C01 certificates. Our customer service is available 24 hours a day. You can contact us by email or online at any time. In addition, all customer information for purchasing ARA-C01 Test Torrent will be kept strictly confidential. We will not disclose your privacy to any third party, nor will it be used for profit. Then, we will introduce our products in detail.

IT certification candidates are mostly working people. Therefore, most of the candidates did not have so much time to prepare for the exam. But they need a lot of time to participate in the certification exam training courses. This will not only lead to a waste of training costs, more importantly, the candidates wasted valuable time. Here, I recommend a good learning materials website. Some of the test data on the site is free, but more importantly is that it provides a realistic simulation exercises that can help you to pass the Snowflake ARA-C01 Exam. Easy4Engine Snowflake ARA-C01 exam materials can not only help you save a lot of time, but also allows you to pass the exam successfully. So you have no reason not to choose it.

Pass Guaranteed Quiz 2026 High Pass-Rate Snowflake ARA-C01 Latest Real

Test

The pass rate is 98.65%, and we pass guarantee and money back guarantee if you fail to pass the exam by using ARA-C01 learning materials of us. We have a broad market in the world with the high quality of ARA-C01 exam dumps, and if you choose us we will help you pass the exam just one time. In addition ARA-C01 Training Materials of us also have free update for one year after purchasing. We also have the professional service stuff to answer all questions of you. If you have a try, you will never regret.

Snowflake SnowPro Advanced Architect Certification Sample Questions (Q139-Q144):

NEW QUESTION # 139

Every Snowflake table loaded by the Kafka connector has a schema consisting of two VARIANT columns. Which are those?

- A. RECORD_METADATA
- B. RECORD_CONTENT
- C. RECORD_MESSAGE

Answer: A,B

NEW QUESTION # 140

An Architect has designed a data pipeline that is receiving small CSV files from multiple sources. All of the files are landing in one location. Specific files are filtered for loading into Snowflake tables using the copy command. The loading performance is poor. What changes can be made to improve the data loading performance?

- A. Increase the size of the virtual warehouse.
- B. Change the file format from CSV to JSON.
- C. Create a multi-cluster warehouse and merge smaller files to create bigger files.
- D. Create a specific storage landing bucket to avoid file scanning.

Answer: C

Explanation:

According to the Snowflake documentation, the data loading performance can be improved by following some best practices and guidelines for preparing and staging the data files. One of the recommendations is to aim for data files that are roughly 100-250 MB (or larger) in size compressed, as this will optimize the number of parallel operations for a load. Smaller files should be aggregated and larger files should be split to achieve this size range. Another recommendation is to use a multi-cluster warehouse for loading, as this will allow for scaling up or out the compute resources depending on the load demand. A single-cluster warehouse may not be able to handle the load concurrency and throughput efficiently. Therefore, by creating a multi-cluster warehouse and merging smaller files to create bigger files, the data loading performance can be improved. Reference:

Planning a Data Load

NEW QUESTION # 141

Select the true statement

- A. Privileges are granted to users. Users are granted to roles
- B. Privileges are granted to both roles and users
- C. Privileges are granted to roles. Roles are granted to users

Answer: C

NEW QUESTION # 142

Role A has the following permissions:

. USAGE on db1

. USAGE and CREATE VIEW on schema1 in db1

. SELECT on table1 in schema1

Role B has the following permissions:

. USAGE on db2

. USAGE and CREATE VIEW on schema2 in db2

. SELECT on table2 in schema2

A user has Role A set as the primary role and Role B as a secondary role.

What command will fail for this user?

- A. use database db2;use schema schema2;create view v2 as select * from db1.schema1. table1;
- B. use database db1;use schema schema1;select * from db2.schema2.table2;
- C. use database db2;use schema schema2;select * from db1.schema1.table1 union select * from table2;
- D. use database db1;use schema schema1;create view v1 as select * from db2.schema2.table2;

Answer: A

Explanation:

This command will fail because while the user has USAGE permission on db2 and schema2 through Role B, and can create a view in schema2, they do not have SELECT permission on db1.schema1.table1 with Role B.

Since Role A, which has SELECT permission on db1.schema1.table1, is not the currently active role when the view v2 is being created in db2.schema2, the user does not have the necessary permissions to read from db1.

schema1.table1 to create the view. Snowflake's security model requires that the active role have all necessary permissions to execute the command.

NEW QUESTION # 143

Which system functions does Snowflake provide to monitor clustering information within a table (Choose two.)

- A. SYSTEM\$CLUSTERING_USAGE
- B. SYSTEM\$CLUSTERING_DEPTH
- C. SYSTEM\$CLUSTERING_INFORMATION
- D. SYSTEM\$CLUSTERING_PERCENT
- E. SYSTEM\$CLUSTERING_KEYS

Answer: B,C

Explanation:

According to the Snowflake documentation, these two system functions are provided by Snowflake to monitor clustering information within a table. A system function is a type of function that allows executing actions or returning information about the system. A clustering key is a feature that allows organizing data across micro-partitions based on one or more columns in the table. Clustering can improve query performance by reducing the number of files to scan.

* SYSTEM\$CLUSTERING_INFORMATION is a system function that returns clustering information, including average clustering depth, for a table based on one or more columns in the table. The function takes a table name and an optional column name or expression as arguments, and returns a JSON string

* with the clustering information. The clustering information includes the cluster by keys, the total partition count, the total constant partition count, the average overlaps, and the average depth1.

* SYSTEM\$CLUSTERING_DEPTH is a system function that returns the clustering depth for a table based on one or more columns in the table. The function takes a table name and an optional column name or expression as arguments, and returns an integer value with the clustering depth. The clustering depth is the maximum number of overlapping micro-partitions for any micro-partition in the table. A lower clustering depth indicates a better clustering2.
