## Google Certified Professional - Cloud Developer Sample Questions (Q258-Q263):

### NEW QUESTION # 258

You are running a containerized application on Google Kubernetes Engine. Your container images are stored in Container Registry. Your team uses CI/CD practices. You need to prevent the deployment of containers with known critical vulnerabilities. What should you do?

- A. \* Use Web Security Scanner to automatically crawl your application
  - \* Review your application logs for scan results, and provide an attestation that the container is free of known critical vulnerabilities
  - \* Use Binary Authorization to implement a policy that forces the attestation to be provided before the container is deployed
- B. \* Enable the Container Scanning API to perform vulnerability scanning
  - \* Programmatically review vulnerability reporting through the Container Scanning API, and provide an attestation that the container is free of known critical vulnerabilities
  - \* Use Binary Authorization to implement a policy that forces the attestation to be provided before the container is deployed
- C. \* Use Web Security Scanner to automatically crawl your application
  - \* Review the scan results in the scan details page in the Cloud Console, and provide an attestation that the container is free of known critical vulnerabilities
  - \* Use Binary Authorization to implement a policy that forces the attestation to be provided before the container is deployed
- D. \* Enable the Container Scanning API to perform vulnerability scanning
  - \* Review vulnerability reporting in Container Registry in the Cloud Console, and provide an attestation that the container is free of known critical vulnerabilities
  - \* Use Binary Authorization to implement a policy that forces the attestation to be provided before the container is deployed

**Answer: B**

Explanation:

### NEW QUESTION # 259

You are developing a single-player mobile game backend that has unpredictable traffic patterns as users interact with the game throughout the day and night. You want to optimize costs by ensuring that you have enough resources to handle requests, but minimize over-provisioning.

You also want the system to handle traffic spikes efficiently. Which compute platform should you use?

- A. Google Kubernetes Engine using cluster autoscaling
- B. Compute Engine with managed instance groups
- C. Cloud Run
- D. Compute Engine with unmanaged instance groups

**Answer: C**

Explanation:

Compute Engine answers are eliminated because they can't scale quickly enough.

GKE Answer is ruled out because you can end up overprovisioned, also cannot scale out to add more nodes quickly enough.

### NEW QUESTION # 260

You are working on a social media application. You plan to add a feature that allows users to upload images. These images will be 2

MB ?1 GB in size. You want to minimize their infrastructure operations overhead for this feature. What should you do?

- A. Create a separate bucket for each user in Cloud Storage.  
Assign a separate service account to allow write access on each bucket.  
Transfer service account credentials to the client application based on user information.  
The application uses this service account to upload images to Cloud Storage.
- B. Change the application to create signed URLs for Cloud Storage.  
Transfer these signed URLs to the client application to upload images to Cloud Storage.
- C. Change the application to accept images directly and store them in the database that stores other user information.
- D. Set up a web server on GCP to accept user images and create a file store to keep uploaded files.  
Change the application to retrieve images from the file store.

**Answer: B**

Explanation:

<https://cloud.google.com/blog/products/storage-data-transfer/uploading-images-directly-to-cloud-storage-by-using-signed-url>

### NEW QUESTION # 261

You have an application running in App Engine. Your application is instrumented with Stackdriver Trace. The /product-details request reports details about four known unique products at /sku-details as shown below. You want to reduce the time it takes for the request to complete. What should you do?

Timeline

- A. Change /product-details to perform the requests in parallel.
- B. Store the /sku-details information in a database, and replace the webservice call with a database query.
- C. Change the Persistent Disk type to SSD.
- D. Increase the size of the instance class.

**Answer: A**

### NEW QUESTION # 262

You have an application running in App Engine. Your application is instrumented with Stackdriver Trace. The /product-details request reports details about four known unique products at /sku-details as shown below. You want to reduce the time it takes for the request to complete. What should you do?

- A. Change /product-details to perform the requests in parallel.

- B. Store the /sku-details information in a database, and replace the webservice call with a database query.
- C. Change the Persistent Disk type to SSD.
- D. Increase the size of the instance class.

**Answer: A**
