## CheckPoint 156-836 Study Guide Pdf, Valid 156-836 Guide Files

Pass4guide CheckPoint 156-836 exam preparation material is designed to help you pass the CheckPoint 156-836 exam on your first attempt. The formats mentioned above can be used right away after buying the product. So what are waiting for, get our Check Point Certified Maestro Expert - R81 (CCME) (156-836) study material today and start your constructive progress towards your goals. The rest is assured by us when you give it your all.

The Check Point Certified Maestro Expert - R81 (CCME) certification is highly valued in the industry and is recognized by organizations worldwide. Check Point Certified Maestro Expert - R81 (CCME) certification enables professionals to demonstrate their expertise in managing and administering Maestro solutions, which can lead to better job opportunities and higher salaries. Overall, this certification is an excellent way for professionals to enhance their skills and advance their careers in the field of network

security.

CheckPoint 156-836 (Check Point Certified Maestro Expert - R81 (CCME)) Certification Exam is a highly specialized certification that validates the skills and expertise of IT professionals in managing complex network infrastructures using Check Point Maestro. Check Point Certified Maestro Expert - R81 (CCME) certification is recognized globally and is highly valued by organizations that rely on Check Point solutions for their security needs. To prepare for the exam, candidates are required to have a solid understanding of networking and security principles, as well as experience in managing complex network infrastructures. They are also recommended to undergo training in Check Point Maestro and to familiarize themselves with the latest features and functionalities of the solution.

## CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q89-Q94):

### NEW QUESTION # 89

What can be learned from the output of `sx_api_ports_dump.py` command?

- A. Orchestrator port status
- B. Information about Security Groups
- C. Information about backplane bonds
- D. Information about downlink ports only

**Answer: C**

Explanation:

References

\*R81.20 Maestro Cheat Sheet version 7 - Check Point CheckMates, page 2

\*[Maestro Expert (CCME) Course - Check Point Software], page 31

\*[Check Point Certified Maestro Expert (CCME) R81.X - Global Knowledge], page 3

### NEW QUESTION # 90

Where should `sx_api_ports_dump.py` command be ran?

- A. Management server
- B. Security Group
- C. Orchestrator
- D. SMO Appliance

**Answer: C**

Explanation:

Explanation

The `sx_api_ports_dump.py` command should be run on the Orchestrator, which is the device that manages the communication and the configuration of the Security Groups and the SGMs. The command shows the port mapping and the traffic distribution for each Security Group, as well as the backplane bonds and the Orchestrator ports. The command does not work on the Management server, the Security Group, or the SMO Appliance, as they do not have the same role and functionality as the Orchestrator.

### NEW QUESTION # 91

What cannot be a reason for "Failed to get remote orchestrator interfaces" error message, when clicking on "Orchestrator" in WebUI

- A. Remote orchestrator has no empty interfaces
- B. No Sync between orchestrators
- C. Single orchestrator environment, but configured Orchestrator amount is 2
- D. One orchestrator only, but Orchestrator amount is 2 or no Sync in between orchestrators

**Answer: A**

Explanation:

One of the possible reasons for the "Failed to get remote orchestrator interfaces" error message, when clicking on "Orchestrator" in WebUI, is that the remote orchestrator has no empty interfaces that can be assigned to a security group. This can happen if all the interfaces on the remote orchestrator are already part of configured security groups, or if the remote orchestrator has no physical interfaces at all. In this case, the WebUI cannot display the unassigned interfaces of the remote orchestrator, and shows the error message.

## NEW QUESTION # 92

What kinds of transceivers are supported on Orchestrator MHO-140?

- A. SFP+, SFP28, QSFP
- **B. SFP, SFP+, QSFP, QSFP28**
- C. SFP, SFP+, SFP28
- D. SFP, QSFP, QSFP28

**Answer: B**

Explanation:

The Maestro Hyperscale Orchestrator MHO-140 supports a variety of transceivers to provide high-speed and high-density connectivity. Specifically, it supports SFP, SFP+, QSFP, and QSFP28 transceivers, which cater to different port speeds and connectivity requirements in the Maestro environment.

Exact Extract:

"The Orchestrator MHO-140 supports SFP, SFP+, QSFP, and QSFP28 transceivers on its ports. SFP stands for Small Form-factor Pluggable, SFP+ supports up to 10 Gbps, QSFP (Quad Small Form-factor Pluggable) supports up to 40 Gbps, and QSFP28 supports up to 100 Gbps per port."

-Check Point Certified Maestro Expert (CCME) R81.X Courseware, Module 1: Introduction to Check Point Maestro, Lesson 1.2: Maestro Licensing and Hardware, page 1-8

-Check Point R81 Maestro Administration Guide, Chapter 1: Introduction to Check Point Maestro, Section: Maestro Licensing, page 1-6

-Check Point Quantum Maestro Orchestrator Datasheet, page 3

Explanation of Options:

\* A. SFP, QSFP, QSFP28: Incorrect, as it omits SFP+, which is supported by the MHO-140.

\* B. SFP+, SFP28, QSFP: Incorrect, as SFP28 is not explicitly listed as supported on the MHO-140, and SFP is missing.

\* C. SFP, SFP+, SFP28: Incorrect, as SFP28 is not supported, and QSFP and QSFP28 are omitted.

\* D. SFP, SFP+, QSFP, QSFP28: Correct, as this option includes all transceivers supported by the MHO-140, as per the official documentation.

## NEW QUESTION # 93

How many orchestrators may Dual-Site include?

- A. Only 4
- B. 0
- **C. 2 or 4**
- D. 1

**Answer: C**

Explanation:

Explanation

A Dual Site environment can include either two or four orchestrators, depending on the scenario. There are three primary scenarios for Dual Site configuration:

\*Direct connectivity between remote site orchestrators: This scenario requires two orchestrators, one for each site, and a direct connection between them using the site-sync port.

\*Two orchestrators on the same site are connected to the remote site orchestrators through two different switches: This scenario requires four orchestrators, two for each site, and a connection between them using the site-sync port and two external switches that support QinQ and MTU increment.

\*Two orchestrators on the same site are connected to the remote site orchestrators through one switch: This scenario also requires four orchestrators, two for each site, and a connection between them using the site-sync port and one external switch that supports QinQ and MTU increment.
