What is more, our experts never stop researching the questions of the real C_SIGVT_2506 exam. So our C_SIGVT_2506 exam questions are always the latest for you to download.

SAP Certified Associate - Validating Business Transformation Sample Questions (Q29-Q34):

NEW QUESTION # 29

What is one of the primary goals of the RISE with SAP Methodology?

- A. Eliminate partner involvement
- B. Reduce the number of SAP systems
- C. Drive support automation
- D. Ensure predictable implementation and clean core adherence

Answer: D

NEW QUESTION # 30

What ensures that architecture documentation is aligned with business capability goals?

- A. RACI Grid Builder
- B. Lifecycle Milestones
- C. Capability Mapping
- D. Fact Sheet Owners

Answer: C

NEW QUESTION # 31

What are the benefits offered by SAP Cloud ALM for businesses?

(3 correct answers)

- A. It supports only cloud implementation scenarios
- B. It supports process mining with plug & gain
- C. It reduces TCO of the solution landscape
- D. It is instantly available for use as a subscription service
- E. It is available to all customers with Enterprise Support Agreement or cloud contract

Answer: C,D,E

Explanation:

SAP Cloud ALM provides multiple operational and implementation benefits to businesses undergoing transformation. First, it is available to all customers who hold an SAP Enterprise Support Agreement or cloud subscription. This means there are no additional licensing fees, making Cloud ALM a highly accessible lifecycle management platform. Its broad availability encourages consistent adoption across organizations of all sizes.

Second, SAP Cloud ALM is instantly available as a cloud-native subscription service. There is no installation or infrastructure setup required. Customers can begin using Cloud ALM almost immediately after provisioning, accelerating project kickoff and reducing administrative overhead.

Third, one of its major benefits is that it reduces total cost of ownership (TCO) by minimizing on-premise infrastructure requirements and providing standardized, automated tools for monitoring, implementation, testing, and operations. This reduces the need for multiple separate ALM systems and allows customers to centralize lifecycle activities.

Option A is incorrect because process mining with Plug & Gain is a Signavio capability. Option D is incorrect because Cloud ALM supports both cloud and hybrid/on-premise scenarios through integration monitoring and operational support. Therefore, the correct benefits are B, C, and E.

NEW QUESTION # 32

What analysis does SAP Signavio support to compare company performance with peers?

- A. Value discovery
- B. SWOT analysis
- C. Performance benchmarking
- D. Regression modelling

Answer: C

Explanation:

SAP Signavio includes powerful benchmarking tools that allow organizations to compare their business process performance with internal and external peers. This capability, known as performance benchmarking, provides insights into how an organization's process KPIs—such as cycle times, automation rates, exception ratios, throughput, or backlog levels—measure up against industry standards or best-in-class performers. Performance benchmarking helps identify whether processes are lagging behind competitors or operating efficiently relative to market expectations.

Through SAP Signavio Process Insights and Process Intelligence, businesses can analyze large volumes of operational data to pinpoint where bottlenecks occur and identify root causes of inefficiency. Benchmarking goes beyond simple reporting by categorizing processes into performance segments and highlighting improvement potential. These insights are particularly valuable during transformation planning, as they guide prioritization and help justify investment decisions by quantifying the potential value of

change.

Options A, B, and D do not represent benchmarking. Value discovery identifies opportunities, regression modeling is statistical analysis not used in this context, and SWOT is a strategic planning tool unrelated to system process analytics. Thus, performance benchmarking is the correct and recognized approach in SAP Signavio for comparing company performance with peers.

NEW QUESTION # 33

Which of the following are dimensions of the clean core concept?

(3 correct answers)

- A. Configurations
- B. Applications
- C. Processes
- D. Integrations
- E. Operations

Answer: A,C,D

Explanation:

The clean core concept is fundamental to SAP's cloud strategy and governs how organizations should structure their ERP systems to remain flexible, upgradeable, and stable. One key dimension is Configurations

, which must follow SAP-recommended patterns and avoid unnecessary customizations that compromise upgradeability.

Configurations define how the system behaves, and keeping them standardized ensures that the core can remain clean.

A second dimension is Integrations. Clean core principles emphasize using SAP-approved integration patterns, APIs, and event-driven models rather than modifying the underlying system. By handling extensions and integrations through platforms like SAP

Business Technology Platform, organizations avoid invasive changes that would otherwise jeopardize upgrades or system stability.

A third dimension is Processes, referring to the ability to adopt SAP's standard end-to-end processes wherever possible. Aligning with SAP best practices minimizes the need for enhancements in the core system and ensures compatibility with future innovations.

Applications and operations are not part of the formal clean core dimensions; rather, they are broader parts of the overall IT landscape. The clean core dimensions focus specifically on system configuration, integration behavior, and business process alignment—ensuring that SAP systems remain cloud-ready and agile.

NEW QUESTION # 34

.....

As the saying goes, time is the most precious wealth of all wealth. If you abandon the time, the time also abandons you.
