IBM watsonx Generative AI Engineer - Associate Sample Questions (Q75-Q80):

NEW QUESTION # 75

You are fine-tuning the output behavior of a generative AI model in IBM Watsonx for creative content generation. You decide to adjust the temperature parameter to influence the randomness of the model's output.

Which of the following best describes the effect of increasing the temperature value?

- A. Raising the temperature encourages the model to consider less likely tokens, leading to more diverse and creative outputs.
- B. Raising the temperature makes the model more likely to repeat tokens, reducing variability in its responses.
- C. A higher temperature setting reduces the length of the generated output by limiting the number of tokens in each response.

- D. Increasing the temperature makes the model generate more deterministic responses by always selecting the most probable token at each step.

Answer: A

NEW QUESTION # 76

You are tasked with building a Retrieval-Augmented Generation (RAG) system for answering legal questions. The legal documents vary significantly in complexity and structure.

How would you optimize embeddings in this domain to ensure the system retrieves the most relevant documents? (Select two)

- A. Apply dimensionality reduction techniques like PCA to compress embeddings and improve retrieval speed.
- B. Integrate additional metadata (e.g., document date, author) into the embedding representation to improve retrieval.
- C. Use an unsupervised learning approach to generate embeddings, as labeled data is not necessary for improving retrieval performance.
- D. Train a domain-specific embedding model using legal documents to better capture the nuances of legal terminology.
- E. Rely solely on word-level embeddings to capture the meaning of legal phrases and concepts.

Answer: B,D

NEW QUESTION # 77

You are training a generative AI model using IBM's Tuning Studio and want to optimize its performance. You aim to avoid both overfitting and underfitting by carefully selecting the appropriate number of epochs.

Which of the following strategies would best help you set the optimal number of epochs during the tuning process?

- A. Use a single epoch to avoid overfitting
- B. Set the number of epochs equal to the size of the dataset
- C. Set a high number of epochs and use early stopping to determine the optimal point
- D. Gradually increase the number of epochs until the loss on the training set reaches zero

Answer: C

NEW QUESTION # 78

You are optimizing a prompt-tuned LLM for a financial institution's automated assistant. The assistant's main tasks include responding to customer inquiries about account balances, providing detailed transaction histories, and explaining complex financial products.

Which task should be prioritized for prompt-tuning to improve the model's performance in this domain?

- A. Train the model to generate creative financial advice tailored to each customer.
- B. Fine-tune the model for information retrieval tasks related to customer accounts.
- C. Focus on improving the model's ability to generate financial market forecasts.
- D. Optimize for natural language generation to improve customer engagement.

Answer: B

NEW QUESTION # 79

You are tasked with optimizing a generative AI model in IBM watsonx.ai for an NLP-based application.

During the planning stage, which of the following data elements is most important to ensure the model generalizes well to real-world application usage?

- A. A large, diverse dataset with both structured and unstructured data
- B. Only the structured data relevant to specific business rules
- C. Pre-processed data with stop words removed to reduce noise
- D. High-dimensional feature vectors from a small, well-curated dataset

Answer: A
