The Amazon AWS-Certified-Developer-Associate PDF is also regularly reviewed by our experts so that you never miss important changes from Amazon AWS-Certified-Developer-Associate.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample

Questions (Q171-Q176):

NEW QUESTION # 171

An application under development is required to store hundreds of video files. The data must be encrypted within the application prior to storage, with a unique key for each video file.

How should the Developer code the application?

- A. Upload the data to an S3 bucket using server side-encryption with an AWS KMS key.
- B. Use the KMS Encrypt API to encrypt the data. Store the encrypted data key and data.
- C. Use the KMS GenerateDataKey API to get a data key. Encrypt the data with the data key. Store the encrypted data key and data.
- D. Use a cryptography library to generate an encryption key for the application. Use the encryption key to encrypt the data. Store the encrypted data.

Answer: C

Explanation:

Explanation

Refer AWS documentation - KMS GenerateDataKey

Returns a data encryption key that you can use in your application to encrypt data locally.

You must specify the customer master key (CMK) under which to generate the data key. You must also specify the length of the data key using either the field. You must specify one field or the other, but not both. For common key lengths (128-bit and 256-bit symmetric keys), we recommend that you use KeySpec. To perform this operation on a CMK in a different AWS account, specify the key ARN or alias ARN in the value of the KeyId parameter.

This operation returns a plaintext copy of the data key in the field of the response, and an encrypted copy of the data key in the CiphertextBlob field. The data key is encrypted under the CMK specified in the KeyId field of the request.

NEW QUESTION # 172

Your organization uses a VPN to connect to your VPC but must upgrade to a 1-G AWS Direct Connect connection for stability and performance. Your telecommunications provider has provisioned the circuit from your data center to an AWS Direct Connect facility and needs information on how to cross-connect (e.g., which rack/port to connect).

What is the AWS-recommended procedure for providing this information?

- A. Contact an AWS Account Manager and provide your AWS account number, telecommunications company's name, and where you need the Direct Connect connection to terminate.
- B. Create a new connection through your AWS Management Console and wait for an email from AWS with information.
- C. Ask your telecommunications provider to contact AWS through an AWS Partner Channel. Provide your AWS account number.
- D. Create a support ticket. Provide your AWS account number and telecommunications company's name and where you need the Direct Connect connection to terminate.

Answer: D

NEW QUESTION # 173

What AWS products and features can be deployed by Elastic Beanstalk? Choose 3 answers

- A. Elastic Load Balancers
- B. RDS Instances
- C. SQS Queues
- D. Route 53 hosted zones
- E. Elastic IP addresses
- F. Auto scaling groups

Answer: A,B,F

Explanation:

Explanation

<https://aws.amazon.com/elasticbeanstalk/faqs/>

Q: What are the Cloud resources powering my AWS Elastic Beanstalk application? AWS Elastic Beanstalk uses proven AWS features and services, such as Amazon EC2, Amazon RDS, Elastic Load Balancing, Auto Scaling, Amazon S3, and Amazon SNS, to create an environment that runs your application. The current version of AWS Elastic Beanstalk uses the Amazon Linux AMI or the Windows Server 2012 R2 AMI.

NEW QUESTION # 174

A Developer created a new AWS account and must create a scalable AWS Lambda function that meets the following requirements for concurrent execution:

- * Average execution time of 100 seconds
- * 50 requests per second

Which step must be taken prior to deployment to prevent errors?

- A. Implement error handling within the application code
- **B. Contact AWS Support to increase the concurrent execution limits**
- C. Add an event source from Amazon API Gateway to the Lambda function
- D. Implement dead-letter queues to capture invocation errors

Answer: B

Explanation:

Explanation

<https://aws.amazon.com/about-aws/whats-new/2017/05/aws-lambda-raises-default-concurrent-execution-limit/>

NEW QUESTION # 175

A user is running a MySQL RDS instance. The user will not use the DB for the next 3 months. How can the user save costs?

- A. Change the instance size to micro
- B. Pause the RDS activities from CLI until it is required in the future
- **C. Create a snapshot of RDS to launch in the future and terminate the instance now**
- D. Stop the RDS instance

Answer: C

Explanation:

The RDS instances unlike the AWS EBS backed instances cannot be stopped or paused.

The user needs to take the final snapshot, terminate the instance and launch a new instance in the future from that snapshot.

NEW QUESTION # 176

.....

The pass rate is 98.75% for AWS-Certified-Developer-Associate learning materials, and we will help you pass the exam just one time if you choose us. In order to build up your confidence for AWS-Certified-Developer-Associate training materials, we are pass guarantee and money back guarantee, if you fail to pass the exam, we will give you full refund. In addition, you can receive the download link and password within ten minutes for AWS-Certified-Developer-Associate Training Materials, if you don't receive, you can contact with us, and we will solve this problem for you immediately. We offer you free update for 365 days for you, and the update version for AWS-Certified-Developer-Associate exam materials will be sent to your email automatically.
