Once you have put all your effort, and investment and prepared well then you will be in a position to pass the Salesforce Certified Data Architect Data-Architect Certification Exam. But once you get success in the Salesforce Certified Data Architect Data-Architect test you'll be eligible to avail all the personal and professional benefits associated with Salesforce Certified Data Architect Data-Architect certification.

Salesforce Certified Data Architect Sample Questions (Q125-Q130):

NEW QUESTION # 125

Universal Containers (UC) has an open sharing model for its Salesforce users to allow all its Salesforce internal users to edit all contacts, regardless of who owns the contact. However, UC management wants to allow only the owner of a contact record to delete that contact. If a user does not own the contact, then the user should not be allowed to delete the record. How should the architect approach the project so that the requirements are met?

- A. Set the Sharing settings as Public Read Only for the Contact object.
- B. Create a validation rule on the Contact object to check if the current user is not the owner.
- C. Set the profile of the users to remove delete permission from the Contact object.
- **D. Create a "before delete" trigger to check if the current user is not the owner.**

Answer: D

NEW QUESTION # 126

NTO has been using salesforce for sales and service for 10 years. For the past 2 years, the marketing group has noticed a raise from 0 to 35 % in returned mail when sending mail using the contact information stored in salesforce. Which solution should the data architect use to reduce the amount of returned mails?

- A. Delete contacts when the mail is returned to save postal cost to NTO.
- B. Email all customer and asked them to verify their information and to call NTO if their address is incorrect.
- C. Have the sales team to call all existing customers and ask to verify the contact details.
- **D. Use a 3rd-party data source to update contact information in salesforce.**

Answer: D

Explanation:

Using a third-party data source to update contact information in Salesforce is the best solution to reduce the amount of returned mails. This way, the data architect can ensure that the contact information is accurate and up-to-date without relying on manual verification or deletion of contacts

NEW QUESTION # 127

Northern Trail Outfitters is concerned because some of its data is sensitive and needs to be identified for access. What should be used to provide ways to filter and identify the sensitive data?

- A. Define data grouping metadata.
- **B. Define data classification metadata.**
- C. Implement field-level security.
- D. Custom checkbox denoting sensitive data.

Answer: B

NEW QUESTION # 128

Universal Containers (UC) has an Application custom object, which has tens of millions of records created in the past 5 years. UC needs the last 5 years of data to exist in Salesforce at all times for reporting and queries. UC is currently encountering performance issues when reporting and running queries on this Object using date ranges as filters. Which two options can be used to improve report performance?

- A. Add custom indexes to all fields on Application without a standard index.
- B. Run multiple reports to get different pieces of the data and combine them.
- **C. Add custom indexes to the Date fields used for filtering the report.**
- **D. Ask support to create a skinny table for Application with the necessary reporting fields.**

Answer: C,D

Explanation:

Ask support to create a skinny table for Application with the necessary reporting fields. This is an option that can improve report performance by creating a custom table that contains frequently used fields and copies their values from standard or custom objects. Skinny tables are kept in sync with their source tables and are used in place of them for reports and queries⁴. Add custom indexes

to the Date fields used for filtering the report. This is another option that can improve report performance by creating custom indexes on fields that are often used as filters or join conditions in reports and queries. Custom indexes can speed up data retrieval and reduce query execution time

NEW QUESTION # 129

Universal Containers (UC) needs to run monthly and yearly reports on opportunities and orders for sales reporting. There are 5 million opportunities and 10 million orders. Sales users are complaining that the report will regularly timeout.

What is the fastest and most effective way for a data architect to solve the time-out issue?

- A. Extract opportunity and order data from Salesforce, and use a third-party reporting tool to run reports outside of Salesforce.
- B. Create custom fields on opportunity, and copy data from order into those custom fields and run all reports on Opportunity object.
- C. Create an aggregate custom object that summarizes the monthly and yearly values into the required format for the required reports.
- D. Create a skinny table in Salesforce, and copy order and opportunity fields into the skinny table and create the required reports on it.

Answer: C

NEW QUESTION # 130
