Dump AB-730 Torrent & Latest AB-730 Exam Questions Vce

We are all well aware that a major problem in the industry is that there is a lack of quality study materials. Our AB-730 braindumps provides you everything you will need to take a certification examination. Details are researched and produced by AB-730 Dumps Experts who are constantly using industry experience to produce precise, logical verify for the test. You may get AB-730 exam dumps from different web sites or books, but logic is the key.

Microsoft AI Business Professional Sample Questions (Q19-Q24):

NEW QUESTION # 19

You create a Microsoft 365 Copilot notebook and add a file named Process.docx from a local folder.

Yesterday, you updated Process.docx in the local folder.
What will occur when you chat in the notebook?

- A. The chat will reference both versions of Process.docx.
- B. The chat will reference the most recent version of Process.docx.
- **C. The chat will reference only the original version of Process.docx.**

Answer: C

Explanation:

When you upload a local file to a Microsoft 365 Copilot notebook, Copilot typically creates a copy of that file in your OneDrive for cloud-based processing. Consequently, the chat in the notebook will reference the uploaded version of the file, not the updated local file, meaning changes made locally after the upload will not be reflected in the chat session.

Key details regarding this behavior include:

Version Reference: The notebook uses a "snapshot" or copy of the file at the moment of upload.

Storage Location: Uploaded local files are stored in your OneDrive, essentially creating two separate files—one local and one in the cloud.

Actionable Advice: If you need Copilot to reference the most current version, you must re-upload the updated file.

Alternatives: Linking to files already in OneDrive (instead of uploading local files) allows Copilot to reference the latest version in real-time.

NEW QUESTION # 20

You sign in to the Microsoft 365 Copilot app by using your work account as shown in the following exhibit

□ A colleague tells you that when they open the Microsoft 365 Copilot app, they have access to the Researcher agent. You need to access to the Researcher agent.
What should you do?

- A. Request a Microsoft 365 Copilot license from an administrator.
- **B. Select Explore agents and then search for Researcher.**
- C. Sign in to the Copilot app by using a personal account
- D. From Microsoft Edge, use your work account to sign in to <https://copilot.microsoft.com>.

Answer: B

Explanation:

In Microsoft 365 Copilot, agents such as Researcher are accessed through the Agents experience within the Copilot app. If the user interface does not immediately display a specific agent, the correct action is to browse or search the available agents catalog. The exhibit shows the left navigation pane with an Explore agents option.

According to Microsoft AI Business Professional guidance, built-in and custom agents can be discovered and enabled through the Explore agents section. If the user already has the appropriate Copilot license and is signed in with their work account, there is no need to switch accounts or request another license.

Signing in through a browser does not change feature availability, and using a personal account would remove access to organizational features. Therefore, to access the Researcher agent, you should select Explore agents and search for Researcher.

NEW QUESTION # 21

Hotspot Question

Select the answer that correctly completes the sentence.

□

Answer:

Explanation:

□

NEW QUESTION # 22

You are using Microsoft 365 Copilot to enhance your productivity in Microsoft Teams.

Which two tasks can you achieve by using Copilot in Teams? Each correct answer presents a complete the solution.
NOTE: Each correct selection is worth one point.

- A. Mute and unmute participants in a meeting based on their location.
- B. Create a custom background and add the background to your video calls.
- C. Create a meeting summary, including key decisions and action items.
- D. Draft a response to a channel message based on the context of the conversation.

Answer: C,D

Explanation:

Copilot in Microsoft Teams is designed to help users work faster by summarizing meeting content and assisting with message composition in chats and channels. Microsoft guidance highlights that Copilot can synthesize what was discussed in a meeting by generating a structured recap that includes key points, decisions, and action items. This directly matches option C . Copilot can also help you respond more quickly in Teams conversations by drafting replies grounded in the context of the existing chat or channel thread, which matches option D .

Options A and B are not Copilot capabilities. Muting and unmuting participants is a meeting control function handled by Teams meeting roles and settings, and it is not automatically driven by Copilot based on participant location. Creating custom backgrounds is a Teams visual feature (and can involve Designer or image tools), but it is not a Copilot-in-Teams productivity function for summarization or drafting based on conversation context.

Therefore, the two tasks you can achieve using Copilot in Teams are generating meeting summaries with decisions and action items, and drafting responses to channel messages based on conversation context.

NEW QUESTION # 23

You run a prompt by using the Researcher agent in Microsoft 365 Copilot.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

You can continue the conversation in Copilot in Word.

The answer: Yes

You can continue the conversation in Copilot for Teams.

The answer: Yes

You can continue the conversation in Copilot in Outlook.

The answer: Yes

Microsoft 365 Copilot provides cross-application continuity across supported Microsoft 365 apps. When using the Researcher agent, users can continue or extend their work within applications such as Word, Teams, and Outlook.

In Word, users can incorporate research results directly into drafted documents, enabling seamless transition from research to content creation. In Teams, Copilot supports contextual collaboration by allowing insights from research to inform meetings or chats. In Outlook, findings can be referenced to compose informed and data-driven communications.

This interoperability is enabled by Microsoft Graph integration, which allows Copilot to securely access and contextualize enterprise data across applications while respecting organizational permissions.

These capabilities demonstrate effective management of prompts and conversations by maintaining workflow continuity, enhancing productivity, and supporting enterprise-grade collaboration powered by generative AI.

NEW QUESTION # 24

.....

As we all know, it is difficult for you to prepare a AB-730 exam by yourself. You will feel confused about some difficult knowledge. Now, you are fortunate enough to purchase our AB-730 study questions. Our study materials are compiled by professional experts. They have researched the annual Real AB-730 Exam for many years. So once you buy our study materials, you will save a lot of troubles.
