You will face plenty of options in your whole lives. Sometimes, you must decisively abandon some trivial things, and then you can harvest happiness and fortunes. Now, our CCDAK guide materials just need to cost you less spare time, then you will acquire useful skills which may help you solve a lot of the difficulties in your job. Besides, our CCDAK Exam Questions will help you pass the exam and get the certification for sure.

The CCDAK certification exam is a valuable credential for developers who work with Kafka. It not only validates their knowledge and skills but also enhances their career opportunities. The CCDAK certification is recognized by the industry and can help developers stand out in the job market. By investing time and effort in preparing for the CCDAK certification exam, developers can take their Kafka expertise to the next level.

The CCDAK certification exam is a hands-on exam, where developers are required to complete a series of tasks in a Kafka cluster. The tasks include creating topics, producing and consuming messages, configuring Kafka brokers, and writing Kafka applications. CCDAK Exam is designed to test developers' ability to apply their knowledge of Kafka concepts in real-world scenarios and to ensure that they have the necessary skills to build and manage Kafka applications.

## CCDAK actual study guide & CCDAK training torrent prep

The Itcertmaster aids students in passing the test on their first try by giving them the real questions in three formats, 24/7 support team assistance, free demo, up to 1 year of free updates, and the satisfaction guarantee. As a result of its persistent efforts in providing candidates with actual CCDAK Exam Questions, Itcertmaster has become one of the best platforms to prepare for the Confluent CCDAK exam successfully. One must prepare with Itcertmaster exam questions if one wishes to pass the CCDAK exam on their first attempt.

The CCDAK certification exam covers a wide range of topics, including Kafka architecture, Kafka core concepts, Kafka deployment, Kafka API, Kafka Connect, Kafka Streams, and Confluent Cloud. CCDAK exam consists of 60 multiple-choice questions, which must be completed within 90 minutes. To pass the exam, candidates must score 70% or higher. The CCDAK certification is valid for two years, after which the candidate must recertify to maintain their certification status. Achieving the CCDAK Certification demonstrates an individual's ability to build scalable, fault-tolerant, and high-performance streaming applications using Apache Kafka, making them a valuable asset to any organization working with data streaming technologies.

## Confluent Certified Developer for Apache Kafka Certification Examination Sample Questions (Q86-Q91):

### NEW QUESTION # 86

Which two statements about Kafka Connect Single Message Transforms (SMTs) are correct?  
(Select two.)

- A. Masking data is a good example of an SMT.
- B. SMTs are often used to join multiple records from a source data system into a single Kafka record.
- C. SMT functionality is included within Kafka Connect converters.
- D. Multiple SMTs can be chained together and act on source or sink messages.

**Answer: A,D**

Explanation:

SMTs (Single Message Transforms) are lightweight transformations applied to individual messages as they pass through Kafka Connect.

Chaining SMTs: You can apply multiple SMTs in sequence by defining them in order in the connector config.

Masking or modifying fields is a common use case (e.g., redacting sensitive data).

From Kafka Connect Documentation:

"Single Message Transforms (SMTs) are applied to individual messages. You can chain multiple SMTs together." SMTs do not perform joins (B is incorrect).

Converters and SMTs are separate concerns (D is incorrect).

Reference: Kafka Connect Transformations Guide

### NEW QUESTION # 87

The rule "same key goes to the same partition" is true unless...

- A. the number of partition changes
- B. the number of producer changes
- C. the number of kafka broker changes
- D. the replication factor changes

**Answer: A**

Explanation:

Increasing the number of partition causes new messages keys to get hashed differently, and breaks the guarantee "same keys goes to the same partition". Kafka logs are immutable and the previous messages are not re-shuffled.

### NEW QUESTION # 88

(You want to enrich the content of a topic by joining it with key records from a second topic.

The two topics have a different number of partitions.

Which two solutions can you use?

Select two.)

- A. Use a KStream-KTable join; Kafka Streams will automatically repartition the topics to satisfy the co-partitioning constraint.
- B. Create as many Kafka Streams application instances as the maximum number of partitions of the two topics and use a KStream-KTable join.
- C. Repartition one topic to a new topic with the same number of partitions as the other topic (co-partitioning constraint) and use a KStream-KTable join.
- D. Use a GlobalKTable for one of the topics where data does not change frequently and use a KStream-GlobalKTable join.

**Answer: C,D**

Explanation:

The Apache Kafka Streams documentation defines a co-partitioning requirement for KStream-KTable and KStream-KStream joins. Both input topics must have the same number of partitions and the same key partitioning strategy.

One valid solution is to use a GlobalKTable (Option A). A GlobalKTable is fully replicated to every Kafka Streams instance, removing the co-partitioning requirement. This approach is recommended when the reference data is relatively small and changes infrequently.

Another valid solution is to repartition one topic so that both topics have the same number of partitions (Option B). Kafka Streams provides repartition topics specifically for this purpose, allowing proper KStream-KTable joins.

Option C does not resolve the partition mismatch, as increasing instances does not change partitioning. Option D is incorrect because Kafka Streams does not automatically repartition both topics for joins; repartitioning must be explicitly configured.

Therefore, the correct and officially supported solutions are using a GlobalKTable and explicitly repartitioning one topic.

### NEW QUESTION # 89

In the Kafka consumer metrics it is observed that fetch-rate is very high and each fetch is small. What steps will you take to increase throughput?

- A. Increase fetch.max.bytes
- B. Increase fetch.max.wait
- C. Decrease fetch.max.bytes
- **D. Increase fetch.min.bytes**
- E. Decrease fetch.min.bytes

**Answer: D**

Explanation:

This will allow consumers to wait and receive more bytes in each fetch request.

### NEW QUESTION # 90

What is not a valid authentication mechanism in Kafka?

- A. SSL
- B. SASL/SCRAM
- C. SASL/GSSAPI
- **D. SAML**

**Answer: D**

Explanation:

Learn more about security here <https://kafka.apache.org/documentation/#security>
