## Sample Materials GH-200 All-in-One Exam Guide

The customer is God. GH-200 learning dumps provide all customers with high quality after-sales service. After your payment is successful, we will dispatch a dedicated IT staff to provide online remote assistance for you to solve problems in the process of download and installation. During your studies, GH-200 study tool will provide you with efficient 24-hour online services. You can email us anytime, anywhere to ask any questions you have about our GH-200 Study Tool. At the same time, our industry experts will continue to update and supplement GH-200 test question according to changes in the exam outline, so that you can concentrate on completing the review of all exam content without having to pay attention to changes in the outside world.

## Microsoft GitHub Actions Sample Questions (Q18-Q23):

### NEW QUESTION # 18

As a developer, how should you enable step debug logging for a workflow?

- A. Use the `--actions-step-debug` flag when calling the workflow.
- B. Set the `ACTIONS_STEP_DEBUG` secret or variable at the repository level to true.
- C. Include the following code block in your workflow:  
env:  
ACTIONS\_STEP\_DEBUG: true
- D. Include the following code block in your workflow:  
defaults:  
ACTIONS\_STEP\_DEBUG: true

**Answer: B**

Explanation:

Enabling debug logging

If the workflow logs do not provide enough detail to diagnose why a workflow, job, or step is not working as expected, you can enable additional debug logging.

Enabling step debug logging

Step debug logging increases the verbosity of a job's logs during and after a job's execution.

1. To enable step debug logging, set the following secret or variable in the repository that contains the workflow:

ACTIONS\_STEP\_DEBUG to true. If both the secret and variable are set, the value of the secret takes precedence over the variable.

2. After setting the secret or variable, more debug events are shown in the step logs.

Reference:

<https://docs.github.com/en/actions/how-tos/monitor-workflows/enable-debug-logging>

### NEW QUESTION # 19

In which of the following scenarios should you use self-hosted runners? (Each correct answer presents a complete solution. Choose two.)

- **A. when a workflow job needs to install software from the local network**
- B. when you want to use macOS runners
- C. when the workflow jobs must be run on Windows 10
- **D. when jobs must run for longer than 6 hours**
- E. when GitHub Actions minutes must be used for the workflow runs

**Answer: A,D**

Explanation:

[B] You can use self-hosted runner to run more than 6 hours job.

Self-hosted runners give you the opportunity to persist whatever you like for your jobs and not be subject to the six-hour time-out in hosted virtual environments.

[C] Give you more control of hardware, operating system, and software tools than GitHub-hosted runners provide.

All runners can run Linux, Windows, or macOS.

<https://docs.github.com/en/enterprise-cloud@latest/admin/managing-github-actions-for-your-enterprise/getting-started-with-github-actions-for-your-enterprise/getting-started-with-self-hosted-runners-for-your-enterprise>

<https://docs.github.com/en/enterprise-cloud@latest/actions/concepts/runners/self-hosted-runners>

### NEW QUESTION # 20

What menu options in a repository do you need to select in order to use a starter workflow that is provided by your organization?

- **A. Actions > New workflow**
- B. Actions > Load workflow
- C. Workflow > New workflow
- D. Workflow > Load workflow

**Answer: A**

Explanation:

To use a starter workflow provided by your organization, you need to go to the Actions tab in the repository and select New workflow. This option allows you to either create a new workflow or select from a list of available workflow templates, including starter workflows provided by your organization.

### NEW QUESTION # 21

How should you print a debug message in your workflow?

- **A. echo "debug\_message=Set variable myVariable to true" >> &GITHUB\_OUTPUT**

- B. echo "::debug::Set variable myVariable to true"
- C. echo "Set variable MyVariable to true" >> \$DEBUG\_MESSAGE
- D. echo "::add-mask::Set variable myVariable to true"

**Answer: B**

Explanation:

Example: Setting a debug message

echo "::debug::Set the Octocat variable"

Reference:

<https://docs.github.com/en/actions/reference/workflows-and-actions/workflow-commands>

## NEW QUESTION # 22

You installed specific software on a Linux self-hosted runner. You have users with workflows that need to be able to select the runner based on the identified custom software. Which steps should you perform to prepare the runner and your users to run these workflows? (Choose two.)

- A. Add the label custom-software to the runner.
- B. Inform users to identify the runner based on the group.
- C. Add the label linux to the runner.
- D. Create the group custom-software-on-linux and move the runner into the group.
- E. Configure the webhook and network to enable GitHub to trigger workflow.

**Answer: A,B**

Explanation:

Once the runner is properly configured and labeled, users should be informed to select the specific runner by identifying the label or group name when defining the runner in their workflows.

Adding a custom label (like custom-software) to the runner makes it easier for users to select the runner in their workflows by using the runs-on key, which allows them to choose this specific runner based on its label.

## NEW QUESTION # 23

.....

We respect private information of our customers, and if you purchase GH-200 exam dumps from us, your personal information such as name and email address will be protected well. Once the order finishes, your information will be concealed. We won't send junk email to you. Besides, GH-200 exam braindumps of us offer you free update for you, and we recommend you to have a try before buying, therefore you can have a better understanding of what you are going to buy. We have online service stuff, and if you have any questions about GH-200 Exam Dumps, just contact us.
