

# DAA-C01 Valid Practice Questions - DAA-C01 Reliable Test Tips

BTW, DOWNLOAD part of Pass4sures DAA-C01 dumps from Cloud Storage: <https://drive.google.com/open?id=1She9jYwU0n343z6st8ctb29BN4eJQjt>

For candidates who are going to buy the DAA-C01 questions and answers online, they pay more attention to the prospect of personal information. We respect the privacy of our customers. If you buy the DAA-C01 exam dumps from us, your personal information such as your email address or name will be protected well. Once the order finishes, the information about you will be concealed. In addition, DAA-C01 Questions and answers are revised by professional specialists, therefore they are high-quality, and you can pass the exam by using them.

Here, we want to describe the DAA-C01 PC test engine for all of you. DAA-C01 PC test engine is suitable for all the windows system, which is very convenient to be installed. Besides, it does not need to install any assistant software. What's more, our DAA-C01 PC test engine is virus-free and safe which can be installed on your device. With the Snowflake DAA-C01 simulate test, you can have a test just like you are in the real test environment. Dear, everyone, practice more frequently, you will success finally.

## DAA-C01 Reliable Test Tips | Interactive DAA-C01 Questions

Windows computers support the desktop practice test software. Pass4sures has a complete support team to fix issues of Snowflake DAA-C01 PRACTICE TEST software users. Pass4sures practice tests (desktop and web-based) produce score report at the end of each attempt. So, that users get awareness of their SnowPro Advanced: Data Analyst Certification Exam (DAA-C01) preparation status and remove their mistakes.

## Snowflake SnowPro Advanced: Data Analyst Certification Exam Sample Questions (Q120-Q125):

### NEW QUESTION # 120

A logistics company needs to determine which warehouses are within a 50km radius of a new distribution center. The warehouse locations are stored in a table 'WAREHOUSES' with columns 'WAREHOUSE ID' (INT), (GEOGRAPHY) and the distribution center's location is stored in a variable of type GEOGRAPHY. Which query will efficiently identify all warehouses within the specified radius, returning the 'WAREHOUSE ID and distance in kilometers?

- A. Option B
- B. Option A
- C. Option C

- D. Option E
- E. Option D

**Answer: D**

Explanation:

The correct answer uses 'ST\_DWITHIN' with the correct parameters and unit. 'ST\_DWITHIN(LOCATION, @distribution\_center, 50000)' correctly filters the warehouses based on the 50km (50000 meters) radius. ST\_DISTANCE calculates the distance in meters, which is then converted to kilometers by dividing by 1000. The warehouse location should come first followed by the distribution centre in the DWITHIN' Function.

#### NEW QUESTION # 121

You are responsible for a Snowflake data pipeline that loads data from various external sources into a data warehouse. You have implemented Snowpipe for continuous data ingestion from AWS S3. One of your data sources is known to occasionally produce corrupted data files. You need to design a resilient pipeline that can handle these corrupted files without halting the entire data loading process and allows for the identification and quarantine of these files for further investigation. Assume you have a table called 'RAW DATA' and you are using a file format 'MY CSV FORMAT'. Select TWO actions which best address this situation:

- A. Set 'ON\_ERROR = 'SKIP\_FILE' in the 'COPY INTO' statement used by Snowpipe. This setting will skip entire files that contain errors, preventing them from being loaded into the table.
- B. Create a separate stream on the 'RAW DATA' table that filters for records with errors and then move these erroneous records into a quarantine table using a task. Implement ERROR=CONTINUE on the Copy Statement.
- C. Configure Snowpipe's 'ERROR INTEGRATION' to log details of files that fail during ingestion, including the error messages. Then, set ERROR=CONTINUE on the Copy Statement. This requires an external stage for the error logs. In addition, create a separate task that queries the ERROR INTEGRATION external stage and moves the corrupt files into a separate quarantine bucket.
- D. Implement a pre-processing step using a Snowflake task to validate the data in each file before it's loaded into the 'RAW\_DATA' table using a 'COPY INTO' statement. The Task would then move files failing validation to a quarantine bucket.
- E. □

**Answer: C,D**

Explanation:

Option B directly addresses the requirement for a resilient pipeline by utilizing 'ERROR INTEGRATION' to log errors and quarantine corrupt files. Setting ON\_ERROR to CONTINUE avoids pipeline interruption, and creating a task to query the error stage and move files to a quarantine bucket achieves the desired outcome. Option C would be the 2nd best option because it provides for pre-processing and validation, which avoids loading the corrupted records into the RAW\_DATA table in the first place. Option A only skips the file and doesn't log the errors or quarantine the file. Option D creates a stream on the RAW DATA table, but we would like to avoid writing erroneous records to the RAW DATA table in the first place. 'VALIDATE' only checks the existing data, so it would not solve any problems in Data Load.

#### NEW QUESTION # 122

How does operationalizing data contribute to maintaining reports and dashboards for business requirements?

- A. It limits data accessibility for effective dashboard usage.
- B. Operationalizing data complicates dashboard sharing.
- C. It restricts data updates, affecting dashboard accuracy.
- D. Operationalizing data ensures consistent and efficient usage.

**Answer: D**

Explanation:

Operationalizing data ensures consistent and efficient usage of reports and dashboards.

#### NEW QUESTION # 123

How do materialized views differ from secure views in data analysis?

- A. Materialized views restrict data access for improved security.
- **B. Secure views precompute data, unlike materialized views.**
- C. Materialized views offer enhanced data security while allowing selective data access.
- D. Secure views provide precomputed snapshots, unlike materialized views.

**Answer: B**

Explanation:

Secure views offer enhanced data security without precomputing data, distinguishing them from materialized views.

#### NEW QUESTION # 124

When designing a data collection system, what factors should be considered when assessing how often data needs to be collected? (Select all that apply)

- A. Data source availability
- B. Data collection tool limitations
- **C. Volume of data**
- **D. Business requirements**

**Answer: C,D**

Explanation:

Assessing data collection frequency involves considering business requirements and the volume of data necessary for analysis.

#### NEW QUESTION # 125

.....

We offer you free update for 365 days after purchasing DAA-C01 study guide, so that you don't need to spend extra money on the update version, and latest version for DAA-C01 exam materials will be sent to your email address automatically. In addition, DAA-C01 exam dumps are compiled by professional experts who are quite familiar with the exam center, therefore if you choose us, you can get the latest information for the exam timely. DAA-C01 Exam Materials are also high quality, we have a professional team to examine the answers on a continuous basis, and therefore, you can use them at ease.
