#### NEW QUESTION # 88

A Data Analyst has the following chart that shows the cumulative volume of sales from various dates.

The analyst wants the months to appear as shown in the following chart.

What should the analyst do?

- **A. Convert the date to Continuous**
- B. Change the Sort Order
- C. Convert the date to Exact Date
- D. Convert the date to Attribute

**Answer: A**

#### NEW QUESTION # 89

You need to change the values of a dimension without creating a new field.

What should you do?

- A. Transforms the fields
- **B. Create aliases**
- C. Rename the fields
- D. Create groups

**Answer: B**

Explanation:

You can create aliases for the members of a dimension by right-clicking the dimension in the Data pane or in the view and selecting Aliases. This changes how the values are displayed in the view, but not the underlying data. For example, you can create an alias for "Central" as "Midwest".

In Tableau, aliases can be used to change the way dimension members appear without altering the underlying data. This is useful for display purposes and does not create a new field within the dataset.

#### NEW QUESTION # 90

You have the following bar chart.

You want the chart to appear as shown in the Mowing exhibit.

What should you add?

- **A. A reference line**
- B. A reference band
- C. A distribution band
- D. An average line

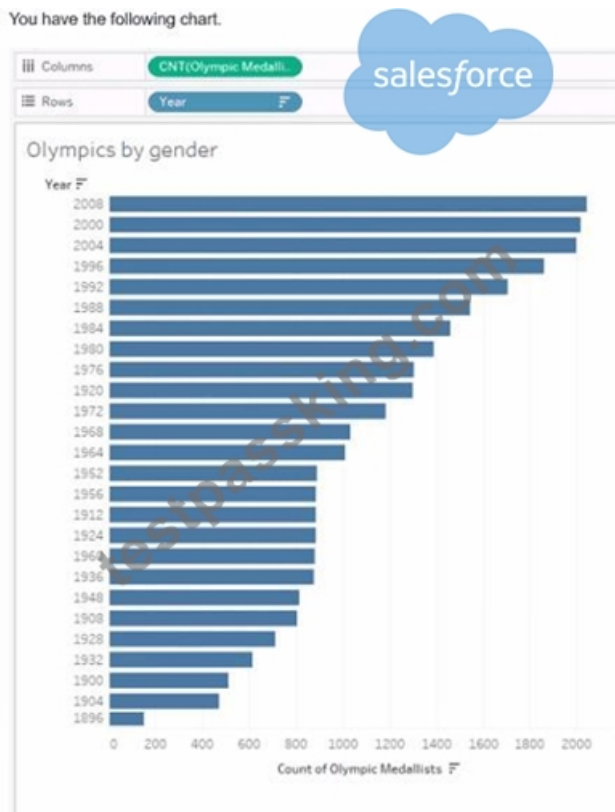

**Answer: A**

Explanation:

A reference line is used in Tableau to display a line at a constant value or a computed value such as an average, median, minimum, or maximum in a bar chart. In this case, adding a reference line would allow you to show the median, upper quartile, and lower quartile, which corresponds to the changes shown in the bar chart.

#### NEW QUESTION # 91

You need the top 10 values to appear in a different color. The top 10 values must be colored dynamically. What should you do?
